Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 February 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate similarity of pharmacokinetics (PK) in participants with multiple switches between ustekinumab RP and ABP 654 compared to participants receiving continued use of ustekinumab RP.

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation Good Clinical Practice Guideline E6 (R1)/Integrated Addendum E6 (R2); 21 Code of Federal Regulations Parts 50, 56, and 312; requirements for the conduct of clinical studies as provided in the European Union Directive 2001/20/EC; the consensus ethical principles derived from international guidelines, including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines; and all applicable laws and regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 88
Country: Number of subjects enrolled	Estonia: 14
Country: Number of subjects enrolled	Georgia: 6
Country: Number of subjects enrolled	Germany: 64
Country: Number of subjects enrolled	Hungary: 29
Country: Number of subjects enrolled	Latvia: 12
Country: Number of subjects enrolled	Poland: 121

EEA total number of subjects	240

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	431
From 65 to 84 years	63
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 87 study centers in 8 countries, including Canada, Estonia, Georgia, Germany, Hungary, Latvia, Poland, and the United States, and participated from 24 March 2021 to 28 February 2023.

Pre-assignment

Screening details:

Participants with plaque psoriasis were randomized at week 28 to 1 of 2 treatment groups following a run-in period. Randomization was stratified by prior biologic use for psoriasis at baseline, geographic region, and body weight group at baseline. Dosage was weight-based to ensure similar concentration by body weight received.

Period 1

Period 1 title	Run-in Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Arm title	Run-in: Ustekinumab Reference Product (RP)
------------------	--

Arm description:

Participants received ustekinumab RP 45 mg (baseline body weight \leq 100 kg) or 90 mg (baseline body weight $>$ 100 kg) on day 1 (week 0), week 4, and week 16. At week 28, eligible participants with a 50% improvement in Psoriasis Area and Severity Index (PASI 50) response or better were randomized to the continued-use group (ustekinumab RP) or the switching group (ustekinumab RP and ABP 654).

Arm type	Experimental
Investigational medicinal product name	Ustekinumab RP
Investigational medicinal product code	
Other name	Stelara®
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ustekinumab RP 45 mg (baseline body weight \leq 100 kg) or 90 mg (baseline body weight $>$ 100 kg) on day 1 (week 0), week 4, and week 16 in the run-in period.

Number of subjects in period 1	Run-in: Ustekinumab Reference Product (RP)
Started	494
Completed	453
Not completed	41
Adverse event, serious fatal	1
Consent withdrawn by subject	7
Abnormal liver function	1
Study site closure	2
Adverse event, non-fatal	6

Pregnancy	2
Did not meet PASI 50	15
Lost to follow-up	2
Required alternative therapy	2
Protocol deviation	3

Period 2

Period 2 title	Post-randomization Period
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Post-randomization Switching: Ustekinumab RP and ABP 654

Arm description:

At week 28, eligible participants with a PASI 50 response or better were randomized to the switching group and received ABP 654 at week 28, ustekinumab RP at week 40, and ABP 654 at week 52. Ustekinumab RP and ABP 654 (45 mg [baseline body weight ≤ 100 kg] or 90 mg [baseline body weight > 100 kg]) were administered by SC injection using a pre-filled syringe.

Arm type	Experimental
Investigational medicinal product name	ABP 654
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ABP 654 45 mg (baseline body weight ≤ 100 kg) or 90 mg (baseline body weight > 100 kg) at weeks 28 and 52 in the post-randomization period.

Investigational medicinal product name	Ustekinumab RP
Investigational medicinal product code	
Other name	Stelara®
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ustekinumab RP 45 mg (baseline body weight ≤ 100 kg) or 90 mg (baseline body weight > 100 kg) at week 40 in the post-randomization period.

Arm title	Post-randomization Continued-use: Ustekinumab RP
------------------	--

Arm description:

At week 28, eligible participants with a PASI 50 response or better were randomized to the continued-use group to receive ustekinumab RP 45 mg (baseline body weight ≤ 100 kg) or 90 mg (baseline body weight > 100 kg) at weeks 28, 40, and 52. Ustekinumab RP was administered by SC injection using a pre-filled syringe.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Ustekinumab RP
Investigational medicinal product code	
Other name	Stelara®
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ustekinumab RP 45 mg (baseline body weight ≤ 100 kg) or 90 mg (baseline body weight > 100 kg) at weeks 28, 40, and 52 in the post-randomization period.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: In Period 2, eligible participants were randomized to treatment and this was considered the baseline period.

Number of subjects in period 2^[2]	Post-randomization Switching: Ustekinumab RP and ABP 654	Post-randomization Continued-use: Ustekinumab RP
Started	228	225
Full analysis set	228	225
Safety analysis set	228	224
Completed	209	209
Not completed	19	16
Consent withdrawn by subject	7	6
Study site closure	-	1
Adverse event, non-fatal	4	2
Family planning	1	-
Military service	1	-
Pregnancy	-	1
Lost to follow-up	6	6

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of participants included in the worldwide number enrolled aligns with the number of participants who entered the run-in period.

Baseline characteristics

Reporting groups

Reporting group title	Post-randomization Switching: Ustekinumab RP and ABP 654
-----------------------	--

Reporting group description:

At week 28, eligible participants with a PASI 50 response or better were randomized to the switching group and received ABP 654 at week 28, ustekinumab RP at week 40, and ABP 654 at week 52. Ustekinumab RP and ABP 654 (45 mg [baseline body weight ≤ 100 kg] or 90 mg [baseline body weight > 100 kg]) were administered by SC injection using a pre-filled syringe.

