Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 July 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 October 2021
Global end of trial reached?	Yes
Global end of trial date	29 October 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of this study are:

Part A:

To evaluate the effects of CST-139 on cerebral perfusion in healthy subjects.

Part B:

To evaluate the effects of multiple doses of CST-139 on cerebral perfusion in subjects with Mild Cognitive Impairment (MCI) or Parkinson's Disease (PD).

Part C:

To evaluate the effects of multiple doses of CST-103 on cognition in subjects with MCI or PD.

Part D:

To evaluate the effects of multiple doses of CST-103 on cognition in older healthy subjects (aged 55 to 75 years)

Part E:

To evaluate the effects of a single dose of CST-103 on cerebral perfusion in subjects who completed Part C or D

Protection of trial subjects:

Written informed consent was obtained from each subject before any investigation specifically required for the study was performed. The informed consent forms (ICFs) were signed and dated, and were retained by the Principal Investigator as part of the clinical trial records. The terms of the consent and when it was obtained was also documented in the electronic case report form (eCRF). Each subject received a fully signed copy of each ICF that he/she signed for the study.

If a protocol amendment had substantially altered the clinical trial design or increased potential risk to the study subjects, the ICF would have been revised and, if applicable, the subject's consent to continue participation obtained.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 November 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 34
Worldwide total number of subjects	34
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	29
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Subjects who gave informed consent were screened for the study between Day -21 and Day -1. Subjects who met the eligibility criteria were enrolled and underwent the baseline assessments.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	No
Arm title	Part A - CST-139 2mg

Arm description:

Healthy volunteers enrolled in Part A who received CST-139 2 mg

Arm type	Experimental
Investigational medicinal product name	CST-139
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The study drug was administered as two or four 1-mg CST-139 tablets twice daily (4 hours apart) in the clinical study unit by the Investigator or trained and qualified designee. The first dose of study drug was administered on Day 1 following an overnight fast and light breakfast and the second dose was administered 4 hours after the first dose.

Arm title	Part A - CST-139 4 mg
------------------	-----------------------

Arm description:

Healthy volunteers enrolled to Part A who received 4 mg CST-139.

Arm type	Experimental
Investigational medicinal product name	CST-139
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The study drug was administered as two or four 1-mg CST-139 tablets twice daily (4 hours apart) in the clinical study unit by the Investigator or trained and qualified designee. The first dose of study drug was administered on Day 1 following an overnight fast and light breakfast and the second dose was administered 4 hours after the first dose.

Arm title	Part C - Placebo
------------------	------------------

Arm description:

Patients with Parkinson's disease (PD) enrolled into Part C following treatment with placebo.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were randomised to received active vs placebo in a cross-over design involving a 7 day dosing period, followed by a 14 day washout, followed by cross-over to 7 days dosing with the other treatment. The study drug was administered as two 40-µg CST-103 capsules or two matching placebo capsules once daily. Study drug was administered in the clinical study unit by the Investigator or trained and qualified designee following an overnight fast and light breakfast on Days 1 and 7 of each treatment period. On Days 2 to 6, the doses were self-administered by the subjects at home.

Arm title	Part C - CST-103 80 µg
------------------	------------------------

Arm description:

Patients with Parkinson's Disease enrolled in Part C following treatment with CST-103.

Arm type	Experimental
Investigational medicinal product name	CST-103 80 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were randomised to received active vs placebo in a cross-over design involving a 7 day dosing period, followed by a 14 day washout, followed by cross-over to 7 days dosing with the other treatment. The study drug was administered as two 40-µg CST-103 capsules or two matching placebo capsules once daily. Study drug was administered in the clinical study unit by the Investigator or trained and qualified designee following an overnight fast and light breakfast on Days 1 and 7 of each treatment period. On Days 2 to 6, the doses were self-administered by the subjects at home.

Arm title	Part D - Placebo
------------------	------------------

Arm description:

Healthy volunteers enrolled in Part D following treatment with placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were randomised to received active vs placebo in a cross-over design involving a 7 day dosing period, followed by a 14 day washout, followed by cross-over to 7 days dosing with the other treatment. The study drug was administered as two 40-µg CST-103 capsules or two matching placebo capsules once daily. Study drug was administered in the clinical study unit by the Investigator or trained and qualified designee following an overnight fast and light breakfast on Days 1 and 7 of each treatment period. On Days 2 to 6, the doses were self-administered by the subjects at home.

Arm title	Part D - CST-103 80 µg
------------------	------------------------

Arm description:

Healthy volunteers enrolled in Part D following treatment with CST-103.

Arm type	Experimental
Investigational medicinal product name	CST-103 80 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were randomised to received active vs placebo in a cross-over design involving a 7 day dosing

period, followed by a 14 day washout, followed by cross-over to 7 days dosing with the other treatment. The study drug was administered as two 40-µg CST-103 capsules or two matching placebo capsules once daily. Study drug was administered in the clinical study unit by the Investigator or trained and qualified designee following an overnight fast and light breakfast on Days 1 and 7 of each treatment period. On Days 2 to 6, the doses were self-administered by the subjects at home.

