## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 December 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 October 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To estimate the efficacy of AZD7442 in the prevention of the composite endpoint of either severe COVID-19 or death from any cause through study Day 29

Protection of trial subjects:

This study is conducted in accordance with the protocol and with the following: Consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines; Applicable International Conference on Harmonisation (ICH)/Good Clinical Practice (GCP) Guidelines; Applicable laws and regulations. The protocol, protocol amendments, Informed Consent Form (ICF), Investigator Brochure, and other relevant documents (e.g. advertisements) must be submitted to an Institutional Review Board/Independent Ethics Committee (IRB/IEC) by the Investigator and reviewed and approved by the IRB/IEC before the study is initiated. Any amendments to the protocol will require IRB/IEC approval before implementation of changes made to the study design, except for changes necessary to eliminate an immediate hazard to study patients. Where applicable as per relevant laws and regulations, amendments will also be submitted to, reviewed and approved by regulatory authorities/national competent authorities.

## Subject disposition

### Recruitment

Recruitment details:

910 participants were randomized to receive treatment in study D8851C00001 (TACKLE) with AZD7442 (AZD8895 + AZD1061) or placebo. Of the 910 participants randomized, 903 (99.2%) received treatment with study drug. Of the 903 dosed, 452 (50.1%) participants received AZD7442 and 451 (49.9%) participants received placebo.

### Pre-assignment

Screening details:

In TACKLE, at the first visit, ie, the enrollment visit 1, participants were evaluated regarding the protocol mandated inclusion and exclusion criteria. After enrolment, eligible participants were randomized at a 1:1 ratio to receive a single dose of study provided AZD7442 (AZD8895 + AZD1061) or placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	AZD7442

Arm description:

Single dose of 600 mg of AZD7442 (2 separate IM injections) on Day 1

Arm type	Experimental
Investigational medicinal product name	Combination of 2 mAbs (AZD8895 and AZD1061)
Investigational medicinal product code	
Other name	tixagevimab-cilgavimab
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose (× 2 separate IM injections) of 600 mg of AZD7442 on Day 1.

<b>Arm title</b>	Placebo

Arm description:

Single dose of Placebo (2 separate IM injections) on Day 1

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose (× 2 separate IM injections) of saline placebo on Day 1.

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1014 total participants enrolled in the study but only 903 dosed, and we report results of these dosed participants (Full Analysis Set).

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: These participants are those who have non-missing results of key secondary endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug until end of study, with an average of 436 days.

Adverse event reporting additional description:

AEs are reported for the Safety Analysis Set, defined as all participants randomized and dosed with IMP.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 December 2020	Update to the key secondary objective and associated analysis estimand to include as intercurrent events, participants who are unblinded to be considered for COVID-19 vaccination. Consequential consistency change to Section 9.4.2.1 (Primary Endpoint).
26 February 2021	COVID places pregnant women at increased risk of poor outcomes and poor pregnancy outcomes (CDC, 2021). A fetal TCR study showed no binding of AZD7442 mAbs to any fetal tissues tested. Prior experience with antibody therapy against infectious diseases and with other mAbs suggests low risk in pregnancy. Therefore, the exclusion of pregnant or breast feeding women has been removed from the CSP.
10 March 2021	Pregnant women and breastfeeding mothers are excluded from the trial (Criterion 16) as there is insufficient data on the drug-associated risk of major birth defects, miscarriage, or adverse maternal or fetal outcomes or effects of the drug on the breastfed infant, or on milk production. All women of child bearing potential must have a negative pregnancy test result at Visit 1 (Criterion 8b). AstraZeneca acknowledges the risk for severe COVID-19 in pregnant women but would like to establish the risk/benefit profile in adults before including pregnant women in the clinical trial.
31 March 2021	Highly efficacious vaccines against SARS-CoV-2 are being deployed on a mass scale in the participating countries, leading to substantially decreasing attack rates for COVID-19 and reduced potential for study enrollment. Therefore, the interim analysis has been removed and the primary analysis adjusted so that it is completed 30 days after the 52nd event has occurred. This period, of 30 days, allows sufficient time for the 52nd event to be monitored, and any other events occurring during this time interval will also be evaluated. Enrollment will stop after the 52nd event has occurred.
21 April 2021	Amid a rising number of coronavirus disease 2019 (COVID-19) hospitalizations across the world, leading to a shortage of hospital beds, temporary facilities are being utilized increasingly to manage severe COVID-19 patients who would have usually been treated in a traditional hospital setting. As hospitalizations are an integral component of both the primary and key secondary endpoints in the study, further guidance is provided regarding what constitutes these temporary facility or alternate care sites used for managing participants with severe COVID-19.
05 July 2021	Due to regional differences in medical practice for COVID-19, the primary analysis population has been clarified to ensure that the efficacy of AZD7442 for the treatment of COVID-19 is assessed only in non-hospitalized adults.
18 March 2022	Cardiovascular & thrombotic events were added as AESIs which are described as potential risks in the latest IB version. A Cardiovascular Event Adjudication Committee was added to provide an independent, external, systematic, and unbiased assessment of de-identified blinded data to systematically evaluate CV events.
