

Clinical trial results:

Phase 1/2 Study of TAK-981 in Combination With Rituximab in Patients With Relapsed/Refractory CD20-Positive Non-Hodgkin Lymphoma

Summary

EudraCT number	2020-003946-36
Trial protocol	FR DE ES IT
Global end of trial date	26 April 2023

Results information

Result version number	v1
This version publication date	11 April 2024
First version publication date	11 April 2024

Trial information

Trial identification

Sponsor protocol code	TAK-981-1501

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 April 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 April 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to determine the safety and tolerability of TAK-981 in combination with rituximab in participants with r/r NHL.

Protection of trial subjects:

Each participant signed an informed consent form before participating in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	Japan: 4
Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	38
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	17
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 12 investigative sites in the United States, Canada, and Japan from 15 October 2019 to 26 April 2023.

Pre-assignment

Screening details:

Participants with a diagnosis of Non-Hodgkin Lymphoma were enrolled in this study consisting of Phase 1 (Dose Escalation), Phase 2 (Dose Expansion) and Japan-Specific lead-in cohort wherein participants to receive TAK-981 and rituximab.

Period 1

Period 1 title	Dose Escalation (up to 19.36 months)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1: TAK-981 10mg QW

Arm description:

Participants with indolent or aggressive non-Hodgkin lymphoma (NHL) received TAK-981 10 mg, infusion, intravenously (IV), once weekly (QW) on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 milligram per square meter (mg/m²), infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or disease progression (PD) or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.

Arm title	Phase 1: TAK-981 40mg QW
------------------	--------------------------

Arm description:

Participants with indolent or aggressive NHL received TAK-981 40 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.

Arm title	Phase 1: TAK-981 60mg QW
------------------	--------------------------

Arm description:

Participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.

Arm title	Phase 1: TAK-981 90mg QW
------------------	--------------------------

Arm description:

Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.	
Arm title	Phase 1: TAK-981 90mg BIW
Arm description:	
Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
TAK-981 was administered on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle.	
Arm title	Phase 1: TAK-981 120mg QW
Arm description:	
Participants with indolent or aggressive NHL received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.	
Arm title	Japan Lead-in: TAK-981 60mg QW

Arm description:

Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.

Arm title	Japan Lead-in: TAK-981 60mg BIW
------------------	---------------------------------

Arm description:

Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle.

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of participants analysed are the participants available for analyses in dose escalation period.

Period 2

Period 2 title	Dose Expansion (up to 42 months)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Phase 2 (A): TAK-981 120 mg

Arm description:

Participants with relapsed or refractory (r/r) diffuse large B-cell lymphoma (DLBCL) received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:	
Rituximab was administered Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.	
Arm title	Phase 2 (C): TAK-981 120 mg

Arm description:

Participants with follicular lymphoma (FL) received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Investigational medicinal product name	TAK-981
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

TAK-981 was administered on Days 1 and 8 every 21 days in each 21-day treatment cycle.

Baseline characteristics

Reporting groups

Reporting group title	Phase 1: TAK-981 10mg QW
Reporting group description: Participants with indolent or aggressive non-Hodgkin lymphoma (NHL) received TAK-981 10 mg, infusion, intravenously (IV), once weekly (QW) on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 milligram per square meter (mg/m ²), infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or disease progression (PD) or unacceptable toxicity.	
Reporting group title	Phase 1: TAK-981 40mg QW
Reporting group description: Participants with indolent or aggressive NHL received TAK-981 40 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 1: TAK-981 60mg QW
Reporting group description: Participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 1: TAK-981 90mg QW
Reporting group description: Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 1: TAK-981 90mg BIW
Reporting group description: Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 1: TAK-981 120mg QW
Reporting group description: Participants with indolent or aggressive NHL received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Japan Lead-in: TAK-981 60mg QW
Reporting group description: Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Japan Lead-in: TAK-981 60mg BIW
Reporting group description: Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle for up to 12 months or PD or unacceptable toxicity.

Reporting group description: Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m ² , infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Japan Lead-in: TAK-981 60mg BIW
Reporting group description: Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 2 (A): TAK-981 120 mg
Reporting group description: Participants with relapsed or refractory (r/r) diffuse large B-cell lymphoma (DLBCL) received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.	
Reporting group title	Phase 2 (C): TAK-981 120 mg

Reporting group description:

Participants with follicular lymphoma (FL) received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Subject analysis set title	Phase 1 + Japan Lead-in: TAK-981 60mg QW
Subject analysis set type	Per protocol

Subject analysis set description:

PK analysis set consisted of participants with sufficient dosing and PK data to reliably estimate 1 or more PK parameters. Overall number of participants analyzed is the number of participants available for analysis. Number of participants analyzed is the number of participants available for analysis during the specified time-point.

Primary: Phase 1: Number of Participants With One or More Treatment-Emergent Adverse Events (TEAEs)

End point title	Phase 1: Number of Participants With One or More Treatment-Emergent Adverse Events (TEAEs) ^{[1][2]}
-----------------	--

End point description:

Adverse event (AE) means any untoward medical occurrence in a participant administered a pharmaceutical product. An AE can therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product. A TEAE was defined as an adverse event which occurred on or after the first dose of study drug and no more than 30 days after the last dose of study drug. Safety Analysis Set consisted of participants who have received at least 1 dose, even if incomplete, of study drug.

End point type	Primary
----------------	---------

End point timeframe:

From the first dose of study drug through 30 days after the last dose of study drug (up to 42 months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data was collected and analysed only for Phase 1 arms.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive data was collected and analysed only for Phase 1 arms.

End point values	Phase 1: TAK-981 10mg QW	Phase 1: TAK-981 40mg QW	Phase 1: TAK-981 60mg QW	Phase 1: TAK-981 90mg QW

Statistical analyses

No statistical analyses for this end point

Primary: Phase 1: Number of Participants With Grade 3 or Higher TEAEs

End point title	Phase 1: Number of Participants With Grade 3 or Higher
-----------------	--

End point description:

AE means any untoward medical occurrence in a participant administered a pharmaceutical product. An AE can therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product whether or not it is related to the medicinal product. A TEAE was defined as an adverse event which occurred on or after the first dose of study drug and no more than 30 days after the last dose of study drug. A severity grade was evaluated as per the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) Version 5.0, except for Cytokine Release Syndrome (CRS), which was assessed by American Society for Transplantation and Cellular Therapy (ASTCT) consensus grading criteria. Safety Analysis Set consisted of participants who have received at least 1 dose, even if incomplete, of study drug.

End point type	Primary
----------------	---------

End point timeframe:

From the first dose of study drug through 30 days after the last dose of study drug (up to 42 months)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data was collected and analysed only for Phase 1 arms.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive data was collected and analysed only for Phase 1 arms.

End point title	Phase 2: Number of Participants With Grade 3 or Higher TEAEs
-----------------	--

End point description:

AE means any untoward medical occurrence in a participant administered a pharmaceutical product. An AE can therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product whether or not it is related to the medicinal product. A TEAE was defined as an adverse event which occurred on or after the first dose of study drug and no more than 30 days after the last dose of study drug. A severity grade was evaluated as per the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) Version 5.0, except for Cytokine Release Syndrome (CRS), which was assessed by American Society for Transplantation and Cellular Therapy (ASTCT) consensus grading criteria. Safety Analysis Set consisted of participants who have received at least 1 dose, even if incomplete, of study drug.

Reporting groups

Reporting group title	Phase 1: TAK981 10mg QW
-----------------------	-------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 10 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 1: TAK981 40mg QW
-----------------------	-------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 40 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 1: TAK981 60mg QW
-----------------------	-------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 1: TAK981 90mg QW
-----------------------	-------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 1: TAK981 90mg BIW
-----------------------	--------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 90 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Japan Lead-in: TAK981 60mg BIW
-----------------------	--------------------------------

Reporting group description:

Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, BIW on Days 1, 4, 8, and 11 every 21 days in each 21-day treatment cycle for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 1: TAK981 120mg QW
-----------------------	--------------------------

Reporting group description:

Participants with indolent or aggressive NHL received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Japan Lead-in: TAK981 60mg QW
-----------------------	-------------------------------

Reporting group description:

Japanese participants with indolent or aggressive NHL received TAK-981 60 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab 375 mg/m², infusion, IV, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 2 (A): TAK981 120mg
-----------------------	---------------------------

Reporting group description:

Participants with r/r DLBCL received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

Reporting group title	Phase 2 (C): TAK981 120mg
-----------------------	---------------------------

Reporting group description:

Participants with FL received TAK-981 120 mg, infusion, IV, QW on Days 1 and 8 every 21 days in each 21-day treatment cycle in combination with rituximab infusion, intravenously, once on Days 1, 8, and 15 of Cycle 1 and then on Day 1 of each 21-day treatment cycle from Cycle 2 for up to 12 months or PD or unacceptable toxicity.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 July 2019	The following changes were implemented as per Amendment 1: 1. Stated that a starting dose of TAK-981 that is greater than 3 mg may be considered if emerging safety data from the ongoing TAK-981-1002 single agent study supports it, and that alternative dosing schedules may be investigated. 2. Added that the approximately 34 participants in the phase 1b part of the study must be evaluable for dose-limiting toxicities, and that the approximately 56 participants in the phase 2 part of the study should be response evaluable. 3. Increased the number of sites to approximately 9 sites in phase 1b and up to approximately 20 sites total in North America and/or globally. 4. Added an appendix that defines tumor lysis syndrome (TLS). 5. Added statement that, for laboratory assessments, blood chemistries should be monitored at 6 to 8 hours and at 24 hours after the first rituximab dose, and that electrolyte abnormalities should be corrected. 6. Added statement that for participants who show evidence of prior hepatitis B infection (hepatitis B surface antigen [HBsAg] positive [regardless of antibody status] or HBsAg negative but anti-hepatitis B core antibody positive), they should consult with physicians with expertise in managing hepatitis B regarding monitoring. 7. Added that hematology/chemistry assessments should be made at end of treatment. 8. Added an appendix: Recommendations for Initial Management of Electrolyte Abnormalities and Prevention of TLS. 9. Modified inclusion criterion number 3 to require only 1 prior systemic therapy instead of 2.
26 January 2020	The following changes were implemented as per Amendment 2: 1. DLT definitions: In response to FDA's request current for clarifying the DLT criteria due to inconsistency, language was incorporated in the protocol amendment. 2. Added statement in inclusion criteria no. 11, that for fresh tumor biopsies, the lesion must be accessible for a low risk biopsy procedure. 3. Added hematology and chemistry laboratory assessments on Cycle 1 Day 1 as they are required to evaluate the suitability of TAK-981 dosing. 4. Removed window periods for tumor lysis syndrome (TLS)-related laboratory assessment. 5. Added that from Cycle 2 onwards, serum or urine pregnancy test will be performed for women of childbearing potential on Day 1 of each cycle. 6. Added statement that unless triplicate ECG are used as safety ECGs, only the general interpretation of each triplicate needs to be reported to the clinical database. 7. Stated in dose escalation (phase 1b) that the selection of the next recommended dose will be determined by the clinical study team (CST) with Bayesian Logistic Regression Modeling (BLRM) recommendations, and consideration of safety, pharmacokinetic (PK), and pharmacodynamic data, including the emerging safety, PK and pharmacodynamic data from the FIH study (TAK-981-1002). 8. Added a reference for Simon's 2-stage design for sample size determination. 9. Added window periods to biomarkers sample collection times in Schedule of Events' Table for Screening, Cycle 1 and 2 Biomarker Sample Collection. 10. Amended language for laboratory assessments under TLS management, that post dose blood chemistries will be monitored in hospitalized participants "due to high risk TLS".

