

## Clinical trial results:

### A Double Blind, Randomized, Placebo-Controlled, Multicenter Phase IIa, Clinical Trial to Assess Efficacy and Safety of the Human Anti-CD38 Antibody Felzartamab in IgA Nephropathy - IGNAZ

#### Summary

EudraCT number	2020-005054-19
Trial protocol	CZ BG DE BE ES
Global end of trial date	06 May 2024

#### Results information

Result version number	v2 (current)
This version publication date	16 May 2026
First version publication date	22 May 2025
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> The results are being updated to align with the ClinicalTrials.gov results.

#### Trial information

##### Trial identification

Sponsor protocol code	MOR202C206
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05065970
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Biogen
Sponsor organisation address	225 Binney Street, Cambridge, Massachusetts, United States, 02142
Public contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com
Scientific contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 May 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 May 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to assess the efficacy of Felzartamab compared to placebo in participants with IgAN based on the change in urine protein to creatinine ratio (UPCR) at 9 months.

Protection of trial subjects:

Written informed consent was obtained from each subject's parent or legal guardian prior to evaluations being performed for eligibility. Adequate time to review the information in the informed consent and ask questions concerning all portions of the conduct of the study was provided. Through the informed consent process, awareness of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken was made. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Czechia: 8
Country: Number of subjects enrolled	Georgia: 3
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Japan: 8
Country: Number of subjects enrolled	Korea, Republic of: 6
Country: Number of subjects enrolled	Malaysia: 1
Country: Number of subjects enrolled	Philippines: 2
Country: Number of subjects enrolled	Serbia: 4
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	Ukraine: 3
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	54
EEA total number of subjects	24

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	52
From 65 to 84 years	2
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at the investigative sites in Belgium, Bulgaria, Czechia, Georgia, Germany, Japan, Republic of Korea, Malaysia, Philippines, Serbia, Spain, Taiwan, Ukraine, and the United States from 31 August 2021 to 06 May 2024.

### Pre-assignment

Screening details:

A total of 54 participants diagnosed with Immunoglobulin A Nephropathy (IgAN) were enrolled in the study, of which 48 participants completed the study. The study had 2 parts - Part 1 (Global Cohort) and Part 2 (Japanese Cohort).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The Global Study (Part I) was double-blind and the Japanese Cohort (Part II) was open-label.

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Part 1: Placebo

Arm description:

Participants were administered felzartamab matching placebo as an intravenous (IV) infusion on Days 1, 8, 15, 22, 29, 57, 85, 113 and 141.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered as specified in the treatment arm.

<b>Arm title</b>	Part 1: Felzartamab Dosing Arm M1
------------------	-----------------------------------

Arm description:

Participants were administered felzartamab as an IV infusion based on their body weight on Days 1 and 15, and felzartamab matching placebo on Days 8, 22, 29, 57, 85, 113 and 141.

Arm type	Experimental
Investigational medicinal product name	Felzartamab
Investigational medicinal product code	MOR202
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered as specified in the treatment arm.

<b>Arm title</b>	Part 1: Felzartamab Dosing Arm M2
------------------	-----------------------------------

Arm description:

Participants were administered felzartamab as an IV infusion based on their body weight on Days 1, 8, 15, 29, and 57, and felzartamab matching placebo on Days 22, 85, 113 and 141.

Arm type	Experimental
Investigational medicinal product name	Felzartamab
Investigational medicinal product code	MOR202
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered as specified in the treatment arm.

<b>Arm title</b>	Part 1: Felzartamab Dosing Arm M3
------------------	-----------------------------------

Arm description:

Participants were administered felzartamab as an IV infusion based on their body weight on Days 1,8,15, 22, 29, 57, 85, 113 and 141.

Arm type	Experimental
Investigational medicinal product name	Felzartamab
Investigational medicinal product code	MOR202
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered as specified in the treatment arm.

<b>Arm title</b>	Part 2: Japan Cohort
------------------	----------------------

Arm description:

Japanese participants were administered felzartamab as an IV infusion based on their body weight on Days 1,8,15, 22, 29, 57, 85, 113 and 141.

Arm type	Experimental
Investigational medicinal product name	Felzartamab
Investigational medicinal product code	MOR202
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered as specified in the treatment arm.

