Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002600-PIP04-22
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 January 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 January 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the efficacy of twice weekly subcutaneous (SC) doses of pegcetacoplan compared with that of placebo in subjects with primary complement 3 glomerulopathy (C3G) or immune-complex membranoproliferative glomerulonephritis (IC-MPGN) on the basis of a reduction in proteinuria.

Protection of trial subjects:

This research was carried out in accordance with the protocol, applicable regulations, the ethical principles set forth in the Declaration of Helsinki, and the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use Harmonised Guideline for Good Clinical Practice E6 Revision 2. An external, independent data monitoring committee assessed the safety and tolerability data of the study periodically.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 May 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Country: Number of subjects enrolled	United States: 31
Worldwide total number of subjects	124
EEA total number of subjects	44

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	55
Adults (18-64 years)	67
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This Phase 3 randomized, placebo-controlled, double-blinded study was conducted in subjects with C3G or primary IC-MPGN at 122 sites.

Pre-assignment

Screening details:

This study consisted of a screening period (10 weeks), 26-week randomized controlled period (RCP), followed by a 26-week open-label period (OLP) and follow-up period (8 weeks). Subjects were randomized to receive pegcetacoplan or placebo in a ratio of 1:1 in RCP. A total of 124 subjects were enrolled in this study.

Period 1

Period 1 title	Randomized Controlled Period (26 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Randomized Controlled Period: Pegcetacoplan

Arm description:

All adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kilogram (kg) received pegcetacoplan 1080 milligram (mg) subcutaneous (SC) infusion twice weekly for 26 weeks in RCP.

Adolescent subjects with body weight 35 to < 50 kg received pegcetacoplan 648 mg for the first SC infusion and 810 mg SC infusion thereafter twice weekly for 26 weeks in RCP.

Adolescent subjects with body weight 30 to < 35 kg received pegcetacoplan 540 mg for the first 2 SC infusions and 648 mg SC infusion thereafter twice weekly for 26 weeks in RCP.

Arm type	Experimental
Investigational medicinal product name	Pegcetacoplan
Investigational medicinal product code	APL-2
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Pegcetacoplan SC infusion twice weekly for 26 weeks in RCP.

Arm title	Randomized Controlled Period: Placebo
------------------	---------------------------------------

Arm description:

All adult subjects (regardless of weight) and adolescent subjects (with body weight: 30 to < 35 kg, 35 to < 50 kg, and ≥ 50 kg) received placebo matching with pegcetacoplan SC infusion twice weekly for 26 weeks in RCP.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matching with pegcetacoplan SC infusion twice weekly for 26 weeks in RCP.

Number of subjects in period 1	Randomized Controlled Period: Pegcetacoplan	Randomized Controlled Period: Placebo
Started	63	61
Completed	61	57
Not completed	2	4
Consent withdrawn by subject	-	2
Investigator or Medical Monitor Decision	1	-

Pregnancy	-	1
Lost to follow-up	-	1

Period 2

Period 2 title	Open-Label Period (26 Weeks)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Open-Label Period: Pegcetacoplan to Pegcetacoplan

Arm description:

All eligible adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 1080 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 35 to <50 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 810 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 30 to <35 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 648 mg SC infusion twice weekly for 26 weeks in OLP.

Arm type	Experimental
Investigational medicinal product name	Pegcetacoplan
Investigational medicinal product code	APL-2
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Pegcetacoplan SC infusion twice weekly for 26 weeks in OLP.

Arm title	Open-Label Period: Placebo to Pegcetacoplan
------------------	---

Arm description:

All eligible adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kg who received placebo in RCP entered OLP to receive pegcetacoplan 1080 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 35 to <50 kg who received placebo in RCP entered OLP to receive pegcetacoplan 810 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 30 to <35 kg who received placebo in RCP entered OLP to

receive pegcetacoplan 648 mg SC infusion twice weekly for 26 weeks in OLP.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matching with pegcetacoplan SC infusion twice weekly for 26 weeks in OLP.

Number of subjects in period 2	Open-Label Period: Pegcetacoplan to Pegcetacoplan	Open-Label Period: Placebo to Pegcetacoplan
Started	61	57
Completed	59	55
Not completed	2	2
Consent withdrawn by subject	-	1

Primary: Randomized Controlled Period: Change From Baseline in Log-Transformed Urine Protein-to-Creatinine Ratio (uPCR) at Week 26

End point title	Randomized Controlled Period: Change From Baseline in Log-Transformed Urine Protein-to-Creatinine Ratio (uPCR) at Week 26
End point description: Baseline uPCR value was calculated as the average of the uPCR measurements from at least 6 of the 9 first-morning spot urine (FMU) samples collected between the start of screening and Day 1, inclusive. The uPCR values used to calculate baseline included those from the samples collected on Day -2, Day -1, and before dosing on Day 1. In situations where less than 6 samples or more than 9 samples were collected, the average of all collected samples was used for baseline derivation. The difference between treatment groups using a composite contrast of equal-weighted average over Weeks 24, 25, and 26 was estimated. The intent-to-treat (ITT) analysis set included all randomized subjects.	
End point type	Primary
End point timeframe: Baseline (Day 1) to Week 26

Secondary: Randomized Controlled Period: Percentage of Subjects Who Achieved the Composite Renal Endpoint at Week 26

End point title	Randomized Controlled Period: Percentage of Subjects Who Achieved the Composite Renal Endpoint at Week 26
End point description:	
Subject who achieved a composite renal endpoint was defined as: (1) a stable or improved estimated glomerular filtration rate (eGFR) compared to baseline ($\leq 15\%$ reduction in eGFR), and (2) a $\geq 50\%$ reduction in uPCR compared to baseline. Percentages are rounded off to the hundredth decimal place. The ITT analysis set included all randomized subjects.

Secondary: Randomized Controlled Period: Change From Baseline in the Functional Assessment of Chronic Illness Therapy- Fatigue (FACIT-Fatigue) Score at Week 26

End point title	Randomized Controlled Period: Change From Baseline in the Functional Assessment of Chronic Illness Therapy- Fatigue (FACIT-Fatigue) Score at Week 26
End point description: The FACIT-Fatigue scale was a 13-item Likert scaled instrument that was self-administered by subjects. Subjects were presented with 13 statements and asked to indicate their responses as it applied to the past 7 days. The 5 possible responses were "not at all" (0), "a little bit" (1), "somewhat" (2), "quite a bit" (3) and "very much" (4). With 13 statements the total score has a range of 0 (worse health-related quality of life) to 52 (best health-related quality of life). Higher scores indicate better quality of life. Baseline was defined as the most recent non-missing measurement prior to taking the first dose of study drug. The ITT analysis set included all randomized subjects.	
End point type	Secondary
End point timeframe: Baseline (Day 1) and Week 26	

End point values	Randomized Controlled Period: Pegcetacoplan	Randomized Controlled Period: Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	63	61		
Units: units on a scale				
least squares mean (confidence interval 95%)	0.929 (-1.549 to 3.407)	0.367 (-1.949 to 2.683)		

Statistical analyses

Statistical analysis title	Treatment difference in FACIT-fatigue score
Statistical analysis description: The ANCOVA model included treatment as fixed effect, adjusted for baseline, disease type, and stratification factors.	
Comparison groups	Randomized Controlled Period: Pegcetacoplan v Randomized Controlled Period: Placebo
Number of subjects included in analysis	124
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.7384
Method	ANCOVA
Parameter estimate	Difference in LS mean
Point estimate	0.562
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.739
upper limit	3.863

Secondary: Randomized Controlled Period: Change From Baseline in the Kidney Disease Quality of Life (KDQOL) Score at Week 26

End point title	Randomized Controlled Period: Change From Baseline in the Kidney Disease Quality of Life (KDQOL) Score at Week 26
End point description: The KDQOL score was constructed as the KDQOL-36 Summary Score (KSS) by averaging the 24 items from Burden of Kidney Disease, Symptoms and Problems of Kidney Disease, and Effects of Kidney Disease on scale ranging from 0 (worse health-related quality of life) to 100 (best health-related quality of life). Higher scores indicate better quality of life. Baseline was defined as the most recent non-missing measurement prior to taking the first dose of study drug. The ITT analysis set included all randomized subjects.	
End point type	Secondary
End point timeframe: Baseline (Day 1) and Week 26	

End point values	Randomized Controlled Period: Pegcetacoplan	Randomized Controlled Period: Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	63	61		
Units: units on a scale				
least squares mean (confidence interval 95%)	0.757 (-2.385 to 3.900)	-0.587 (-3.847 to 2.672)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

TEAE data is reported from first dose of study drug (Day 1) up to 56 days after the last dose of study drug (Week 52), up to 60 weeks.

Deaths (all-cause): From first dose of study drug (Day 1) up to end of the study, approximately 137 weeks.

Adverse event reporting additional description:

The safety set included all subjects who received at least 1 dose of study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Randomized Controlled Period: Pegcetacoplan
-----------------------	---

Reporting group description:

All adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kg received pegcetacoplan 1080 mg SC infusion twice weekly for 26 weeks in RCP.

Adolescent subjects with body weight 35 to < 50 kg received pegcetacoplan 648 mg for the first SC infusion and 810 mg SC infusion thereafter twice weekly for 26 weeks in RCP.

Adolescent subjects with body weight 30 to < 35 kg received pegcetacoplan 540 mg for the first 2 SC infusions and 648 mg SC infusion thereafter twice weekly for 26 weeks in RCP.

Reporting group title	Randomized Controlled Period: Placebo
-----------------------	---------------------------------------

Reporting group description:

All adult subjects (regardless of weight) and adolescent subjects (with body weight: 30 to < 35 kg, 35 to < 50 kg, and ≥ 50 kg) received placebo matching with pegcetacoplan SC infusion twice weekly for 26 weeks in RCP.

Reporting group title	Open-Label Period: Pegcetacoplan to Pegcetacoplan
-----------------------	---

Reporting group description:

All eligible adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 1080 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 35 to < 50 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 810 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 30 to < 35 kg who received pegcetacoplan in RCP continued to receive pegcetacoplan 648 mg SC infusion twice weekly for 26 weeks in OLP.

Reporting group title	Open-Label Period: Placebo to Pegcetacoplan
-----------------------	---

Reporting group description:

All eligible adult subjects (regardless of weight) and adolescent subjects with body weight ≥ 50 kg who received placebo in RCP entered OLP to receive pegcetacoplan 1080 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 35 to < 50 kg who received placebo in RCP entered OLP to receive pegcetacoplan 810 mg SC infusion twice weekly for 26 weeks in OLP.

Eligible adolescent subjects with body weight 30 to < 35 kg who received placebo in RCP entered OLP to receive pegcetacoplan 648 mg SC infusion twice weekly for 26 weeks in OLP.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 March 2021	Updated study design so that the RCP was double-blinded and added justification of study design section. Shortened the follow-up period for subjects who did not continued receiving pegcetacoplan from 24 to 8 weeks. Added an interim analysis of efficacy when all subjects had completed the 26-week RCP. Revised the endpoints. Amended inclusion and exclusion criteria. Revised dosing recommendations, added regimens for adolescent subjects ≥ 50 kg, 35 to <50 kg, and 20 to <35 kg. Update wording describing monitoring and reporting of AEs and SAEs to align with current company practices. Added wording describing risks related coronavirus disease 2019 (COVID-19) and activities to mitigate these risks.
14 August 2021	Changed planned enrollment from 90 to 80-100 subjects. Clarified vaccination strategy and prophylactic antibiotic use in Risk/Benefit discussion. Changed primary and key secondary objectives to align with endpoint changes. Changed primary efficacy endpoint to remove eGFR component. Changed primary and key secondary efficacy endpoints from Week 52 to Week 26. Increased minimum body weight to 30 kg. Removed discussion of extrapolating placebo response rate from Week 26 to Week 52. Removed interim analyses (interim analysis 1 for sample size readjustment and interim analysis 2 for early efficacy assessment). Added COVID-19 vaccine to COVID-19 risk mitigation section and COVID-19 Appendix.
03 March 2023	Increased duration of screening period from 8 to 10 weeks with a corresponding increase of total duration of study participation to 70 weeks. Increased the minimum number of adolescent participants from 8 to 10. Revised endpoints. Updated discussion of the determination of sample size. Updated the discussion of the efficacy analyses. Updated discussion of assessment of severity of AEs.
25 April 2024	Order of key secondary endpoints revised. Removed exploratory endpoint evaluating normalization of hematuria. Removed exploratory endpoint of evaluation of changes in drusen at 26 weeks. Revised description of the data review for the analysis set. Added description of the activities at the closure of enrollment. Revised description of antidrug antibody assessments.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
