

Clinical trial results:

A randomized, four-arm, canakinumab placebo-controlled, participant, investigator and sponsor-blinded study investigating the safety, tolerability and efficacy of intra-articular canakinumab followed by intra-articular LNA043 in patients with knee osteoarthritis

Summary

EudraCT number	2020-003631-21
Trial protocol	DE CZ HU EE LT LV
Global end of trial date	24 June 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 June 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	24 June 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to assess the ability of LNA043 to regenerate articular cartilage tissue in patients with symptomatic knee osteoarthritis with inflammation, after injection of placebo or canakinumab intra articular and the co-primary objective is the ability of canakinumab to reduce pain and/or inflammation in patients with symptomatic knee osteoarthritis with inflammation.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	Estonia: 1
Country: Number of subjects enrolled	Latvia: 1
Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	United States: 14
Worldwide total number of subjects	23
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in 11 investigative sites in 6 countries.

Pre-assignment

Screening details:

The study consisted of 4 screening visits (Screening 1-4), of which Screening 2 and 4 could be performed remotely.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo to ACZ885+LNA043 40 mg
------------------	--------------------------------

Arm description:

Placebo to ACZ885 single dose intra-articular (i.a) followed by LNA043 40 mg administrated i.a every four weeks, three times.

Arm type	Experimental
Investigational medicinal product name	Placebo to ACZ885+LNA043
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection, Powder for solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Placebo to ACZ885 single dose i.a followed by LNA043 40 mg administrated i.a every four weeks, three times.

Arm title	Placebo to ACZ885
------------------	-------------------

Arm description:

Placebo to ACZ885 single dose intra-articular.

Arm type	Placebo
Investigational medicinal product name	Placebo to ACZ885
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intraarticular use

Dosage and administration details:

Placebo to ACZ885 single dose i.a.

Arm title	ACZ885 600 mg + LNA043 40 mg

Primary: Change in cartilage volume in the index region measured by MRI at Day 197 (Placebo to ACZ885+LNA043 versus Placebo to ACZ885)

End point title	Change in cartilage volume in the index region measured by MRI at Day 197 (Placebo to ACZ885+LNA043 versus Placebo to ACZ885) ^{[1][2]}
End point description: Magnetic resonance images (MRI) were obtained from the target knee to visualize and quantify changes in volume of cartilage in the index region. The index region was defined as the union of the femoral medial anterior (FMA), central (FMC) and posterior (FMP) cartilage subregions in the knee.	
End point type	Primary
End point timeframe: Baseline, Day 197	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: only analyzed descriptively.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is specific for the arms presented.

End point values	Placebo to ACZ885+LNA043 40 mg	Placebo to ACZ885		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2	5		
Units: μL				
arithmetic mean (standard deviation)	108.33 (\pm 226.451)	-26.13 (\pm 65.204)		

Statistical analyses

No statistical analyses for this end point

Primary: Change in Knee injury and Osteoarthritis Outcome Score (KOOS) Pain subscale (ACZ885 versus Placebo to ACZ885)

End point title	Change in Knee injury and Osteoarthritis Outcome Score (KOOS) Pain subscale (ACZ885 versus Placebo to ACZ885) ^{[3][4]}
-----------------	---

End point description:

The KOOS questionnaire is a commonly used instrument to assess the patient's perception about their knee and associated problems. The original KOOS consists of 5 subscales. One of those is the KOOS pain consisting of 9 questions with a recall of 7 days. Each question has 5 standardized answer options with a score from 0 to 4. A normalized score (100 indicating no symptoms and 0 indicating extreme symptoms) is calculated for each subscale.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, Day 85

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: only analyzed descriptively.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is specific for the arms presented.

End point values	Placebo to ACZ885	ACZ885 600 mg		
Subject group type	Reporting group	Reporting group

Secondary: Maximum serum concentration (Cmax) of ANGPTL3 (Placebo to ACZ885+LNA043 versus ACZ885+LNA043)

End point title	Maximum serum concentration (Cmax) of ANGPTL3 (Placebo to ACZ885+LNA043 versus ACZ885+LNA043) ^[5]
-----------------	--

End point description:

ANGPTL3 is a protein that is primarily involved in the lipid metabolism but has recently been shown to have chondrogenic and chondroprotective effects.

Cmax is defined as the maximum (peak) observed concentration following a dose. ANGPTL3 serum concentrations were determined using the actual recorded sampling times and non-compartmental method with Phoenix WinNonlin (Version 8 or higher). ANGPTL3 was determined by a validated ligand binding assay; the anticipated LLOQ is 39.7 pmol/L in serum.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose Day 1, Day 15, Day 43 and 60 minutes after first injection of LNA043 on Day 15

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is specific for the arms presented.

End point values	Placebo to ACZ885+LNA043 40 mg	ACZ885 600 mg + LNA043 40 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2	3

Secondary: Change in cartilage thickness of the index region measured by MRI at Day 197 and Day 365 (Placebo to ACZ885+LNA043 versus Placebo to ACZ885)

End point title	Change in cartilage thickness of the index region measured by MRI at Day 197 and Day 365 (Placebo to ACZ885+LNA043 versus Placebo to ACZ885) ^[14]
-----------------	--

End point description:

Magnetic resonance images (MRI) were obtained from the target knee to visualize and quantify changes in thickness of cartilage in the index region. The index region was defined as the union of the femoral medial anterior (FMA), central (FMC) and posterior (FMP) cartilage subregions in the knee.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 197 and 365

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is specific for the arms presented.

Secondary: Change in synovitis level measured from Ktrans by Dynamic Contrast Enhanced MRI (DCE-MRI) (ACZ885 versus Placebo to ACZ885)

End point title	Change in synovitis level measured from Ktrans by Dynamic Contrast Enhanced MRI (DCE-MRI) (ACZ885 versus Placebo to ACZ885) ^[15]
-----------------	---

End point description:

Magnetic resonance images (MRI) were obtained from the target knee with dynamic contrast enhancement (DCE) to visualize and quantify changes in k-trans as a marker of the activity of synovial inflammation. During the DCE-MRI acquisition, while the contrast agent is preferentially taken up at sites with an increased perfusion due to the formation of new vessels with high porosity (such as the inflamed synovial membrane), a temporal variation of the MRI signal intensity occurs. When the contrast distributes through the intravascular and extravascular spaces, the MR signal intensity in the image volume elements (voxels) of the target tissue changes over time, generating so-called signal intensity (SI) curves. These curves can then be analyzed to derive parameters related to tissue perfusion. The parameter of primary interest was the volume transfer rate of the gadolinium-based contrast agent (GBCA) from the blood plasma in synovium, commonly referred to as Ktrans.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 December 2021	This amendment was generated to investigate differences in pain endpoints between all the four treatment arms (also comparing TA3 vs TA1 and TA3 vs TA4).
08 December 2022	This amendment was generated to clarify permissible re-screening scenarios and to specify the required period of contraception use for women of child-bearing potential after the last investigational drug administration. The amendment also describes an Informed Consent Form used for healthy volunteers during the MRI qualification process, if required by local regulations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The small sample size overall and the difference in group sizes do not allow a valid interpretation of the data regarding efficacy, pharmacokinetics and immunogenicity.

Notes:
