

Clinical trial results:

COVID-19: A Phase 3 Multicenter Clinical Trial to Evaluate the Safety, Reactogenicity and Immunogenicity of the Investigational SARS-CoV-2 mRNA Vaccine CVnCoV in Adults 18 Years of Age and Above With Co-morbidities

Summary

EudraCT number	2020-004070-22
Trial protocol	BE
Global end of trial date	21 September 2021

Results information

Result version number	v1 (current)
This version publication date	30 April 2022
First version publication date	30 April 2022

Trial information

Trial identification

Sponsor protocol code	CV-NCOV-003

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 September 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 September 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the safety and reactogenicity profile after 1 and 2 dose administrations of investigational severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) messenger ribonucleic acid (mRNA) vaccine (CVnCoV).
- To evaluate the humoral immune responses 14 days after 2 dose administrations of CVnCoV.

Protection of trial subjects:

This trial was conducted with the highest respect for the individual participants in compliance with the requirements of this clinical trial protocol (and amendments), and also in compliance with the following:

- The ethical principles that have their origin in the Declaration of Helsinki.
- International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use E6 (R2) Good Clinical Practice: Revised and consolidated guidelines.
- All applicable laws and regulations, including, without limitation, data privacy laws, clinical trial disclosure laws, and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 April 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 129
Worldwide total number of subjects	129
EEA total number of subjects	129

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	114
From 65 to 84 years	15
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This trial was performed in Belgium between 22 April 2021 and 21 September 2021.

Pre-assignment

Screening details:

Of the 172 participants who were screened, 129 participants with co-morbidities known to increase the risk for (severe) COVID-19 were enrolled. Participants received investigational SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Chronic Kidney Disease

Arm description:

Participants with chronic kidney disease received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Kidney function was ascertained from the serum creatinine measurement within the last 6 months, converted into estimated glomerular filtration rate (eGFR) using the Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) equation, with impaired kidney function defined as eGFR <60 mL/min/1.73m².

Arm type	Experimental
Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Intramuscular (IM) injection in the deltoid area, preferably in the nondominant arm.

Arm title	Chronic Obstructive Pulmonary Disease (COPD)
------------------	--

Arm description:

Participants with COPD received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. COPD included emphysema and chronic bronchitis.

Arm type	Experimental
Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Arm title	Obesity
------------------	---------

Arm description:

Participants with obesity received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Obesity was defined as a body mass index (BMI) >32 kg/m².

Arm type	Experimental
----------	--------------

Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Arm title	Chronic Cardiovascular Disease
------------------	--------------------------------

Arm description:

Participants with chronic cardiovascular disease received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Chronic cardiovascular disease included heart failure, structural heart disorder, coronary artery disease, cardiomyopathies and arterial hypertension.

Arm type	Experimental
Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Arm title	Chronic Human Immunodeficiency Virus (HIV) Infection
------------------	--

Arm description:

Participants with chronic HIV infection received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants with chronic HIV infection required stable aviremia (<50 copies/mL) and CD4 count >350/mL as documented by blood samples taken within 12 months before enrollment. Viral load <50 copies/mL over 12 months with transient changes of 50-350 copies/mL was allowed.

Arm type	Experimental
Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Arm title	Type 2 Diabetes Mellitus
------------------	--------------------------

Arm description:

Participants with type 2 diabetes mellitus received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants with type 2 diabetes mellitus required diabetes mellitus to be controlled with medication [HbA1c <58 mmol/mol (7.45%)].

Arm type	Experimental
Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Arm title	Renal Transplant
------------------	------------------

Arm description:

Participants with renal transplant received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants had a renal transplant at least a year ago under stable conditions for at least 6 months with medications, categorized as low risk of rejection.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	CVnCoV Vaccine
Investigational medicinal product code	CV07050101
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM injection in the deltoid area, preferably in the nondominant arm.

Primary: Number of Participants Who Experienced a Solicited Adverse Event (AE) Occurring on the Day of Vaccination and the Following 7 Days After Any Dose

End point title	Number of Participants Who Experienced a Solicited Adverse Event (AE) Occurring on the Day of Vaccination and the Following 7 Days After Any Dose ^[1]
End point description: Reactogenicity was assessed daily via collection of solicited local AEs (injection site pain, redness, swelling, and itching) and solicited systemic AEs (fever, headache, fatigue, chills, myalgia, arthralgia, nausea/vomiting, and diarrhea) using paper diary cards. By definition, all solicited local AEs occurring from the time of first vaccination were considered related to trial vaccination. For solicited systemic AEs, the Investigator assessed the relationship between trial vaccine and each occurrence of each AE. The Safety Analysis Set (SAS) consisted of all participants who received at least 1 dose of CVnCoV and for whom any post-vaccination safety data were available. Values of "99999" indicate standard deviation could not be calculated as a single participant was analyzed.	
End point type	Primary

End point timeframe:

Up to 7 days after vaccination (Days 1 to 8 and Days 29 to 36)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No additional statistical analysis was pre-specified for this endpoint.

End point values	Chronic Kidney Disease	Chronic Obstructive Pulmonary Disease (COPD)	Obesity	Chronic Cardiovascular Disease

Primary: Intensity of Unsolicited AEs Per the Investigator's Assessment Occurring on the Day of Vaccination and the Following 28 Days After Any Dose

End point title	Intensity of Unsolicited AEs Per the Investigator's Assessment Occurring on the Day of Vaccination and the Following 28 Days After Any Dose ^[15]
-----------------	---

End point description:

Diaries were used for collection of unsolicited AEs on each vaccination day and the following 28 days. In addition, participants were contacted by phone to verify whether they had any health concerns since the last visit. Participants were included only once, at the maximum severity. The Investigator made an assessment of intensity for each AE reported during the trial and assigned it to one of the following categories:

- Mild: an event that was easily tolerated by the participant, causing minimal discomfort and not interfering with everyday activities.
- Moderate: an event that caused sufficient discomfort to interfere with normal everyday activities.
- Severe: an event that prevented normal everyday activities.

The SAS including only participants who experienced unsolicited AEs.

End point type	Primary

Statistical analyses

No statistical analyses for this end point

Primary: Number of Participants Who Experienced a Serious Adverse Event (SAE) During the Trial

End point title	Number of Participants Who Experienced a Serious Adverse Event (SAE) During the Trial ^[16]
-----------------	---

End point description:

An SAE was defined as any untoward medical occurrence that, at any dose:

- Resulted in death.
- Was life-threatening.
- Required inpatient hospitalization or prolongation of existing hospitalization.
- Resulted in persistent disability/incapacity.
- Was a congenital anomaly/birth defect in the offspring of the participant.
- Was an important medical event.

The Investigator assessed the relationship between trial vaccine and each occurrence of each AE.

The SAS consisted of all participants who received at least 1 dose of CVnCoV and for whom any post-vaccination safety data were available.

End point type	Primary

Primary: Number of Participants Who Experienced an Adverse Event of Special Interest (AESI) During the Trial

End point title	Number of Participants Who Experienced an Adverse Event of Special Interest (AESI) During the Trial ^[17]
-----------------	---

End point description:

AESIs included:

- AEs with a suspected immune-mediated etiology including potential immune-mediated diseases.
- Other AEs relevant to SARS-CoV-2 vaccine development or the target disease.
- Non-serious intercurrent medical conditions that may affect the immune response to vaccination was also collected throughout the trial.

Participants who received a licensed/authorized vaccine were censored at the day after receiving the licensed/authorized vaccine. The Investigator assessed the relationship between trial vaccine and each occurrence of each AE. The SAS consisted of all participants who received at least 1 dose of CVnCoV and for whom any post-vaccination safety data were available.

End point type	Primary
----------------	---------

End point timeframe:

Up to Day 57

Notes:

[17] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No additional statistical analysis was pre-specified for this endpoint.

Primary: Number of Participants Seroconverting for SARS-CoV-2 Spike Protein Receptor-Binding Domain (RBD) Antibodies on Day 43

End point title	Number of Participants Seroconverting for SARS-CoV-2 Spike Protein Receptor-Binding Domain (RBD) Antibodies on Day 43 ^[18]
-----------------	---

End point description:

Seroconversion was defined as any increase in titer in antibodies against SARS-CoV-2 RBD versus baseline. Participants who received a licensed/authorized vaccine were censored at the day after receiving the licensed/authorized vaccine. The Per Protocol Immunogenicity subset (PPI) included all participants who received both doses within the windows defined in the protocol, had no major protocol deviations expected to impact the immunogenicity outcomes, had not received medical treatments (such as blood products, immunoglobulin therapy) that may interfere with any of the immunogenicity measurements and had at least 1 blood sample collected starting at 14 days (Day 43) post-second vaccination available for analysis.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Day 57

Adverse event reporting additional description:

The SAS consisted of all participants who received at least 1 dose of CVnCoV and for whom any post-vaccination safety data were available.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	24.0
--------------------	------

Reporting groups

Reporting group title	COPD
-----------------------	------

Reporting group description:

Participants with COPD received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. COPD included emphysema and chronic bronchitis.

Reporting group title	Chronic Kidney Disease
-----------------------	------------------------

Reporting group description:

Participants with chronic kidney disease received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Kidney function was ascertained from the serum creatinine measurement within the last 6 months, converted into eGFR using the CKD-EPI equation, with impaired kidney function defined as eGFR <60 mL/min/1.73m².

Reporting group title	Chronic HIV Infection
-----------------------	-----------------------

Reporting group description:

Participants with chronic HIV infection received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants with chronic HIV infection required stable aviremia (<50 copies/mL) and CD4 count >350/mL as documented by blood samples taken within 12 months before enrollment. Viral load <50 copies/mL over 12 months with transient changes of 50-350 copies/mL was allowed.

Reporting group title	Type 2 Diabetes Mellitus
-----------------------	--------------------------

Reporting group description:

Participants with type 2 diabetes mellitus received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants with type 2 diabetes mellitus required diabetes mellitus to be controlled with medication [HbA1c <58 mmol/mol (7.45%)].

Reporting group title	Renal Transplant
-----------------------	------------------

Reporting group description:

Participants with renal transplant received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Participants had a renal transplant at least a year ago under stable conditions for at least 6 months with medications, categorized as low risk of rejection.

Reporting group title	Obesity
-----------------------	---------

Reporting group description:

Participants with obesity received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Obesity was defined as a BMI >32 kg/m².

Reporting group title	Chronic Cardiovascular Disease
-----------------------	--------------------------------

Reporting group description:

Participants with chronic cardiovascular disease received SARS-CoV-2 mRNA vaccine CVnCoV 12 µg on Day 1 and Day 29. Chronic cardiovascular disease included heart failure, structural heart disorder, coronary artery disease, cardiomyopathies and arterial hypertension.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 July 2021	Participants who had already received at least 1 CVnCoV dose were asked to remain in the trial for 3 months following their last CVnCoV dose for safety and immunogenicity follow-up. No immunogenicity samples were to be taken after a participant received their first dose of an authorized/licensed COVID-19 vaccine. Sites were to follow the amended Schedule of Activities until the participant reached 3 months of follow-up post last dose of CVnCoV. The follow-up period, including Visit 9/Day 211 and Phone Contact/Day 302, was removed. The timing of the End-of-trial Visit/Day 393 was amended to 3 months post last injection of CVnCoV. Any participants that were in screening at the time of decision taking were considered screen failures and were not to receive CVnCoV vaccination in line with the enrollment halt. No additional screenings were to be performed. Participants were provided with adequate information about the changes to the trial, in accordance with applicable local regulations and in line with the protocol Section 12.4 "Informed Consent."

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
18 June 2021	During the trial conduct, a decision was taken to stop further recruitment and place vaccination on hold from 18 June 2021 due to the efficacy results from the pivotal Phase 2b/3 trial CV-NCOV-004 and amend the protocol version 2.0 to clarify that all participants should undergo safety and immunogenicity follow-up for 3 months following the last CVnCoV dose.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Participant recruitment was smaller than planned due to early recruitment halt. The Principal Investigators and CureVac decided to terminate the trial early following a change to the risk/benefit profile.

Notes:
