Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 October 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 September 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the anti-tumor activity of surufatinib in patients with low- to intermediate-grade (Grade 1 or Grade 2), well-differentiated neuroendocrine tumors (NET).

Protection of trial subjects:

This study was conducted in accordance with the protocol, the ethical principles derived from international guidelines, including the Declaration of Helsinki and/or all relevant federal regulations in compliance with International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use Harmonized Tripartite Guideline, Council for International Organizations of Medical Sciences International Ethical Guidelines, Good Clinical Practice guidelines, and according to the appropriate regulatory requirements in the countries where the study was conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 3
Country: Number of subjects enrolled	Spain: 30
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 6
Worldwide total number of subjects	78
EEA total number of subjects	69

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	40
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This Phase 2, open-label, multi-center study was conducted in patients with locally advanced or metastatic low to intermediate grade (Grade 1 or Grade 2), well-differentiated NETs. The study was terminated early based on strategic re-evaluation of clinical development program for surufatinib and not due to any safety concerns.

Pre-assignment

Screening details:

The study enrolled patients in 4 cohorts of varying NETs, as follows:

- Cohort A - NET of lung origin (NET, lung)
- Cohort B - NET of small bowel origin (NET, small bowel)
- Cohort C - NET of non-small bowel, non-pancreas, and non-lung origin (NET, other)
- Cohort D - NET of any origin (NET, any).

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A (NET, Lung)

Arm description:

Patients with NET of lung origin received surufatinib 300 milligrams (mg) orally once daily (QD) in treatment cycles of 28 days starting on Cycle (C)1 Day (D)1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm type	Experimental
Investigational medicinal product name	Surufatinib
Investigational medicinal product code	
Other name	HMPL-012
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Surufatinib 300 mg was administered orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm title	Cohort B (NET, Small Bowel)
------------------	-----------------------------

Arm description:

Patients with NET of small bowel origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm type	Experimental
Investigational medicinal product name	Surufatinib
Investigational medicinal product code	
Other name	HMPL-012
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Surufatinib 300 mg was administered orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm title	Cohort C (NET, Other)
------------------	-----------------------

Arm description:

Patients with NET of non-small bowel, non-pancreas, and non-lung origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm type	Experimental
Investigational medicinal product name	Surufatinib
Investigational medicinal product code	
Other name	HMPL-012
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Surufatinib 300 mg was administered orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm title	Cohort D (NET, Any)
------------------	---------------------

Arm description:

Patients with NET of any origin received a single dose of drug cocktail (midazolam 2.5 mg, fexofenadine 30 mg and rosuvastatin 10 mg) on Day -2 followed by surufatinib 300 mg orally QD from C1D1 to C1D14. On C1D15, a single dose of surufatinib 300 mg and a single dose of drug cocktail as above was administered. Patients received surufatinib 300 mg orally QD from C1D16 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Arm type	Experimental
Investigational medicinal product name	Surufatinib
Investigational medicinal product code	
Other name	HMPL-012
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Surufatinib 300 mg was administered orally QD as mentioned in the protocol.

Investigational medicinal product name	Midazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral liquid
Routes of administration	Oral use

Dosage and administration details:

Midazolam 2.5 mg was administered as a part of drug cocktail as per protocol to patients in Cohort D.

Investigational medicinal product name	Fexofenadine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension, Tablet
Routes of administration	Oral use

Dosage and administration details:

Fexofenadine 30 mg was administered as a part of drug cocktail as per protocol to patients in Cohort D.

Investigational medicinal product name	Rosuvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rosuvastatin 10 mg was administered as a part of drug cocktail as per protocol to patients in Cohort D.

Baseline characteristics

Reporting groups

Reporting group title	Cohort A (NET, Lung)
Reporting group description: Patients with NET of lung origin received surufatinib 300 milligrams (mg) orally once daily (QD) in treatment cycles of 28 days starting on Cycle (C)1 Day (D)1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort B (NET, Small Bowel)
Reporting group description: Patients with NET of small bowel origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort C (NET, Other)
Reporting group description: Patients with NET of non-small bowel, non-pancreas, and non-lung origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort D (NET, Any)
Reporting group description: Patients with NET of any origin received a single dose of drug cocktail (midazolam 2.5 mg, fexofenadine 30 mg and rosuvastatin 10 mg) on Day -2 followed by surufatinib 300 mg orally QD from C1D1 to C1D14. On C1D15, a single dose of surufatinib 300 mg and a single dose of drug cocktail as above was administered. Patients received surufatinib 300 mg orally QD from C1D16 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

