

## Clinical trial results:

**A randomised, double-blind, placebo-controlled, Phase III trial to determine the efficacy and safety of inhaled SNG001 for the treatment of patients hospitalised due to moderate COVID-19**

### Summary

EudraCT number	2020-004743-83
Trial protocol	GB BE PT FR NL IT DE RO ES
Global end of trial date	10 February 2022

### Results information

Result version number	v1 (current)
This version publication date	25 February 2023
First version publication date	25 February 2023

### Trial information

#### Trial identification

Sponsor protocol code	SG018
-----------------------	-------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04732949
WHO universal trial number (UTN)	-

Notes:

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 February 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 February 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate recovery in patients with moderate Coronavirus disease 2019 (COVID-19) after administration of SNG001 compared to placebo.

Protection of trial subjects:

This trial was conducted in accordance with the protocol and consensus ethical principles derived from international guidelines including the Declaration of Helsinki, International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines, and other local applicable laws and regulations. After the trial had been fully explained and the patient had been given ample time to read the patient information sheet (PIS)/ICF, consider the trial, and discuss it in detail, informed consent was gained. The method of obtaining and documenting informed consent and the contents of the consent was discussed and agreed with the appropriate competent authorities. For this study, methods included both written and video consent with only sites in India implementing the audio-video process as per their local guidelines. Each method was discussed and approved by the, applicable IEC/IRB before the site obtained the first consent. Informed consent was always obtained from the patient before any trial related procedures were performed, irrespective of the method used. Patients were informed that their participation was voluntary.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 January 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	Portugal: 26
Country: Number of subjects enrolled	Romania: 14
Country: Number of subjects enrolled	Spain: 35
Country: Number of subjects enrolled	United Kingdom: 176
Country: Number of subjects enrolled	Belgium: 19
Country: Number of subjects enrolled	France: 41
Country: Number of subjects enrolled	Germany: 14
Country: Number of subjects enrolled	Italy: 41
Country: Number of subjects enrolled	Brazil: 18
Country: Number of subjects enrolled	India: 72
Country: Number of subjects enrolled	Israel: 10
Country: Number of subjects enrolled	Mexico: 32

Country: Number of subjects enrolled	Serbia: 81
Country: Number of subjects enrolled	United States: 19
Country: Number of subjects enrolled	Argentina: 5
Country: Number of subjects enrolled	Colombia: 9
Worldwide total number of subjects	623
EEA total number of subjects	201

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	483
From 65 to 84 years	133
85 years and over	7

## Subject disposition

### Recruitment

Recruitment details:

This trial was conducted at 112 centers which included 623 patients across 17 countries. The trial began on 12 January 2021 (first patient consented) and was completed on 10 Feb 2022.

### Pre-assignment

Screening details:

The pre-treatment assessments were performed on Day 0 prior to the first dose preferably. All the study assessments were performed as per the schedule of assessments.

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The patient and investigator-blinded with regard to SNG001 or placebo but not the dose.

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	SNG001
------------------	--------

Arm description:

Patients received SNG001 via inhalation using nebuliser, once a day for 14 days

Arm type	Experimental
Investigational medicinal product name	SNG001
Investigational medicinal product code	SNG001
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

The SNG001 nebuliser (study medication) solution delivered using the nebuliser. The study medication was taken once daily at approximately the same time of day for 14 consecutive days. There was a gap of at least 8 hours between doses.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Patients received Placebo via inhalation using nebuliser, once a day for 14 days

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

The Placebo delivered using the nebuliser. The Placebo was taken once daily at approximately the same time of day for 14 consecutive days. There was a gap of at least 8 hours between doses.

<b>Number of subjects in period 1</b>	SNG001	Placebo
Started	309	314
Completed	233	231
Not completed	76	83
Adverse event, serious fatal	16	18
Consent withdrawn by subject	23	27
Physician decision	2	1
Adverse event, non-fatal	2	1
Other	6	3
Non-serious adverse event	1	3
Non-compliance	-	2
Lost to follow-up	26	27
Protocol deviation	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	SNG001
-----------------------	--------

Reporting group description:

Patients received SNG001 via inhalation using nebuliser, once a day for 14 days

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Patients received Placebo via inhalation using nebuliser, once a day for 14 days

Reporting group values	SNG001	Placebo	Total
Number of subjects	309	314	623
Age categorical Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous Units: years			
arithmetic mean	52	53.7	
standard deviation	± 15.19	± 14.42	-
Gender categorical Units: Subjects			
Female	203	208	411
Male	106	106	212

## End points

### End points reporting groups

Reporting group title	SNG001
Reporting group description:	
Patients received SNG001 via inhalation using nebuliser, once a day for 14 days	
Reporting group title	Placebo
Reporting group description:	
Patients received Placebo via inhalation using nebuliser, once a day for 14 days	

### Primary: Time to Hospital Discharge

End point title	Time to Hospital Discharge
End point description:	
The time to hospital discharge in patients with moderate COVID-19 after administration of SNG001 compared to placebo was evaluated.	
The Intent-to-Treat (ITT) analysis population consisted of all randomised patients.	
End point type	Primary
End point timeframe:	
Day 28	