<b>Number of subjects in period 1</b>	Part 1: Placebo	Part 1: Felzartamab Dosing Arm M1	Part 1: Felzartamab Dosing Arm M2

## End points

### End points reporting groups

Reporting group title	Part 1: Placebo
Reporting group description: Participants were administered felzartamab matching placebo as an intravenous (IV) infusion on Days 1, 8, 15, 22, 29, 57, 85, 113 and 141.	
Reporting group title	Part 1: Felzartamab Dosing Arm M1
Reporting group description: Participants were administered felzartamab as an IV infusion based on their body weight on Days 1 and 15, and felzartamab matching placebo on Days 8, 22, 29, 57, 85, 113 and 141.	
Reporting group title	Part 1: Felzartamab Dosing Arm M2
Reporting group description: Participants were administered felzartamab as an IV infusion based on their body weight on Days 1, 8, 15, 29, and 57, and felzartamab matching placebo on Days 22, 85, 113 and 141.	
Reporting group title	Part 1: Felzartamab Dosing Arm M3
Reporting group description: Participants were administered felzartamab as an IV infusion based on their body weight on Days 1, 8, 15, 22, 29, 57, 85, 113 and 141.	
Reporting group title	Part 2: Japan Cohort
Reporting group description: Japanese participants were administered felzartamab as an IV infusion based on their body weight on Days 1, 8, 15, 22, 29, 57, 85, 113 and 141.	
Subject analysis set title	All Felzartamab and Placebo-Treated Participants
Subject analysis set type	Full analysis
Subject analysis set description: All participants who received felzartamab or placebo during the study with evaluable IgA data and evaluable felzartamab serum concentrations (in felzartamab-treated participants only) divided into exposure quartiles.	
Subject analysis set title	All Felzartamab-Treated Participants
Subject analysis set type	Full analysis
Subject analysis set description: All participants who received felzartamab during the study and had evaluable maximum felzartamab serum concentrations after the first dose.	

### Primary: Part 1: Relative Change From Baseline in Urine Protein to Creatinine Ratio (UPCR) in 24-hour Urine at Month 9

End point title	Part 1: Relative Change From Baseline in Urine Protein to Creatinine Ratio (UPCR) in 24-hour Urine at Month 9 <sup>[1]</sup>
End point description: Proteinuria is high levels of protein in the urine and is measured by UPCR. Relative change in UPCR was estimated based on a mixed effects model for repeated measure (MMRM) model. Least squares (LS) mean and standard error (SE) were reported. The reference proteinuria value before start of treatment is defined as the mean of the values determined at screening and prior to baseline (visit 2) predose (UPCR from 24h urine). Negative change from baseline indicates less proteinuria. The full analysis set (FAS) included all participants randomized to Part 1 of the study. 'Overall number of participants analyzed' signifies number of participants with data available for outcome measure analysis. The change from baseline in UPCR was planned to be analyzed in Part 1 only.	
End point type	Primary
End point timeframe: Baseline, Month 9	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Placebo and Felzartamab dosing arms were planned to be analyzed for this end point.

End point values	Part 1: Placebo	Part 1: Felzartamab Dosing Arm M1	Part 1: Felzartamab Dosing Arm M2	Part 1: Felzartamab Dosing Arm M3

### **Secondary: Integrative Analysis of Several Endpoints: Percent Change From Baseline in Immunoglobulin A (IgA) Concentration by Predose Serum Concentration (Ctough) Group**

End point title	Integrative Analysis of Several Endpoints: Percent Change From Baseline in Immunoglobulin A (IgA) Concentration by Predose Serum Concentration (Ctough) Group
-----------------	---

End point description:

All felzartamab and placebo-treated participants with evaluable IgA data and felzartamab serum concentrations (in felzartamab-treated participants only) were divided into exposure quartiles using the sum of measurable felzartamab Ctough values up to 9 months after the first dose. Percent change from baseline in IgA concentration in these participants was summarized as per each serum concentration quartile. This outcome measure was planned to be analyzed for the overall participants irrespective of the group they were randomized to. Only those participants who had evaluable IgA data and felzartamab serum concentrations are reported as the overall number of participants analyzed. Number analyzed signifies the number of participants available for analysis for the specified category.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 9 months

<b>End point values</b>	All Felzartamab and Placebo-Treated Participants			
Subject group type	Subject analysis set			
Number of subjects analysed	45			
Units: percent change				
arithmetic mean (standard deviation)				

Serum Concentration 0-180 µg/mL (n=12)	-6.12 (± 15.0)			
Serum Concentration 180-370 µg/mL (n=11)	-14.1 (± 15.6)			
Serum Concentration 370-850 µg/mL (n=11)	-19.7 (± 22.7)			
Serum Concentration >850 µg/mL (n=11)	-26.1 (± 10.1)			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Integrative Analysis of Several Endpoints: Maximum Serum Concentrations (C<sub>max</sub>) as per the Infusion-Related Reactions (IRRs) After the First Dose

End point title	Integrative Analysis of Several Endpoints: Maximum Serum Concentrations (C <sub>max</sub> ) as per the Infusion-Related Reactions (IRRs) After the First Dose
End point description: All participants with evaluable maximum felzartamab concentrations after the first dose were included in the analysis. C <sub>max</sub> values were assessed by infusion-related reaction status after the first dose. This outcome measure was planned to be analyzed for all the felzartamab-treated participants together, irrespective of the dose group they were randomized to. Overall number of participants analyzed signifies the number of participants with evaluable data up to week 1. Number analyzed signifies the number of participants available for analysis for the specified category.	
End point type	Secondary
End point timeframe: Up to 1 week	

<b>End point values</b>	All Felzartamab-Treated Participants

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 September 2021	<ul style="list-style-type: none"><li>- Trial design section updated to include country specific (Japanese) open-label cohort to enroll 4 additional participants in M3 dosing arm (part II).</li><li>- Revised exclusion criterion no. 9 (i.e. minimum hemoglobin limit at screening changed from 80 to 90 gram per liter (g/L)).</li><li>- Implemented post infusion monitoring requirements, added additional pre-medication for prevention of IRRs, and recommendation of post infusion medication for participants with a history of asthma and chronic obstructive pulmonary disease.</li><li>- Revised the total volume to 250 milliliter (ml) in the table providing an example of infusion speeds</li><li>- Added stratification information for the 4 Japanese participants enrolling in global study (part I).</li><li>- Revised treatment discontinuation criterion to ensure that participants with grade 3 infusion related reaction (IRR)/allergic reaction or grade 2 cytokine release syndrome (CRS) cannot continue receiving felzartamab.</li><li>- Added criteria of grade 4 hematological abnormalities related to investigational medicinal product (IMP) and clinically significant elevated liver enzymes to the list of reasons for discontinuation from treatment.</li><li>- Removed criteria of "use of prohibited treatment" to clarify that participants using prohibited treatment will be discontinued from the trial</li><li>- Clarified that a participants can be withdrawn from the study due to lack of efficacy.</li><li>- Clarified timing of analysis; primary analysis will be conducted after all participants in global study (part I) complete their 9-month visit or discontinued early. Final analysis will be conducted after all randomized participants in global Study (part I) and Japanese cohort (part II) have completed their last visit, or discontinued the trial earlier.</li><li>- Added Japan population to facilitate further analysis on Japanese participants safety and PK profile.</li><li>- Updated analysis method for primary endpoint.</li><li>- Added description of eGFR under the statistical consideration section.</li></ul>
01 December 2021	<ul style="list-style-type: none"><li>- An overview of procedures related to interim analysis (IA) including unblinding procedures was included.</li><li>- Timing of the 3-months pharmacokinetic (PK) IA was included.</li><li>- IA section was added to describe timing, scope, and procedures related to 3-months PK biomarkers IA with no changes to the planned study design or conduct.</li><li>- A summary of statistical analysis and protocol title was added to section 1.</li><li>- Reporting of treatment error, misuse or abuse section was added.</li><li>- Council for International Organizations of Medical Sciences (CIOMS) international ethical guidelines was added under regulatory and ethical consideration.</li><li>- Text on quality tolerance limits (QTLs) was added.</li></ul>
17 February 2022	<ul style="list-style-type: none"><li>- Section 1.1 and 5 trial design, section 1.3 dosing, section 1.4 trial population were updated to enable flexible enrollment in Japan across part I and part II.</li><li>- Treatment assignment section was updated to clarify stratification in Part I based on country (Japan vs ex-Japan).</li><li>- Section 10.1 Sample size determination and section 10.2 integrative analysis of dose and dosing regimens were updated to include the number of participants in Japan.</li><li>- Section 7.1 Treatments administered were updated to recommend the Investigator to consult medical monitor and sponsor for an alternative premedication(s) in case of unavailability of any of the prespecified premedication.</li></ul>

Notes:

---

## **Interruptions (globally)**

Were there any global interruptions to the trial? No

## **Limitations and caveats**

None reported
