

Clinical trial results:

A randomised, double-blind, placebo-controlled, dose-ranging Phase 2b study to investigate the efficacy and safety of MBS2320 with background methotrexate (MTX) in participants with moderate to severe active rheumatoid arthritis (RA) who have had an inadequate response to MTX alone

Summary

EudraCT number	2020-005496-13

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 December 2023
Global end of trial reached?	Yes
Global end of trial date	28 December 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of MBS2320 (5 mg once daily, 20 mg once daily, and 40 mg once daily) compared with placebo in participants with active Rheumatoid arthritis (RA) on stable background Methotrexate (MTX) who have had an inadequate response to MTX alone, with confirmed intra-articular (IA) synovitis on baseline magnetic resonance imaging (MRI)

Protection of trial subjects:

The study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki, ICH GCP, and all applicable regulations. The investigator was responsible for providing written summaries of the progress and status of the study at intervals not exceeding 1 year or as otherwise specified by the IEC. The investigator promptly supplied the sponsor or its designee, the IEC, and, where applicable, the institution, with written reports on any changes significantly affecting the conduct of the study or increasing the risk to participants.

Background therapy:

Participants had to be on a stable once-weekly MTX dose regimen (15 to 25 mg per week, either as an oral or parenteral dose) for at least 56 days prior to the baseline visit. Participants also had to be on a stable dose of folic acid (or equivalent) for at least 56 days prior to the baseline visit. The investigator monitored for MTX toxicity for the duration of the study and adjusted the dose according to current clinical guidelines. Participants continued their prescribed dosing regimen of MTX and folic acid (or equivalent) throughout the study. Participants were permitted to use oral corticosteroid background therapy for RA as prescribed by a physician, unless otherwise excluded (see below), as long as the doses were stable for at least 4 weeks prior to the baseline visit and the daily dose did not exceed 10 mg prednisolone (or equivalent). Participants were also permitted to use oral or topical (but not both) NSAID background therapy for RA or therapies for other conditions as prescribed by a physician, unless otherwise excluded (see below), as long as the doses were stable for at least 4 weeks prior to the baseline visit. Short-term (up to 7 total days) of NSAIDs or analgesics for other indications (e.g. headaches) were permitted during the study.

Evidence for comparator:

This study is placebo-controlled and placebo is used for comparator.

Actual start date of recruitment	25 July 2022
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 17
Country: Number of subjects enrolled	Poland: 27
Country: Number of subjects enrolled	Czechia: 10
Country: Number of subjects enrolled	Bosnia and Herzegovina: 8

Country: Number of subjects enrolled	Chile: 60
Country: Number of subjects enrolled	Guatemala: 30
Country: Number of subjects enrolled	Mexico: 80
Country: Number of subjects enrolled	Serbia: 16
Worldwide total number of subjects	248
EEA total number of subjects	54

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	209
From 65 to 84 years	39
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Approximately 224 participants were planned to be enrolled into the 4 treatment groups (56 participants per group).

Pre-assignment

Screening details:

In total 414 participants were screened - 154 failed to meet inclusion/exclusion criteria and 12 withdrew consent during screening period. Remaining 248 participants were randomised and received at least one dose of either MBS2320 (186 participants: 62 randomised to 5 mg, 63 randomised to 20 mg and 61 randomised to 40 mg) or placebo (62 participants)

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	MBS2320 5 mg

Arm description:

MBS2320 5 mg once daily for 12 weeks

Arm type	Experimental
Investigational medicinal product name	MBS2320
Investigational medicinal product code	
Other name	Leramistat
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

MBS2320 5 mg once daily for 12 weeks used as an adjunct therapy to MTX (15 to 25 mg per week, either as an oral or parenteral dose)

Arm title	MBS2320 20 mg
------------------	---------------

Arm description:

MBS2320 20 mg once daily for 12 weeks

Arm type	Experimental
Investigational medicinal product name	MBS2320
Investigational medicinal product code	
Other name	Leramistat
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

MBS2320 20 mg once daily for 12 weeks used as an adjunct therapy to MTX (15 to 25 mg per week, either as an oral or parenteral dose)

Arm title	MBS2320 40 mg
------------------	---------------

Arm description:

MBS2320 40 mg once daily for 12 weeks

Arm type	Experimental
----------	--------------

Investigational medicinal product name	MBS2320
Investigational medicinal product code

Statistical analyses

Statistical analysis title	Logistic Regression model
Statistical analysis description: Logistic regression model included treatment and prognostic categorical factors: baseline use of corticosteroids for RA and qualitative screening ACPA.	
Comparison groups	MBS2320 5 mg v MBS2320 40 mg v MBS2320 20 mg v Placebo

Number of subjects included in analysis	248
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.963
Method	Regression, Logistic
Parameter estimate	Difference in ACR20Ic CCR Rate (%)
Point estimate	0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-15.3
upper limit	16

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The safety profile of MBS2320 in this 12-week study was favourable, with all doses assessed being generally well tolerated.

Assessment type	Systematic