Reporting group title	Post-randomization Continued-use: Ustekinumab RP
-----------------------	--

Reporting group description:

At week 28, eligible participants with a PASI 50 response or better were randomized to the continued-use group to receive ustekinumab RP 45 mg (baseline body weight ≤ 100 kg) or 90 mg (baseline body weight > 100 kg) at weeks 28, 40, and 52. Ustekinumab RP was administered by SC injection using a pre-filled syringe.

Secondary: PASI Percent Improvement From Baseline at Week 64

End point title	PASI Percent Improvement From Baseline at Week 64
-----------------	---

End point description:

The PASI is a measure of the average redness, thickness, and scaliness, each graded on a 0 to 4 scale, weighted by the area of involvement. PASI combines the assessment of the severity and the area affected into a single score in the range 0 (no disease) to 72 (maximal disease). PASI percent improvement is defined as $100 \times (\text{value at baseline} - \text{value at post-baseline visit}) / \text{value at baseline}$. A positive value indicates PASI improvement. Baseline data were derived based on observed data and at week 64 were derived based on multiple imputation (MI) data. Baseline was the last non-missing assessment prior to the first dose of IP. The per-protocol efficacy analysis set included all participants who were randomized and received all 3 doses of the assigned IP between week 28 and week 52 and did not experience an important protocol deviation that could affect the evaluation of the efficacy endpoints. The participants analyzed includes those imputed by MI as well as those with observed data.

Secondary: PASI 100 Response at Week 64

End point title	PASI 100 Response at Week 64
End point description:	
The PASI is a measure of the average redness, thickness, and scaliness, each graded on a 0 to 4 scale, weighted by area of involvement. PASI combines assessment of the severity and the area affected into a single score in the range 0 (no disease) to 72 (maximal disease). PASI response was defined as a participant meeting/surpassing a pre-specified threshold for percent improvement in PASI score compared to baseline. A participant with ≥ 100% improvement was a PASI 100 responder. Missing PASI 100 responses at week 64 were imputed by NRI. Baseline was the last non-missing assessment taken prior to the first dose of IP. The per-protocol efficacy analysis set included all participants who were randomized and received all 3 doses of assigned IP between week 28 and week 52 and who did not experience an important protocol deviation during the study that could affect the evaluation of the efficacy endpoints. The participants analyzed include those imputed by NRI and those with observed data.

Secondary: PASI 75 Response at Week 64

End point title	PASI 75 Response at Week 64
End point description:	
The PASI is a measure of the average redness, thickness, and scaliness, each graded on a 0 to 4 scale, weighted by the area of involvement. PASI combines the assessment of the severity and the area affected into a single score in the range 0 (no disease) to 72 (maximal disease). PASI response was defined as a participant meeting/surpassing a pre-specified threshold for percent improvement in PASI score compared to baseline. A participant with $\geq 75\%$ improvement was a PASI 75 responder. Missing PASI 75 responses at week 64 were imputed by non-responder imputation (NRI). Baseline was the last non-missing assessment prior to first dose of IP. The per-protocol efficacy analysis set included all participants who were randomized and received all 3 doses of the assigned IP between week 28 and week 52 and did not experience an important protocol deviation that could affect the evaluation of the efficacy endpoints. Secondary: Number of Participants with Treatment-emergent Adverse Events (TEAEs): Post-randomization Period

End point title	Number of Participants with Treatment-emergent Adverse Events (TEAEs): Post-randomization Period
-----------------	--

End point description:

TEAEs during the post-randomization period were defined as AEs that started on or after the first dose of investigational product post-randomization and prior to the end of study. The number of participants who experienced any TEAE, and who experienced a serious TEAE are presented. A serious TEAE was defined as any untoward medical occurrence that meets at least 1 of the following serious criteria: resulted in death (fatal), was life-threatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, congenital anomaly/birth defect, or other medically important serious event. Participants in the safety analysis set who completed all planned doses of investigational product in the post-randomization period up to week

52. The safety analysis set included all randomized participant who received at least 1 dose of investigational product post randomization.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality was collected from enrollment to the end of study visit, up to approximately 68 weeks. Adverse events were collected from Day 1 to end of study, up to 64 weeks.

Adverse event reporting additional description:

All-cause mortality is reported for all participants enrolled/randomized in the study. Serious adverse events and other adverse events are reported for all participants who received at least one dose of study drug.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 June 2021	<ul style="list-style-type: none">- change of sample size from 352 to 480 enrolled participants- updated verbiage of bioequivalence and PK equivalence to similarity and PK similarity- updated similarity margin from (0.77, 1.3) to (0.8, 1.25)- changed method for handling missing values for the PASI endpoint from last observation carried forward method to multiple imputation method- included PK and ADA samples at week 4- clarified tolerance windows for PK sample collection times- included human immunodeficiency virus serology at screening and electrocardiogram at baseline and weeks 16, 28, 40, and 52- updated inclusion/exclusion criteria- included electrocardiogram data analysis descriptive summary for the number of abnormal electrocardiograms- clarified that the concomitant medication for the run-in treated set was for the Run-in Period

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
