

Clinical trial results:

A Phase 2 Open-label Study to Assess the Safety, Tolerability, and Efficacy of Viltolarsen in Ambulant and Non-Ambulant Boys with Duchenne Muscular Dystrophy (DMD) Compared to Natural History Controls

Summary

EudraCT number	2020-003653-30
Trial protocol	IT ES
Global end of trial date	13 July 2023

Results information

Result version number	v1 (current)
This version publication date	06 March 2024
First version publication date	06 March 2024

Trial information

Trial identification

Sponsor protocol code	NS-065/NCNP-01-211

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002853-PIP01-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 December 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 July 2023
Global end of trial reached?	Yes
Global end of trial date	13 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of viltolarsen administered intravenously (IV) at weekly doses of 80 mg/kg in ambulant and non ambulant boys ≥ 8 years of age with DMD

Protection of trial subjects:

All considerations regarding the protection of human subjects were carried out in accordance with the protocol, GCP, ICH Guidelines, the ethical principles that have their origin in the Declaration of Helsinki, and all applicable regulatory requirements. The investigator (according to applicable regulatory requirements) or a person designated by the investigator and under the investigator's responsibility fully informed patients of all pertinent aspects of the clinical trial.

Background therapy:

Not applicable.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	05 April 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	China: 4
Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Türkiye: 5
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	20
EEA total number of subjects	4

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	13
Adolescents (12-17 years)	4
Adults (18-64 years)	3
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Twenty-one (21) patients were screened. Five patients were screen failed (4 patients due to reasons related to COVID-19 and 1 patient due to failure to satisfy exclusion criterion 1) and were rescreened and dosed. One patient was screen failure due to failure to satisfy exclusion criterion 5 and was not dosed. Twenty (20) patients were dosed.

Pre-assignment

Screening details:

Ambulant and non-ambulant boys ≥ 8 years of age with a confirmed diagnosis of Duchenne Muscular Dystrophy (DMD), who had a Brooke scale rating of 3 or better OR an upright Forced Vital Capacity (FVC) 30% or greater at Screening, on a stable dose of glucocorticoid (GC) or were not treated with GC for at least 3 months prior to the first dose.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable.

Arms

Arm title	Viltolarsen 80 mg/kg
-----------	----------------------

Arm description:

Patients received IV infusions of viltolarsen injection administered once weekly over a 48-week period. Patients were dosed at 80 mg/kg/week.

Arm type	Experimental
Investigational medicinal product name	Viltolarsen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Viltolarsen injection 250 mg aqueous infusion was supplied as a 5 mL glass vial containing 50 mg/mL of drug substance solution in saline.

Patients received IV infusions of viltolarsen injection administered once weekly over a 48-week period. Patients were dosed at 80 mg/kg/week.

Viltolarsen is a novel antisense oligonucleotide for the treatment of DMD. Viltolarsen is designed to interact with the dystrophin gene ribonucleic acid (RNA) and alter the exon/intron splicing patterns. The mechanism of action for viltolarsen is to bind to a specific sequence in or near exon 53 of the dystrophin pre-RNA transcript and block the exon/intron splicing of exon 53, leading to mature mRNA transcripts that lack exon 53. The loss of exon 53 restores the mRNA reading frame, thus converting a DMD (out-of-frame) deletion mutation to a Becker-like (in frame) deletion mutation.

Number of subjects in period 1	Viltolarsen 80 mg/kg

Baseline characteristics

Reporting groups

Reporting group title	Viltolarsen 80 mg/kg
-----------------------	----------------------

Reporting group description:

Patients received IV infusions of viltolarsen injection administered once weekly over a 48-week period. Patients were dosed at 80 mg/kg/week.

