Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 June 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to determine the efficacy of wilate in the prophylactic treatment of up to 12 paediatric patients (eight evaluable) with severe VWD (defined as screening von Willebrand factor ristocetin cofactor activity [VWF:RCo] <20%) under the age of 6 years, for a period of 12 months.

Protection of trial subjects:

This trial was conducted in accordance to the principles of ICH- GCP, ensuring that the rights, safety and well-being of patients are protected and in consistency with the Declaration of Helsinki and regulatory requirements. Inclusion and exclusion criteria were carefully defined in order to protect subjects from contraindications, interactions with other medication and risk factors associated with the investigational medicinal product.

Throughout the study safety was assessed, such as monitoring of adverse events, vital signs, bleeding episodes and concomitant medication.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 September 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 3
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Moldova, Republic of: 1
Country: Number of subjects enrolled	North Macedonia: 1
Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	Ukraine: 2
Country: Number of subjects enrolled	United States: 1
Worldwide total number of subjects	12
EEA total number of subjects	5

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	10
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Children under the age of 6 years with severe von Willebrand disease (VWD) requiring substitution therapy with a VWF-containing product were screened according to predefined in- and exclusion criteria.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Wilate
-----------	--------

Arm description:

The VWF/FVIII concentrate wilate, produced from the plasma of human donors, is presented as a powder and solvent for intravenous injection containing nominally 500 IU (international units) or 1000 IU human VWF and human FVIII per vial. Dosing was chosen based on the European Summary of Product Characteristics [16] and adjusted in line with the well described lower IVR and shorter half-life of coagulation factor concentrates in young children.

Arm type	Experimental
Investigational medicinal product name	Wilate
Investigational medicinal product code	
Other name	Wilate 500
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

For the PK assessment, a single dose of 80 IU/kg BW wilate was administered, based on the BW measured at the beginning of the visit. The exact dose was calculated according to the nominal potency, with 70–85 IU/kg BW as the acceptable range. IVR assessments were performed following administration of a prophylactic dose, except for baseline IVR, which was done following administration of a single dose of 80 (70–85) IU/kg BW for the PK assessment. In case of unacceptably frequent breakthrough bleeding episodes (BEs) (i.e. two or more BEs within a 30-day period or one major BE), the dose of wilate was to be increased by ~5 IU/kg BW (depending on the vial size of the additional vial(s) that needed to be injected) and/or the treatment frequency increased.

Number of subjects in period 1	Wilate
Started	12
Completed	11
Not completed	1
Adverse event, non-fatal	1

Primary: Total annualized bleeding rate (TABR) - FAS

End point title	Total annualized bleeding rate (TABR) - FAS ^[1]
End point description:	
The primary endpoint of this study is to determine the total annualised bleeding rate (TABR) during prophylactic treatment with IMP.	
The TABR was calculated as the total number of spontaneous bleeds, traumatic bleeds, and other bleeds occurring in the time period between first prophylactic dose of wilate and the study completion visit, divided by the duration (in years) between first prophylactic dose of wilate and the study completion visit.	
End point type	Primary
End point timeframe:	
Time period between first prophylactic dose of wilate and the study completion visit	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The system does not permit reporting of statistical analyses for studies with only 1 arm/reporting group. Therefore, only results for this endpoint are provided.

Adverse events information

Timeframe for reporting adverse events:

AEs have been elicited at each visit (Baseline up to Study Completion Visit) , whether scheduled or unscheduled.

Assessment type	Systematic

Reporting groups

Reporting group title	Safety Set (SAF)
-----------------------	-------------------

Reporting group description:

The safety set (SAF) included all patients who received at least one dose of wilate.

Serious adverse events	Safety Set (SAF)		
Total subjects affected by serious adverse events			
subjects affected / exposed	4 / 12 (33.33%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Blood and lymphatic system disorders			
Iron deficiency anaemia			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
General disorders and administration site conditions			
Pyrexia			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			
Pneumonia			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Soft tissue infection			

subjects affected / exposed	1 / 12 (8.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Safety Set (SAF)		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	10 / 12 (83.33%)		
Injury, poisoning and procedural complications			
Limb injury			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Lip injury			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Skin laceration			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Vascular disorders			
Hypertension			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Blood and lymphatic system disorders			
Iron deficiency anaemia			
subjects affected / exposed	3 / 12 (25.00%)		
occurrences (all)	4		
General disorders and administration site conditions			
Pain			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Pyrexia			
subjects affected / exposed	2 / 12 (16.67%)		
occurrences (all)	6		
Gastrointestinal disorders			

Dental caries subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Mouth swelling subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 3		
Toothache subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 6		
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	2 / 12 (16.67%) 2		
Skin and subcutaneous tissue disorders Dermatitis contact subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Psychiatric disorders Attention deficit hyperactivity disorder subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Infections and infestations Bronchitis subjects affected / exposed occurrences (all) Conjunctivitis subjects affected / exposed occurrences (all) Ear infection subjects affected / exposed occurrences (all) Gastroenteritis subjects affected / exposed occurrences (all) Nasopharyngitis	1 / 12 (8.33%) 1 1 / 12 (8.33%) 1 1 / 12 (8.33%) 1 1 / 12 (8.33%) 1		

subjects affected / exposed	2 / 12 (16.67%)		
occurrences (all)	2		
Pharyngitis			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Pneumonia			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Pulpitis dental			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Respiratory tract infection			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Respiratory tract infection viral			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Rhinitis			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Scarlet fever			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Soft tissue infection			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	2		
Upper respiratory tract infection			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		
Metabolism and nutrition disorders			
Vitamin D deficiency			
subjects affected / exposed	1 / 12 (8.33%)		
occurrences (all)	1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 August 2021	CSP Version 02 (amended protocol): The original study protocol for this study set a minimum weight of 12.5 kg for all patients at the time of screening to meet the blood volume restriction requirements for paediatric patients (based on an allowable blood draw of 1 % of total blood volume per day and a maximum of 3% per month). Given the rare disease in the underlying study, the challenge of identifying patients, and in order to meet the established recruitment timelines, it was decided to lower the minimum weight criterion to 11.0 kg, which allowed inclusion of patients who miss the initial 12.5 kg criterion by the end of the recruitment period. This could only be accompanied by a saving in blood collection volumes, achieved by shifting the protocol-specified time for the retention sample for later possible virus testing to a later time before first treatment and by omitting one test in a specific pharmacokinetic sample for patients with a body weight below 12.5 kg.
05 December 2022	CSP Version 03 (amended protocol) Further sites have been identified and new countries submitted and so the expected end date of the clinical trial had to be pushed back and was be reset to Q2/2024.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