18 June 2020	The following changes were implemented as per Amendment 3: 1. Updated information of the preliminary clinical experience. 2. Changed the title of the study from Phase 1b/2 to Phase 1/2. 3. Modified the Phase 2 participant population. 4. Added at least 30 additional recruiting sites and clarified that the study may be conducted outside of North America. 5. Extended the duration of the study. 6. Added an Independent Data Monitoring Committee (IDMC) to the Phase 2 study. 7. Added an Independent Review Committee (IRC) to the Phase 2 study. 8. Updated study schematic figure with the specific tumor types and indications during Phase 2. 9. Deleted measured creatinine clearance from the inclusion criterion and renal function testing. 10. Modified the inclusion criterion regarding radiologically measurable lesions. 11. Replaced Clinical Study Team (CST) with Study Monitoring Committee (SMC), and added a description of the SMC. 12. Removed LYRIC criteria for the evaluation of response. 13. Changed the window for image testing. 14. Modified the coagulation testing and urinalysis window period on Cycle 1 Day 1. 15. Changed the tumor and skin biopsy window. 16. Updated AE definition. 17. Updated serious adverse event (SAE) definition. 18. Amended the statistical description of determination of sample size for Phase 2. 19. Modified the length of infusion time. 20. Added a permitted concomitant treatment. 21. Modified the starting dose based on emerging safety data from the TAK-981-1002 single-agent study. 22. Modified the staggering period within each cohort in dose escalation. 23. Modified the grading of CRS to ASTCT Consensus Grading for CRS. 24. Updated information on Diffuse Large B-cell lymphoma. 25. Updated study objectives and endpoints. 26. Clarified exclusion criteria for participants that have undergone ASCT or cellular therapy. 27. Added text on alternative dosing schedules for TAK-981. 28. Added timepoints for serum and plasma sample collection.
19 January 2021	The following changes were implemented as per Amendment 4: 1. The creatinine clearance requirement was lowered based on recent PK analysis that showed minimal renal elimination of TAK-981. 2. In Inclusion Criterion 11, clarified that tumor biopsy collection was for participants in Phase 2, Stage 1. 3. In Exclusion Criterion 9, clarified that the washout period for prior anticancer therapy is within 2 weeks or 5 half-lives before dosing, whichever is shorter; the fragment "(up to a maximum of 4 weeks)" was deleted. 4. In Exclusion Criterion 19, added that the washout period for P-glycoprotein inhibitors is 1 week before TAK-981 dosing. 5. Updated alternative dosing schedules. 6. Clarified that body surface area used to determine rituximab dosing was to be calculated using the Du Bois formula. 7. A footnote was added to the table of chemistry and hematology tests to clarify how the units associated with collection of differential laboratory results were to be described. 8. Text defining the type of imaging assessments required at screening was added to align with the schedule of events. 9. Clarification on specimen collection during Phase 2. 10. Text was added to allow for potential remote monitoring of sites due to the COVID-19 pandemic. 11. Modifications to simplify vital signs assessment and immunosafety parameters across the TAK-981 clinical studies. 12. Alignment with recent FDA recommendations.
31 March 2021	The following changes were implemented as per Amendment 5: 1. Correction and alignment with other TAK-981 protocols. 2. Alignment of exclusion criterion in protocol summary and body. 3. Guidance on benefit/risk assessment for participant participation in the study during the COVID-19 pandemic. 4. Guidance on COVID-19 vaccination timing and procedures during the study. 5. Update to align with current Food and Drug Administration guidance.
02 September 2021	The following changes were implemented as per Amendment 6: 1. Change made to fulfill Health Authority requirement. 2. Updated pharmacology data. 3. Added nonclinical toxicology and clinical experience section with data from latest Investigator's Brochure. 4. Changes made to fulfill local requirements. 5. Update of biomarker samples collected during Phase 2. 6. Added a section defining possible reasons for study termination. 7. Updates of PK pharmacodynamic SOEs to reflect streamlined sample collection strategy in Phase 2.
04 October 2021	The following changes were implemented as per Amendment 7: 1. Correction done to align with the investigator's brochure. 2. Added additional text to include potential predictive biomarkers. 3. Modified description of countries included for conduct of study. 4. Clarification of formula-fixed, paraffin-embedded tissue block.

20 May 2022	The following changes were implemented as per Amendment 8: 1. Updated clinical experience with Phase 1 data to support the Phase 2 design. 2. Updated to provide the rationale for the 2 dose levels selected for the Phase 2 Cohorts B and C. 3. Added text noting the addition of approximately 25 participants to each of the 2 new doses within Cohorts B and C. Updated the total number of participants to 180 accordingly. 4. Updated the duration of the entire study. 5. Added information in the event of QT/corrected QT interval prolongation. 6. Added a sentence stating that pre-dose samples may be collected within up to 3 days before the visit. 7. Added wording to clarify when whole blood samples for DNA analyses are collected. 8. Bone marrow biopsy (BMB) was removed at screening; and footnote s was updated to specify BMB at investigator discretion and Lugano guidelines.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
26 April 2023	The study was terminated due to enrollment challenges.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.
The study was terminated due to enrollment challenges.

Notes:
