

Clinical trial results:

A randomized, double-blind, placebo-controlled, proof of concept study assessing the efficacy and safety of the RIPK1-inhibitor SAR443122 in patients with moderate to severe subacute or discoid/chronic cutaneous lupus erythematosus

Summary

EudraCT number	2020-004703-14
Trial protocol	HU PL IT
Global end of trial date	26 June 2023

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 August 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of SAR443122 in cutaneous lupus erythematosus (CLE).

Protection of trial subjects:

Participants were fully informed of all pertinent aspects of clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the participant and considering the local culture. During the course of the trial, participants were provided with individual participant cards indicating the nature of the trial the participant is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 April 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

EEA total number of subjects	24

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	76
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 50 centers in 15 countries. A total of 132 participants were screened from 01 April 2021 to 01 March 2023, of which 54 were screen failures. Screen failures were mainly due to not meeting the eligibility criteria.

Pre-assignment

Screening details:

A total of 78 participants were randomized in a ratio of 1:1 to either SAR443122 or placebo arm. The randomization was stratified by subtype of CLE (discoid lupus erythematosus [DLE] or subacute cutaneous lupus erythematosus [SCLE]), baseline use of hydroxychloroquine/chloroquine (HCQ/CQ) and by region.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo matched to SAR443122 orally twice a day (BID) for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to SAR443122 was administered orally BID for 12 weeks.

Arm title	SAR443122
------------------	-----------

Arm description:

Participants received SAR443122 300 mg orally BID for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Eclitasertib
Investigational medicinal product code	
Other name	DNL758
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

SAR443122 300 mg was administered orally BID for 12 weeks.

Number of subjects in period 1	Placebo	SAR443122
Started	40	38
Completed	38	35
Not completed	2	3
Adverse event, non-fatal	-	1
Not Related to Coronavirus Disease 2019	1	1
Withdrawal by Subject	1	1

Primary: Percent Change From Baseline in Cutaneous Erythematous Disease Area and Severity Index – Activity (CLASI-A) Sub-Score at Week 12

End point title	Percent Change From Baseline in Cutaneous Erythematous Disease Area and Severity Index – Activity (CLASI-A) Sub-Score at Week 12
End point description:	
<p>The CLASI is a clinician rated scale designed to assess the disease activity and damage in CLE in adults. It is composed of 56 items covering 2 dimensions: the disease activity (CLASI-A) and the disease damage (CLASI-D). CLASI-A disease activity covers the domains: erythema, scale/hypertrophy, recent hair loss/alopecia, and mucous membrane lesions. CLASI-A sub-score ranges for 0 to 70, where 0-9 indicates mild disease, 10-20 indicates moderate disease, and 21-70 indicates severe disease. Higher score indicates a more severe skin disease. Baseline was defined as the Day 1 assessment value. Efficacy population included all randomized participants exposed to the investigational medicinal product (IMP), with available Baseline assessment of the CLASI-A who actually received at least 1 complete dose of IMP and with at least 1 post IMP administration measurement. Only participants with data collected at Week 12 are reported.</p>

Secondary: Change From Baseline in Participants Reported Daily Worst Itch Using Peak Pruritus Numerical Rating Scale (Itch-NRS) at Week 12

End point title	Change From Baseline in Participants Reported Daily Worst Itch Using Peak Pruritus Numerical Rating Scale (Itch-NRS) at Week 12
-----------------	---

End point description:

Peak Pruritus NRS (itch-NRS) is single item patient reported outcomes (PRO) tool that participants used to report intensity of their pruritus (itch) during daily recall period. Participants were asked to rate their worst itch on 0 (no itch) to 10 (worst itch imaginable) NRS by answering following question: "On a scale of 0 to 10, with 0 being 'no itch' and 10 being 'worst itch imaginable', how would you rate your itch at the worst moment during previous 24 hours?". Total score on scale ranges from 0 (no itch) to 10 (worst itch imaginable). Higher score indicates more severe skin disease. Baseline was defined as average of daily non-missing scores obtained during the week prior to Day 1. Efficacy population included all randomized participants exposed to the IMP, with available Baseline assessment of the CLASI-A who actually received at least 1 complete dose of IMP and with at least 1 post IMP administration measurement. Only participants with data collected at Week 12 are reported.

End point title	Percentage of Participants With Investigator's Global Assessment of Cutaneous Lupus Erythematosus (IGA-CLE) Score of 0 or 1 (Clear Or Almost Clear) at Week 12
-----------------	--

End point description:

IGA-CLE is a clinician reported outcome (ClinRO) that allows for clinicians to assess overall disease activity of CLE using 5-point scale: 0 (clear), 1 (almost clear), 2 (mild), 3 (moderate), and 4 (severe). Severity of CLE is determined by descriptions of combination of 3 plaque characteristics: erythema,

scale, elevation. Erythema is primary characteristic that influenced the rating, with other characteristics considered secondarily. Telangiectatic change is not considered in rating. The assessment did not require presence of all 4 characteristics, severity was averaged over observed characteristics. Total score on scale ranges from 0 to 4. Higher score indicates a more severe skin disease. Efficacy population included all randomized participants exposed to IMP, with available Baseline assessment of the CLASI-A who actually received at least 1 complete dose of IMP and with at least 1 post IMP administration measurement. End point title	Number of Participants With Treatment-emergent Adverse Events (TEAEs), Treatment-emergent Serious Adverse Events (TESAEs), and Adverse Events of Special Interest (AESIs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant or clinical study participant, temporally associated with the use of study treatment, whether or not considered related to the study treatment. TEAEs were defined as adverse events that occurred from the time of the first IMP administration up to the end of study visit. Serious adverse events (SAE): Any AE that at any dose: resulted in death, was life-threatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, was a medically important event. An AESI: an AE (serious or nonserious) of scientific and medical concern specific to the Sponsor's product or program, for which ongoing monitoring and immediate notification by Investigator to Sponsor was required. Safety population included all randomized participants exposed to the IMP (regardless of the amount of treatment administered).

End point title	Change From Baseline in SKINDEX-29+3 Total Score at Week 12
-----------------	---

End point description:

Skindex 29+3 is PRO measure designed to assess effects of skin disease on participants' health-related quality of life in adults. It contains following domains: emotions (10 items), symptoms (7 items), functioning (12 items), lupus-specific issues (3 questions), and 1 item about treatment that is not part of

the total score. Recall period is during the past week. Each item is rated on 5-point Likert scale (never, rarely, sometimes, often, all the time). These responses are then transformed to linear scale (0-100) in 25-point increments, where 100=maximal disability. Total score is average of participants' responses to items in given domain, ranging from 0-100, where higher scores indicate a greater impact on health-related quality of life. Baseline=Day 1 assessment value. Efficacy population=all randomized participants exposed to IMP, with available Baseline assessment of the CLASI-A who actually received at least 1 complete dose of IMP and with at least 1 post IMP administration measurement.