Arm title	Part E - CST-103 80 µg
Arm description: Healthy volunteers who completed Part D, enrolled to Part E and received CST-103.	
Arm type	Experimental
Investigational medicinal product name	CST-103 80 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The study drug was administered by the Investigator or trained and qualified designee as two 40-µg CST-103 capsules in the clinical study unit following an overnight fast and light breakfast on Day 1.

Primary: Part A: Change in cerebral perfusion (am)

End point title	Part A: Change in cerebral perfusion (am) ^{[1][2]}
End point description: The change in cerebral perfusion after oral administration of CST-139 as measured by arterial spin labeling magnetic resonance imaging (ALD MRI) in healthy subjects.	
End point type	Primary
End point timeframe: Change from Baseline to 3 hours (± 30-minute window) after administration of the morning dose.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As per protocol, no statistical analyses were performed.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this end point was relevant to Part A only.

End point values	Part A - CST-139 2mg	Part A - CST-139 4 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	5	2		
Units: Percentage				
arithmetic mean (standard deviation)				
Whole grey matter	0.95 (± 3.77)	-4.05 (± 3.13)		
Cortex	0.48 (± 3.93)	-3.95 (± 2.99)		
Subcortical	6.04 (± 5.55)	4.26 (± 3.82)		

Striatum	6.03 (± 5.73)	7.06 (± 3.61)		
Thalamus	6.38 (± 6.02)	-2.44 (± 3.67)		
Amygdala	6.47 (± 10.69)	4.84 (± 10.90)		
Hippocampus	7.29 (± 7.34)	5.95 (± 4.46)		
Cerebellum	2.26 (± 4.26)	-6.89 (± 4.45)		
Whole white matter	0.37 (± 3.87)	-4.59 (± 2.95)		

Statistical analyses

No statistical analyses for this end point

Primary: Part A: Change in cerebral perfusion (pm)

End point title	Part A: Change in cerebral perfusion (pm) ^{[3][4]}
-----------------	---

End point description:

The change in cerebral perfusion after oral administration of CST-139 as measured by arterial spin labeling magnetic resonance imaging (ALD MRI) in healthy subjects.

End point type	Primary
----------------	---------

End point timeframe:

Change from Baseline to 3 hours (± 30-minute window) after administration of the afternoon dose.

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As per protocol, no statistical analyses were performed.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this end point was relevant to Part A only.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose until completion of end of study visit.

Adverse event reporting additional description:

It is noted that the number of occurrences of each adverse event was not reported in the Clinical Study Report. Therefore the number of occurrences presented below is the same as the number of subjects experiencing each event.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 October 2020	The major changes in Version 2.0 (Amendment 1, 07 October 2020) were: <ul style="list-style-type: none">• Added a section describing the Dose Level Review Meetings (DLRMs).• Revised the contraceptive inclusion criteria to reference the added Section 5.5, Contraception based on comments from the Medicines and Healthcare products Regulatory Agency (MHRA). Changes were inclusion of a definition of sexual abstinence, removal of period abstinence and withdrawal as acceptable methods of contraception, and removal of tubal ligation as a surgical sterilization procedure.• Added the exclusion criterion regarding uncontrolled hypertension based on comments from the MHRA because β-AR agonists are known to be associated with hypertension risk.• For clarity, revised terminology "Q4 hours" to specify that twice-daily doses were to be given 4 hours apart.
26 January 2021	The major changes in Versions 3.0, 3.1 and 3.2 (Amendment 2, 20 January 2021, 21 January 2021 and 26 January 2021, respectively) were: <ul style="list-style-type: none">• Changed the primary objective of Part C to evaluating the effects of multiple doses of CST-103 on cognition (it was previously cerebral perfusion based on imaging) and changed the design so that the same randomized, double-blind, placebo-controlled, 2-way crossover design would be used in Parts C and D. Part C was originally designed to provide both imaging and cognition data on the same subjects. However, to minimize potential COVID-19 exposure that may have occurred during the imaging procedure, the protocol was amended to remove imaging during the worst of the COVID-19 pandemic.• Added Part D to evaluate the effects of multiple doses of CST-103 on cognition in older healthy subjects.• Deleted the exclusion criterion for subjects on monoamine oxidase type B inhibitors, dopamine agonists, or catechol-O-methyltransferase inhibitors. Those medications are commonly used by Parkinson's Disease (PD) subjects and were not excluded in other CuraSen studies in a similar study population.
26 April 2021	The major changes in Versions 4.0 and 4.1 (Amendment 3, 22 April 2021 and 26 April 2021, respectively), which was the final version of the protocol, were: <ul style="list-style-type: none">• Deleted Part B that was to evaluate the effects of multiple doses of CST-139 on cerebral perfusion in subjects with Mild Cognitive Impairment (MCI) or PD. A DLRM meeting after the conclusion of Part A determined that due to the drug-related Treatment-Emergent Adverse Events (TEAEs) and variability in the CST-139 plasma concentrations and pharmacokinetics results further investigation of CST-139 in Part B was not warranted.• Added Part E to evaluate the effects of a single dose of CST-103 on cerebral perfusion in subjects who completed Parts C or D.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
02 September 2021	The study was placed on temporary hold and then subsequently terminated early due to a high screen failure rate, challenges due to the COVID-19 pandemic, and a competing CuraSen study enrolling subjects at the same site. There were no safety concerns with the program.	-