Reporting group values	Viltolarsen 80 mg/kg	Total	
Number of subjects	20	20	
Age categorical			
Counts and percentages of patients in each analysis population are summarized based on all dosed patients. The modified Intent-to-Treat (mITT) Population consisted of all patients who received at least 1 dose of IP and had a baseline assessment and at least 1 post-baseline efficacy assessment. This was the analysis population for the evaluation of efficacy. The Safety Population consisted of all patients who received at least 1 dose of IP. This was the primary analysis population for the evaluation of safety.			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	13	13	
Adolescents (12-17 years)	4	4	
Adults (18-64 years)	3	3	
From 65-84 years	0	0	
85 years and over	0	0	
Age continuous			
Counts and percentages of patients in each analysis population are summarized based on all dosed patients. The modified Intent-to-Treat (mITT) Population consisted of all patients who received at least 1 dose of IP and had a baseline assessment and at least 1 post-baseline efficacy assessment. This was the analysis population for the evaluation of efficacy. The Safety Population consisted of all patients who received at least 1 dose of IP. This was the primary analysis population for the evaluation of safety.			
Units: years			
arithmetic mean	12.8		
standard deviation	± 5.47	-	
Gender categorical			
Units: Subjects			
Female	0	0	
Male	20	20	

Subject analysis sets

Subject analysis set title	Safety Population
----------------------------	-------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

The Safety Population consisted of all patients who received at least 1 dose of IP (Investigational

Product). This was the primary analysis population for the evaluation of safety. It includes all patients treated with viltolarsen both ambulant (10) and non-ambulant (10).

End points

End points reporting groups

Reporting group title	Viltolarsen 80 mg/kg
Reporting group description: Patients received IV infusions of viltolarsen injection administered once weekly over a 48-week period. Patients were dosed at 80 mg/kg/week.	
Subject analysis set title	Safety Population
Subject analysis set type	Safety analysis
Subject analysis set description: The Safety Population consisted of all patients who received at least 1 dose of IP (Investigational Product). This was the primary analysis population for the evaluation of safety. It includes all patients treated with viltolarsen both ambulant (10) and non-ambulant (10).	

Primary: Treatment Related Adverse Events

End point title	Treatment Related Adverse Events ^[1]
End point description: Number of participants with treatment related Adverse Events as assessed by CTCAE v4.03. 19 (95.0%) patients experienced a total of 66 TEAEs. The maximum severity of TEAEs was mild for 7 (35.0%) patients and moderate in 12 (60.0%) patients. No patients experienced a severe TEAE. 2 (10.0%) patients experienced a TEAE which led to interruption in dosing. Most (17 [85.0%]) patients experienced TEAEs that were considered recovered or resolved. Two (10.0%) patients experienced TEAEs that were considered not recovered or resolved. 4 (20.0%) patients experienced a total of 4 IP-related TEAEs. The maximum severity of IP related TEAEs was mild for 3 (15.0%) patients and moderate in 1 (5.0%) patient. No patients experienced a severe IP-related TEAE. One (5.0%) patient experienced an IP-related TEAE that resulted in interruption in dosing. All IP related TEAEs were considered recovered or resolved. Five (25.0%) patients experienced a total of 6 AESIs (Adverse event of special interest).	
End point type	Primary
End point timeframe: Baseline to up to 48 weeks of treatment.	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analysis was performed for this endpoint. The information has been introduced in the section "Adverse Events".	

End point values	Viltolarsen 80 mg/kg			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: patients	20			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

TEAEs were defined as any adverse events (AEs) that started on or after first dose of IP through 30 days after completion of study participation.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 March 2022	<p>The original Protocol (Version 1.0) was dated 21 January 2021. There was 1 global Amendment and 2 China-specific Amendments to the original Protocol. There were 4 Administrative Letters.</p> <p>This amendment was developed to specify the minimum number of ambulant patients to be enrolled in the study (a minimum of 8); to clarify a location of blood sampling during the investigational product infusion and post-infusion; to specify the blood draw volumes; to clarify time points when viltorase levels in plasma will be assessed; and to add necessary clarifications to the home infusion option. In addition, the details of the Performance of Upper Limb 2.0 assessment were added, as was clarification of referencing the United States package insert for the purpose of expedited reporting to the United States Food and Drug Administration and the United States sites. The general considerations of planned statistical methods were updated. A section describing disclosure of data was added to the protocol appendices.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
