

## Clinical trial results: Efficacy and Safety Assessment of T4030 Eye Drops versus Ganfort® UD in Ocular Hypertensive or Glaucomatous Patients. Summary

EudraCT number	2020-003979-18
Trial protocol	FR PL HU BG BE ES IT
Global end of trial date	13 April 2023

### Results information

Result version number	v1 (current)
This version publication date	10 November 2023
First version publication date	10 November 2023

### Trial information

#### Trial identification

Sponsor protocol code	LT4030-301
-----------------------	------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04898387
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Laboratoires Thea
Sponsor organisation address	12 rue Louis Blériot, Clermont-Ferrand, France, 63017
Public contact	Research and Development Department, Laboratoires THEA, Sandrine.Guyon@theapharma.com
Scientific contact	Research and Development Department, Laboratoires THEA, Sandrine.Guyon@theapharma.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 July 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 April 2023
Global end of trial reached?	Yes
Global end of trial date	13 April 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority of T4030 (unpreserved fixed combination of bimatoprost 0.01% and timolol 0.1%) with Ganfort UD (unpreserved fixed combination of bimatoprost 0.03% and timolol 0.5% eye drops) in terms of efficacy.

Protection of trial subjects:

Protection of trial subjects:

Different assessments were done during subject visits in order to ensure subject safety:

- Assessment of the conjunctival hyperaemia on McMonnies photographic scale in each eye.
- Corneal fluorescein staining according to Oxford grading scheme in each eye.
- Far Best Corrected Visual Acuity in each eye.
- Ocular tolerance assessed by the investigator and by the patient.
- Ocular and systemic AE reporting.

All AEs experienced by a patient, irrespective of the suspected causality, was monitored until the event has resolved or stabilised at a level acceptable to the investigator and Medical expert, until there is a satisfactory explanation for the changes observed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 86
Country: Number of subjects enrolled	Spain: 18
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Bulgaria: 149
Country: Number of subjects enrolled	Czechia: 7
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Hungary: 9
Country: Number of subjects enrolled	Italy: 51
Country: Number of subjects enrolled	India: 85
Country: Number of subjects enrolled	Ukraine: 15
Country: Number of subjects enrolled	Russian Federation: 58
Country: Number of subjects enrolled	Tunisia: 58

Worldwide total number of subjects	554
EEA total number of subjects	327

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	282
From 65 to 84 years	264
85 years and over	8

## Subject disposition

### Recruitment

Recruitment details:

554 patients (from 645 screened patients) were randomised in the study: 554 patients in the intent-to-treat (ITT) set, 553 in the Safety set, 550 in the modified-ITT (mITT) set and 508 in the per-protocol (PP) set. The recruitment started on 26-MAR-2021 and was completed on 9-Nov -2022 and the last patient completed on 13-Apr-2023

### Pre-assignment

Screening details:

Patient with both eyes with diagnosed OHT or open-angle glaucoma currently treated with a first-line monotherapy and insufficiently controlled in the opinion of the investigator, and requiring a dual therapy (bitherapy). Incl/Excl criteria checked at screening visit, then patients discontinued their current treatment to start wash-out period.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator <sup>[1]</sup>

Blinding implementation details:

The 2 different treatment kits (T4030 and Ganfort) were identical in external packaging. The identity of the IMP given to each patient was not known by the masked investigator or masked authorised collaborator in charge of the ophthalmic examination and questionnaires, or individuals from the Sponsor in charge of medical evaluation of the data. The masked investigator delegated the recording of used and unused IMPs, to the hospital pharmacy or to a trained collaborator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	T4030

Arm description:

T4030 : PF fixed combination bimatoprost 0.01% and timolol 0.1% eye drops presented in UD  
The patient administered the assigned treatment T4030 once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm 7$  days; Visit #4).

Arm type	Experimental
Investigational medicinal product name	T4030
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye gel in single-dose container
Routes of administration	Ocular use

Dosage and administration details:

The patient administered the assigned treatment (T4030) once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for 12 weeks.

<b>Arm title</b>	Ganfort
------------------	---------

Arm description:

Ganfort : PF fixed combination bimatoprost 0.03% and timolol 0.5% eye drops presented in UD  
The patient administered the assigned treatment Ganfort once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm 7$  days; Visit #4).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Ganfort
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye gel in single-dose container
Routes of administration	Ocular use

Dosage and administration details:

The patient administered the assigned treatment (Ganfort) once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for 12 weeks.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: The identity of the IMP given to each patient was not known by the masked investigator or masked authorised collaborator in charge of the ophthalmic examination and questionnaires, or individuals from the Sponsor in charge of medical evaluation of the data. The masked investigator delegated the recording of used and unused IMPs, to the hospital pharmacy or to a trained collaborator

<b>Number of subjects in period 1</b>	T4030	Ganfort
Started	280	274
Completed	273	262
Not completed	7	12
Consent withdrawn by subject	3	2
Adverse event, non-fatal	1	8
Unknown	2	1
Lost to follow-up	1	-
Covid 19	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	T4030
Reporting group description: T4030 : PF fixed combination bimatoprost 0.01% and timolol 0.1% eye drops presented in UD The patient administered the assigned treatment T4030 once daily at 20:00 ( $\pm 1$ h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm 7$ days; Visit #4).	
Reporting group title	Ganfort
Reporting group description: Ganfort : PF fixed combination bimatoprost 0.03% and timolol 0.5% eye drops presented in UD The patient administered the assigned treatment Ganfort once daily at 20:00 ( $\pm 1$ h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm 7$ days; Visit #4).	

