Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 December 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 August 2022
Global end of trial reached?	Yes
Global end of trial date	06 December 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objectives of this study are to evaluate the efficacy and safety of sotatercept (MK-7962) treatment (plus background pulmonary arterial hypertension (PAH) therapy) versus placebo (plus background PAH therapy) at 24 weeks in adults with PAH. The primary hypothesis of the study is that the participants receiving sotatercept will have improved 6-minute walk distance (6MWD) at 24 weeks compared to participants receiving placebo.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy:

Background pulmonary arterial hypertension (PAH) therapy refers to combination therapy consisting of drugs from two or more of the following drug classes: an endothelin-receptor antagonist (ERA), a phosphodiesterase 5(PDE5) inhibitor, a soluble guanylate cyclase stimulator, and/or a prostacyclin analogue or receptor agonist.

Evidence for comparator: -

Actual start date of recruitment	25 January 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 2
Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Brazil: 26
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Czechia: 5
Country: Number of subjects enrolled	France: 30
Country: Number of subjects enrolled	Germany: 71
Country: Number of subjects enrolled	Israel: 9
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Netherlands: 2
Country: Number of subjects enrolled	New Zealand: 2
Country: Number of subjects enrolled	Poland: 22
Country: Number of subjects enrolled	Serbia: 2

Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Spain: 19
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Switzerland: 2
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 88
Worldwide total number of subjects	323
EEA total number of subjects	161

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	269
From 65 to 84 years	54
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Of the 324 randomized participants, 1 participant was randomized in error and did not receive study treatment and no data was collected. Hence, the results are presented on 323 participants.

Pre-assignment

Screening details:

Per protocol, not all participants from the double-blind placebo controlled (DBPC) period entered the long-term double blind (LTDB) period due to clinical worsening or consent withdrawal after DBPC period.

Period 1

Period 1 title	Double Blind Placebo Controlled (DBPC)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Sotatercept plus background PAH therapy

Arm description:

Participants received a starting dose of sotatercept 0.3 mg/kg titrated up to 0.7mg/kg by subcutaneous (SC) injection every 21 days plus background PAH therapy during the double-blind placebo controlled (DBPC) period for up to approximately 24 weeks. After 24 weeks, participants received sotatercept dose titrated up to 0.7mg/kg SC injection every 21 days plus background PAH therapy during the long-term double blind (LTDB) period for up to approximately 72 weeks.

Arm type	Experimental
Investigational medicinal product name	Background PAH Therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Inhalation solution, Powder for injection
Routes of administration	Subcutaneous use, Oral use, Inhalation use, Intravenous use

Dosage and administration details:

Background PAH therapy refers to combination therapy consisting of drugs from two or more of the following drug classes: an endothelin-receptor antagonist (ERA), a phosphodiesterase 5(PDE5) inhibitor, a soluble guanylate cyclase stimulator, and/or a prostacyclin analogue or receptor agonist.

Investigational medicinal product name	Sotatercept
Investigational medicinal product code	
Other name	MK-7962 ACE-011
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Sotatercept at a starting dose of 0.3 mg/kg with a target dose of 0.7 mg/kg administered subcutaneously (SC) every 21 days plus background PAH therapy.

Arm title	Placebo plus background PAH therapy
------------------	-------------------------------------

Arm description:

Participants received dose matched placebo by SC injection every 21 days plus background PAH therapy during the DBPC period for up to approximately 24 weeks and the LTDB period for up to approximately 72 weeks.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo

Statistical analyses

Statistical analysis title	Probability of multicomponent improvement
Comparison groups	Sotatercept plus background PAH therapy (DBPC period) v Placebo plus background PAH therapy (DBPC period)

Number of subjects included in analysis	321
Analysis specification	Pre-specified
Analysis type	
P-value	< 0.001 ^[4]
Method	Cochran-Mantel-Haenszel

Notes:

[4] - A 2-sided p-value was calculated using Cochran-Mantel-Haenszel (CMH) method with WHO FC II/III and background PAH therapy as strata.

Secondary: Change From Baseline in Pulmonary Vascular Resistance (PVR) at Week 24

End point title	Change From Baseline in Pulmonary Vascular Resistance (PVR) at Week 24
-----------------	--

End point description:

PVR is a hemodynamic variable of pulmonary circulation and was measured by right heart catheterization (RHC). Per protocol, the change from baseline in PVR at Week 24 was reported for DBPC period. The analysis population included all randomized participants who received at least one dose of study treatment and who had a baseline measurement for the PVR.

End point type	Secondary

upper limit	-309.61

Notes:

[6] - A 2-sided p-value was calculated using ARSW test with WHO FC II/III and background PAH therapy as strata.

Secondary: Change From Baseline in the Percentage of Participants Who Improve in WHO FC at Week 24

End point title	Change From Baseline in the Percentage of Participants Who
-----------------	--

End point description:

The severity of participant's pulmonary arterial hypertension (PAH) symptoms will be graded using the WHO FC system. WHO functional classification for PAH ranges from Class I (no limitation in physical activity, no dyspnea with normal activity), Class II (slight limitation of physical activity), Class III (marked limitation of physical activity) and Class IV (cannot perform a physical activity without any symptoms, dyspnea at rest). Participants who improve in WHO FC were classified into "Improved", "No change" and "Worsened". Improvement = reduction in FC, worsened = increase in FC and no change = no change in FC. Per protocol, change from baseline in the percentage of participants who improve in WHO FC at Week 24 were reported for DBPC period. The analysis population included all randomized participants who received at least one dose of study treatment and who had a baseline measurement for the WHO FC.

Analysis type	
P-value	< 0.001
Method	Cochran-Mantel-Haenszel

Secondary: Time to Death or the First Occurrence of Clinical Worsening Event

End point title	Time to Death or the First Occurrence of Clinical Worsening Event
-----------------	---

End point description:

Clinical Worsening events are defined as any of the following: worsening-related listing for lung and/or heart transplant; need to initiate rescue therapy with an approved background PAH therapy or the need to increase the dose of infusion prostacyclin by 10% or more; need for atrial septostomy; hospitalization for worsening of PAH (≥ 24 hours); or deterioration of PAH defined by both of the following events occurring at any time: worsened WHO FC and decrease in 6MWD by $\geq 15\%$ confirmed by 2 tests at least 4 hours apart, but no more than 1 week. Per protocol, time to death or the first occurrence of clinical worsening event was reported. The analysis population included all randomized participants who received at least one dose of study treatment and who died or experienced a first clinical worsening event.

End point type	Secondary
End point timeframe:	
Up to approximately 18 months

Secondary: Change From Baseline in Percentage of Participants Who Maintain or Achieve a Low Risk Score Using the Simplified French Risk Score Calculator at Week 24

End point title	Change From Baseline in Percentage of Participants Who Maintain or Achieve a Low Risk Score Using the Simplified French Risk Score Calculator at Week 24
-----------------	--

End point description:

The simplified French risk scoring system was based on the 2015 European Society of Cardiology (ESC)/European Respiratory Society (ERS) guidelines for the diagnosis and treatment of pulmonary hypertension (PH). In this study, the noninvasive parameters were used to determine the score. 'Low risk' was defined as attaining or maintaining all 3 low-risk criteria: WHO FC I or II, 6MWD > 440 m, and NT-proBNP <300 ng/L. Per protocol, change from baseline in percentage of participants who maintained or achieved a low risk score using the simplified French risk score calculator at Week 24 was reported for DBPC period. The analysis population included all randomized participants who received at least one dose of study treatment and who had a baseline measurement for the low risk score.

Secondary: Change From Baseline in the Physical Impacts Domain Score of Pulmonary Arterial Hypertension - Symptoms and Impact (PAH-SYMPACT®) at Week 24

End point title	Change From Baseline in the Physical Impacts Domain Score of Pulmonary Arterial Hypertension - Symptoms and Impact (PAH-SYMPACT®) at Week 24
-----------------	--

End point description:

The PAH SYMPACT is a 23-item questionnaire to measure pulmonary arterial hypertension (PAH)-related symptoms and impact of PAH on daily life. The physical impact domain consists of walking slowly on flat surface, walking quickly on flat surface, walking uphill, carrying things, doing light indoor household chores, washing, or dressing oneself, and needing help from others. Participants were asked to recall and report on each item experienced in past 7 days. Each item score ranges from 0 (not difficult at all) to 4 (extremely difficult). Domain score was calculated by summing individual responses for each item and dividing by number of impact items (range: 0=no physical impact to 4=severe physical impact). Higher score indicated more severe physical impact. Change from baseline in physical impacts domain score at Week 24 was reported for DBPC period. Analysis population included all randomized participants who received at least 1 dose of study treatment and had baseline domain score.

Secondary: Change From Baseline in the Cardiopulmonary Symptoms Domain Score of PAH-SYMPACT® at Week 24

End point title	Change From Baseline in the Cardiopulmonary Symptoms Domain Score of PAH-SYMPACT® at Week 24
-----------------	--

End point description:

The PAH SYMPACT is a 23-item questionnaire to measure PAH-related symptoms and impact of PAH on daily life. The cardiopulmonary symptoms consist of shortness of breath, fatigue, lack of energy, swelling in the ankles or legs, swelling in the stomach area, and cough. Participants were asked to recall and report on each item experienced in past 7 days. Each item score ranges from 0 (no symptom at all) to 4 (very severe symptoms). Mean individual symptom item score was determined for each of the 6 items and a domain score was calculated by summing the mean individual symptom item scores and dividing by the number of items (range: 0=no cardiopulmonary symptoms to 4=severe cardiopulmonary symptoms). Higher score indicated more severe symptoms experienced. Change from baseline in the cardiopulmonary domain score at Week 24 was reported for DBPC period. Analysis population included all randomized participants who received at least 1 dose of study treatment and had a baseline domain score.

Secondary: Change From Baseline in the Cognitive/Emotional Impacts Domain Score of PAH-SYMPACT® at Week 24

End point title	Change From Baseline in the Cognitive/Emotional Impacts Domain Score of PAH-SYMPACT® at Week 24
-----------------	---

End point description:

The PAH SYMPACT is a 23-item questionnaire to measure PAH-related symptoms and impact of PAH on daily life. The Cognitive/Emotional Impact domain consists of thinking clearly, feeling sad, feeling worried, and feeling frustrated. Participants were asked to recall and report on each item experienced in past 7 days. Score for each item ranges from 0 (not difficult at all) to 4 (extremely difficult). A domain score was calculated by summing the individual responses for each item and dividing by the number of impact items (range: 0=no cognitive/emotional impact to 4=severe cognitive/emotional impact). A higher score indicated more severe cognitive/emotional impact. Per protocol, change from baseline in the cognitive/emotional impacts domain score at Week 24 was reported for DBPC period. The analysis population included all randomized participants who received at least one dose of study treatment and who had a baseline cognitive/emotional impacts domain score.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 19 months

Adverse event reporting additional description:

All-cause mortality was reported on all randomized participants. Serious and non-serious adverse events were reported on all randomized participants who received at least one dose of study treatment. Mortality and safety were reported separately for the DBPC and LTDB periods.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 October 2021	The major change for AM1 is to clarify that the Physical Impacts, Cardiopulmonary Symptoms, and Cognitive/Emotional Impacts domains of the PAH-SYMPACT will be evaluated as the secondary endpoints and EQ-5D-5L was removed as the secondary endpoint, removed hematology results requirement prior to study treatment, removed diuretics" from the description of background PAH therapy.06-Oct-2021

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