End point values	SNG001	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	309	314		
Units: day				
median (full range (min-max))	7.0 (7.0 to 8.0)	8.0 (7.0 to 9.0)		

### Statistical analyses

Statistical analysis title	SNG001 vs Placebo
Statistical analysis description:	
Hazard Ratio for time to hospital discharge	
Comparison groups	SNG001 v Placebo
Number of subjects included in analysis	623
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.509
Method	Cox proportional hazard model
Parameter estimate	Hazard ratio (HR)
Point estimate	1.06

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.89
upper limit	1.27

### Primary: Time to Recovery

End point title	Time to Recovery
End point description:	
Recovery in patients with moderate COVID-19 after administration of SNG001 compared to placebo by time to recovery was evaluated.	
The ITT analysis population consisted of all randomised patients.	
Here, the arbitrary value 9999.9999 indicates not calculable. The upper limit was not calculable due to Insufficient number of participants with events	
End point type	Primary
End point timeframe:	
Day 28	

End point values	SNG001	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	309	314		
Units: day				
median (full range (min-max))	25.0 (22.0 to 9999.9999)	25.0 (22.0 to 9999.9999)

---

**Secondary: Number of Patients Who Progressed to Severe Disease or Death**

---

End point title	Number of Patients Who Progressed to Severe Disease or Death
-----------------	--

End point description:

The efficacy of SNG001 compared to placebo in patients with moderate COVID-19 by assessing progression to severe disease or death was evaluated. Severe disease was defined by the Ordinal Scale for Clinical Improvement (OSCI) as a score between 5 and 7. Death was defined by an OSCI score of 8. The ITT analysis population consisted of all randomised patients. Here, the number of participants analyzed signifies the participants with available data that were analyzed for this outcome measure.

End point type	Secondary
----------------	-----------

End point timeframe:

Until Day 35

## Secondary: Change From Baseline in Total Score According to the Breathlessness, Cough and Sputum Scale (BCSS)

End point title	Change From Baseline in Total Score According to the Breathlessness, Cough and Sputum Scale (BCSS)
-----------------	--

End point description:

The efficacy of SNG001 compared with placebo in patients with moderate COVID-19 by assessing changes in daily breathlessness, cough and sputum scores on a scale of 0 (no symptoms) up to 4 (severe symptoms) was evaluated. The BCSS is a daily patient-reported outcome measure that was designed as a daily diary in which patients were asked to record the severity of three symptoms: breathlessness, cough and sputum. Each symptom is represented by a single item which is evaluated on a 5-point scale ranging from 0-4, with higher scores indicating more severe symptoms. Breathing

difficulty: 0=None, 1=Mild, 2=Moderate, 3=Marked, 4=Severe; Cough: 0=No cough, 2=Occasional, 3=Frequent, 4=Almost constant; Sputum: 0=None, 1=Mild, 2=Moderate, 3=Marked, 4=Severe.  
A mean decline of 1 point on the BCSS total scale signifies a substantial reduction in symptom severity.

The ITT analysis population consisted of all randomised patients.

End point type	Secondary
End point timeframe:

## Secondary: Change From Baseline in National Early Warning Score (NEWS2) During the Hospitalisation Period

End point title	Change From Baseline in National Early Warning Score (NEWS2) During the Hospitalisation Period
-----------------	--

End point description:

The efficacy of SNG001 compared to placebo in patients with moderate COVID-19 by assessing changes in NEWS2 during hospitalisation period was evaluated. The NEWS2 is a tool which is used in detection and response to clinical deterioration in adult patients and is a key element of patient safety and improving patient outcomes. The NEWS2 score was calculated using Six physiological parameters such as: respiration rate, oxygen saturation, systolic blood pressure, pulse rate, level of consciousness or new confusion and temperature. Each parameter was assigned a score between 0 and 3 and the NEWS2 score was calculated as the sum of the individual parameter scores. NEWS2 score between 0 and 4: Low, Score of any individual parameter of 3: Low-medium, NEWS2 score of 5 or 6: Medium, NEWS2

score of 7 or more: High.  
Higher scores indicates high clinical risk.  
The ITT analysis population consisted of all randomised patients.

## Secondary: Number of Patients With Presence of COVID-19 Symptoms Based on Daily Assessment

End point title	Number of Patients With Presence of COVID-19 Symptoms Based on Daily Assessment
-----------------	---

End point description:

The efficacy of SNG001 compared to placebo in patients with moderate COVID-19 by daily assessment of COVID-19 symptoms was evaluated. The presence of COVID-19 symptoms were assessed. Individual symptoms related to COVID-19/SARS-CoV-2 infection such as fever, breathlessness, and fatigue were assessed.

The ITT analysis population consisted of all randomised patients.

## Secondary: Quality of Life Measured Using EuroQol 5-dimension 5-level (EQ-5D-5L)

End point title	Quality of Life Measured Using EuroQol 5-dimension 5-level (EQ-5D-5L)
End point description: The efficacy of SNG001 compared to placebo in patients with moderate COVID-19 by using EQ-5D-5L was evaluated. The EQ-5D-5L provides a simple descriptive profile and a single index value for health status. The EQ-5D-5L self-rated questionnaire includes a visual analogue scale, which records the respondent's self-rated health status on a graduated (0–100) scale, with higher scores for higher health-related quality of life. It also includes the EQ-5D-5L descriptive system, which comprises 5 dimensions of health: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. The responses record five levels of severity (no problems/slight problems/moderate problems/severe	

problems/extreme problems) within a particular EQ-5D dimension. Here, 100 means the best health and 0 means the worst health.

The ITT analysis population consisted of all randomised patients.

## Secondary: General Anxiety Disorder 7 Questionnaire (GAD-7) Total Score

End point title	General Anxiety Disorder 7 Questionnaire (GAD-7) Total Score
End point description:	
<p>The efficacy of SNG001 compared to placebo in patients with moderate COVID-19 by assessing long-COVID-19 symptoms was evaluated. Assessment of long-COVID-19 symptoms based on GAD-7 scale. GAD-7 scores seven individual item scales by assigning scores of 0, 1, 2, and 3, to the response categories of "not at all", "several days", "more than half the days", and "nearly every day", respectively. The GAD-7 total score is calculated by summing the individual item scales to give a total score between 0 and 21. Higher score indicates severe anxiety.</p> <p>The ITT analysis population consisted of all randomised patients.</p>

### Secondary: Functional Assessment of Chronic Illness Therapy Fatigue Scale (FACIT-FS [Version 4]) Total Score

End point title	Functional Assessment of Chronic Illness Therapy Fatigue Scale (FACIT-FS [Version 4]) Total Score
-----------------	---

End point description:

Long-COVID-19 symptoms based on FACIT Fatigue Scale (Version 4) were evaluated. The FACIT Fatigue Scale (Version 4) included statements for patients such as: I feel fatigued; I feel weak all over; I feel listless ("washed out"); I feel tired; I have trouble starting things because I am tired; I have trouble finishing things because I am tired; I have energy; I am able to do my usual activities; I need to sleep during the day; I am too tired to eat; I need help doing my usual activities; and I am frustrated by being too tired to do the things I want to do. Based on responses on above statements, scoring was done and scores ranges from 0 to 4, where 0 represents not at all bothered by any of the above problems and 4 indicates very much bothered every day by any of the above problems. Total scores will be calculated as per the algorithm to give a total score on a scale between 0 and 52, where a higher total score indicates lower level of fatigue.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 15, Day 28, Day 60 and Day 90

End point values	SNG001	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	239	248		
Units: Score on a scale				
arithmetic mean (standard deviation)				
Day 15 (n= 239, 248)	39.1 ( $\pm$ 9.79)	38.7 ( $\pm$ 10.31)

### Secondary: Patient Health Questionnaire-9 (PHQ-9) Total Score

End point title	Patient Health Questionnaire-9 (PHQ-9) Total Score
-----------------	--

End point description:

Long-COVID-19 symptoms based on PHQ-9 were evaluated. Patient Health Questionnaire-9 (PHQ-9) scores nine individual item scales by assigning scores of 0, 1, 2, and 3, to the response categories of

"not at all", "several days", "more than half the days", and "nearly every day", respectively. PHQ-9 total scores are calculated by summing the individual item scales to give a total score between 0 and 27. Higher scores indicated worse outcome. The ITT analysis population consisted of all randomised patients.

End point type	Secondary

## Secondary: Overall Pain Severity as Measured by Brief Pain Inventory Composite Scores

End point title	Overall Pain Severity as Measured by Brief Pain Inventory Composite Scores
-----------------	--

End point description:

Brief Pain Inventory Composite Scores is a self administered questionnaire that assesses pain interference. Overall pain severity score is calculated as the mean of questions of the brief pain inventory. The overall pain severity score is the average pain, on a scale from 0 to 10 of the worst pain, least pain and average pain in the last 24 hours and pain right now scores. Here, 0 indicates "No pain" and 10 indicates "Worst pain".

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the day informed consent is obtained until 28 days after the last administration of the study medication (Day 90)

Adverse event reporting additional description:

There were two patients randomised to placebo, one of which was never dosed and the other was dosed but the fatal Adverse Event (AE) started before dosing (i.e. not treatment emergent). For adverse event reporting, safety population was used.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 December 2020	Amendment 2: Recruitment commenced on this version of the protocol. Changes were made following interactions with key regulatory agencies- Key secondary efficacy endpoint 'Time to hospital discharge, defined by the OSCI score of 2 or below, with no rebound at subsequent assessments' to a primary efficacy endpoint; Secondary efficacy endpoints 'Progression to intubation or death, defined by the OSCI score of 6 or above within 28 days of first dose.' and 'death within 28 days of first dose.' to key secondary efficacy endpoints; Addition of the following secondary endpoint: 'daily assessment of COVID-19 symptoms and limitation of usual activities'.
22 February 2021	Amendment 4: Removed exclusion criteria number 12 that excluded patients who had received a prior SARS-CoV-2 vaccination; Included PK sampling schedule based on agreed FDA requirements

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
