

## Clinical trial results:

### An Open-Label Study of Regorafenib in Combination with Pembrolizumab in Patients with Advanced or Metastatic Hepatocellular Carcinoma (HCC) after PD-1/PD-L1 Immune Checkpoint Inhibitors Summary

EudraCT number	2020-003555-16
Trial protocol	FR DE IT ES
Global end of trial date	23 April 2024

#### Results information

Result version number	v1 (current)
This version publication date	10 April 2025
First version publication date	10 April 2025

#### Trial information

##### Trial identification

Sponsor protocol code	BAY73-4506/21469
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04696055
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Bayer AG
Sponsor organisation address	Kaiser Wilhelm Allee, Leverkusen, Germany, D-51368
Public contact	Therapeutic Area Head, Bayer AG, +49 30 300139003, clinical-trials-contact@bayer.com
Scientific contact	Therapeutic Area Head, Bayer AG, +49 30 300139003, clinical-trials-contact@bayer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 April 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 April 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the objective anti-tumor activity of regorafenib in combination with pembrolizumab as a second line treatment for advanced HCC

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects (or their legally authorized representative according to local legislation). Participating subjects (or their legally authorized representative according to local legislation) signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 February 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	9 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 63
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	United States: 25
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Israel: 6
Country: Number of subjects enrolled	Japan: 5
Country: Number of subjects enrolled	Korea, Republic of: 16
Worldwide total number of subjects	136
EEA total number of subjects	84

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	57
From 65 to 84 years	78
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted between 03 February 2021 (first subject first visit) and 23 April 2024 (last subject last visit) at multi-centers in 9 countries.

### Pre-assignment

Screening details:

A total of 136 participants were screened, of whom 41 were screening failures. A total of 95 participants were assigned to treatment.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Regorafenib + Pembro [1L: Atezolizumab + Bevacizumab]

Arm description:

Cohort 1 with subjects after one systemic line of therapy consisting of atezolizumab plus bevacizumab treatment combination only. Pembrolizumab 400 mg was administered as an intravenous (IV) infusion every 6 weeks. Regorafenib was given orally at a starting dose of 90 mg once daily for 3 weeks of every 4 weeks (i.e., 3 weeks on, 1 week off). If the starting dose of 90 mg daily was well tolerated the dose was escalated to 120 mg starting after the first 4-week cycle of regorafenib.

Arm type	Experimental
Investigational medicinal product name	Regorafenib
Investigational medicinal product code	BAY 73-4506
Other name	Stivarga
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

At a starting dose of 90 mg once daily for 3 weeks of every 4 weeks (i.e., 3 weeks on, 1 week off), oral. If the starting dose of 90 mg daily was well tolerated the dose was escalated to 120 mg starting after the first 4-week cycle.

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	MK-3475
Other name	Keytruda
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

400 mg, IV infusion, every 6 weeks

<b>Arm title</b>	Regorafenib + Pembro [1L: Any other IO containing treatment]
------------------	--

Arm description:

Cohort 2 with subjects after one systemic line of therapy consisting of any PD-1/PD-L1 immune oncology (IO) containing first line treatment (excluding atezolizumab with or without bevacizumab) in monotherapy or combination regimens. Pembrolizumab 400 mg was administered as an IV infusion every 6 weeks. Regorafenib was given orally at a starting dose of 90 mg once daily for 3 weeks of every 4 weeks (i.e., 3 weeks on, 1 week off). If the starting dose of 90 mg daily was well tolerated the dose was escalated to 120 mg starting after the first 4-week cycle of regorafenib.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	MK-3475
Other name	Keytruda
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

400 mg, IV infusion, every 6 weeks

Investigational medicinal product name	Regorafenib
Investigational medicinal product code	BAY 73-4506
Other name	Stivarga
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

At a starting dose of 90 mg once daily for 3 weeks of every 4 weeks (i.e., 3 weeks on, 1 week off), oral. If the starting dose of 90 mg daily was well tolerated the dose was escalated to 120 mg starting after the first 4-week cycle.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Regorafenib + Pembro [1L: Atezolizumab + Bevacizumab]	Regorafenib + Pembro [1L: Any other IO containing treatment]
Started	68	27
Completed	0	0
Not completed	68	27
Physician decision	3	-
Subject Decision	1	2
Adverse Event	10	2
Progressive Disease - Radiological Progression	42	20
Death	4	-
Unspecified	7	2
Progressive Disease - Clinical Progression	1	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 136 subjects were screened, of whom 41 were screening failures. Only 95 subjects were assigned to treatment.

## Baseline characteristics

### Reporting groups

Reporting group title	Regorafenib + Pembro [1L: Atezolizumab + Bevacizumab]
-----------------------	---

Reporting group description:

Cohort 1 with subjects after one systemic line of therapy consisting of atezolizumab plus bevacizumab treatment combination only. Pembrolizumab 400 mg was administered as an intravenous (IV) infusion every 6 weeks. Regorafenib was given orally at a starting dose of 90 mg once daily for 3 weeks of every 4 weeks (i.e., 3 weeks on, 1 week off). If the starting dose of 90 mg daily was well tolerated the dose was escalated to 120 mg starting after the first 4-week cycle of regorafenib.

Subject analysis set title	Full Analysis Set (FAS)
----------------------------	-------------------------

Subject analysis set type	Full analysis
---------------------------	---------------

Subject analysis set description:

All subjects who took at least 1 dose of study intervention were included in the efficacy and safety evaluation

### Primary: Overall response rate (ORR) per RECIST 1.1 by central assessment

End point title	Overall response rate (ORR) per RECIST 1.1 by central assessment <sup>[1]</sup>
-----------------	---

End point description:

Overall response rate (ORR) is defined as the percentage of subjects with best overall response of confirmed complete response (CR) or partial response (PR). ORR per RECIST 1.1 by independent central assessment is reported). RECIST 1.1: response evaluation criteria in solid tumors version 1.1

End point type	Primary
----------------	---------

End point timeframe:

Up to 15 months. Data up to 38 months are now available and are also reported for full transparency.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the nature of this trial, only descriptive statistics were performed. Neither confirmatory nor exploratory inferential statistical analyses were pre-specified. Thus those analyses were not performed.

End point values	Regorafenib + Pembro [1L: Atezolizumab + Bevacizumab]	Regorafenib + Pembro [1L: Any other IO containing treatment]

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

After start of first study intervention administration until 30 days after administration of any study intervention. Serious adverse events were collected for 90 days after the last dose of pembrolizumab unless a new anti-cancer therapy had been initiated

Adverse event reporting additional description:

Adverse event reporting for the the deaths (all causes) considers all deaths that occurred at any time during the study before the last contact

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 June 2021	Key modifications were: • Duration of contraception use was clarified to align with wording of Investigator's Brochure (IB). • Exclusion criteria and dose modification sections adapted to align with wording from regorafenib Summary of Product Characteristics (SmPC). • Guidance for regorafenib non-hematologic toxicities and liver toxicities added. • Guidance for Grade 3 immune-related adverse events (irAEs) added. • HCV serotyping added if genotyping was not available for hepatitis C virus (HCV) infection.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