Reporting group values	T4030	Ganfort	Total
Number of subjects	280	274	554
Age categorical Units: Subjects			
Adults (18-64 years)	140	142	282
From 65-84 years	136	128	264
85 years and over	4	4	8
Gender categorical Units: Subjects			
Female	148	168	316
Male	132	106	238

### Subject analysis sets

Subject analysis set title	mITT T4030
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: T4030 arm : All randomised patients having received at least one dose of IMP T4030 with at least one baseline and one post-randomisation efficacy assessment on treatment and considered as-randomised. m-ITT set will be the primary population for efficacy analysis	
Subject analysis set title	mITT Ganfort
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: Ganfort arm : All randomised patients having received at least one dose of IMP Ganfort with at least one baseline and one post-randomisation efficacy assessment on treatment and considered as-randomised. m-ITT set will be the primary population for efficacy analysis	

Reporting group values	mITT T4030	mITT Ganfort	
Number of subjects	276	274	
Age categorical Units: Subjects			
Adults (18-64 years)	138	142	
From 65-84 years	134	128	
85 years and over	4	4	

Gender categorical			
Units: Subjects			
Female	147	168	
Male	129	106

## End points

### End points reporting groups

Reporting group title	T4030
-----------------------	-------

Reporting group description:

T4030 : PF fixed combination bimatoprost 0.01% and timolol 0.1% eye drops presented in UD  
The patient administered the assigned treatment T4030 once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm$ 7 days; Visit #4).

Reporting group title	Ganfort
-----------------------	---------

Reporting group description:

Ganfort : PF fixed combination bimatoprost 0.03% and timolol 0.5% eye drops presented in UD  
The patient administered the assigned treatment Ganfort once daily at 20:00 ( $\pm 1$  h) in the conjunctival cul-de-sac of each eye for the 3-month treatment period from the randomisation visit (Day 1; Visit #2) to the final visit (Week 12; Day 85 $\pm$ 7 days; Visit #4).

Subject analysis set title	mITT T4030
----------------------------	------------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

T4030 arm : All randomised patients having received at least one dose of IMP T4030 with at least one baseline and one post-randomisation efficacy assessment on treatment and considered as-randomised.  
m-ITT set will be the primary population for efficacy analysis

Subject analysis set title	mITT Ganfort
----------------------------	--------------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

Ganfort arm : All randomised patients having received at least one dose of IMP Ganfort with at least one baseline and one post-randomisation efficacy assessment on treatment and considered as-randomised.  
m-ITT set will be the primary population for efficacy analysis

### Primary: Change from baseline in IOP

End point title	Change from baseline in IOP
-----------------	-----------------------------

End point description:

The primary efficacy endpoint is the change from Baseline (Day 1) to Week 12 in IOP at 08:00 in the study eye.  
The study eye is defined as the eligible eye with the highest IOP at baseline at 08:00. In case of no IOP difference between both eyes, the right eye will be considered as the study eye.

End point type	Primary
----------------	---------

End point timeframe:

The primary efficacy endpoint is the change from Baseline (Day 1) to Week 12 in IOP at 08:00 in the study eye.

End point values	mITT T4030	mITT Ganfort		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	276	274		
Units: mmHg				
least squares mean (standard error)	-11.01 ( $\pm$ 0.17)	-10.97 ( $\pm$ 0.17)		

### Statistical analyses

<b>Statistical analysis title</b>	Change from Baseline in IOP at 08:00 at week 12
Statistical analysis description:	
To assess the efficacy of T4030, on the change from Baseline in IOP at 08:00, a Mixed Model for Repeated Measures (MMRM) approach was used.	
The model will include as fixed factors, treatment, scheduled visit time point (Week 6 and Week 12), baseline IOP as covariates, treatment by visit interaction, baseline IOP by visit interaction, and patient as random factor. The Restricted Maximum Likelihood (REML) estimation approach will be used, and the default covariance structure will be unstructured.	
Comparison groups	mITT T4030 v mITT Ganfort
Number of subjects included in analysis	550
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
Parameter estimate	Adjusted Mean Difference
Point estimate	-0.04
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.51
upper limit	0.43
Variability estimate	Standard error of the mean
Dispersion value	0.24

Notes:

[1] - The non-inferiority testing will be performed based on a two-sided 95% CI on the mean difference in change from baseline in IOP after 12 weeks of treatment.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse event reporting from start of the treatment (Day 1) until follow-up Phone call (4 weeks±7 days after the last Investigational Medicinal Product (IMP) instillation)

Assessment type	Systematic
-----------------	------------
