## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Day 1 up to 24 months post-vaccination on Day 1 (Day 731).

Adverse event reporting additional description:

All-cause mortality and Serious AEs were analyzed on Full analysis set population. Other (not including serious) AEs as solicited and unsolicited AEs were collected and analyzed on a subset of FAS that is called safety subset. The safety subset included all participants that consented to the collection of AEs (solicited and unsolicited AEs).

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs which included solicited and unsolicited AEs were collected and analyzed in a subset of FAS that is called safety subset. The safety subset included all subjects that consented to the collection of AEs (solicited and unsolicited AEs).

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 May 2021	The purpose of this amendment was to follow recommendations from regulatory authorities (eg, update of the primary hypothesis of vaccine efficacy against RT-PCR- confirmed RSV mediated lower respiratory tract disease (LRTD), stratification and minimization factors for the randomization, secondary endpoints testing strategy).
19 July 2021	The purpose of this amendment was to align the information and guidance for investigators on signs and symptoms and on medical management of thrombosis with thrombocytopenia syndrome (TTS) events across the VAC18193 program.
10 November 2021	The purpose of this amendment was to align the protocol following comments from CBER that all cases meeting the programmed case definition of RT-PCR confirmed RSV lower respiratory tract disease (LRTD) should be reviewed by the Clinical Event Adjudication Committee (CEC).
08 April 2022	The purpose of this amendment was to available immunogenicity data generated in ongoing clinical studies with the Ad26/protein preF RSV vaccine suggest that immune responses after a single vaccination are durable beyond one year, and that a revaccination at Month 12 is likely not necessary for efficacy. Therefore, the second dose at Month 12 has been removed from the protocol.
11 October 2022	The purpose of this amendment was to provide clarification around the timing of the end-of-study analyses and population included, to align risk language with the most recent safety data available, and to provide additional clarification around follow-up that is conducted via phone call versus onsite visit.