End points

End points reporting groups

Reporting group title	Cohort A (NET, Lung)
Reporting group description: Patients with NET of lung origin received surufatinib 300 milligrams (mg) orally once daily (QD) in treatment cycles of 28 days starting on Cycle (C)1 Day (D)1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort B (NET, Small Bowel)
Reporting group description: Patients with NET of small bowel origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort C (NET, Other)
Reporting group description: Patients with NET of non-small bowel, non-pancreas, and non-lung origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	
Reporting group title	Cohort D (NET, Any)
Reporting group description: Patients with NET of any origin received a single dose of drug cocktail (midazolam 2.5 mg, fexofenadine 30 mg and rosuvastatin 10 mg) on Day -2 followed by surufatinib 300 mg orally QD from C1D1 to C1D14. On C1D15, a single dose of surufatinib 300 mg and a single dose of drug cocktail as above was administered. Patients received surufatinib 300 mg orally QD from C1D16 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.	

Primary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR) ^[1]
End point description: The DCR was defined as the percentage of patients who achieved a best overall response (BOR) of complete response (CR), partial response (PR) or stable disease (SD) as determined by the Investigator using Response Evaluation Criteria in Solid Tumors (RECIST) version (v)1.1. The CR was defined as disappearance of all target lesions. The PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum of diameters. SD was defined as neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for progressive disease (PD), taking as reference the smallest sum on study. The efficacy analysis set included all patients who received at least 1 dose of surufatinib and had at least 1 post-baseline tumor assessment.	
End point type	Primary
End point timeframe: RECIST assessments performed at screening (within 28 days before start of study drug), every 8 weeks for the first 24 weeks from C1D1, then every 12 weeks thereafter until the occurrence of disease progression, up to approximately 36 months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, no statistical analysis is presented.

Secondary: Plasma Concentrations of Surufatinib

End point title	Plasma Concentrations of Surufatinib
-----------------	--------------------------------------

End point description:

Blood samples were collected at specified timepoints to obtain plasma concentrations of surufatinib at steady state on Cycle 1 Day 15. The pharmacokinetic (PK) analysis set included all patients who received at least 1 dose of the study drug and had at least 1 measurable plasma concentration data point for at least 1 PK analyte without protocol violations or events with potential to affect the PK concentration. Here, n=only those participants with data collected at specified timepoints and 99999=no data as there were no participants analyzed for that timepoint for that cohort.

End point type	Secondary

Secondary: Cohort D: Geometric Least Squares (LS) Mean Ratio of Cytochrome P450 (CYP3A4), P-glycoprotein (P-gp) and Breast Cancer Resistance Protein (BCRP) Substrates at Cycle 1 Day 15 to Baseline

End point title	Cohort D: Geometric Least Squares (LS) Mean Ratio of Cytochrome P450 (CYP3A4), P-glycoprotein (P-gp) and Breast Cancer Resistance Protein (BCRP) Substrates at Cycle 1 Day 15 to Baseline ^[2]
-----------------	--

End point description:

Participants were administered midazolam, fexofenadine and rosuvastatin (as part of the drug cocktail) as a single dose on Day -2 (without surufatinib) and on Cycle 1 Day 15 (with surufatinib). Separate blood samples were collected for measurement of plasma concentrations of each probe substrate and surufatinib. Probe substrate of midazolam was CYP3A4, fexofenadine was P-gp and rosuvastatin was BCRP. Ratio of LS Mean for maximum plasma concentration (C_{max}), area under the plasma concentration-time curve from time 0 to time of last measurable concentration (AUC_{0-t}) and area under the plasma concentration-time curve from time 0 to infinity (AUC_{0-inf}) are presented as Cycle 1 Day 15/Day -2. The PK evaluable population included all patients who received at least 1 dose of the study drug and had sufficient concentration data to derive at least 1 PK parameter.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Day -2) and Cycle 1 Day 15

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only Cohort D is evaluated for this endpoint.

End point values	Cohort D (NET, Any)			
Subject group type	Reporting group			
Number of subjects analysed	6			
Units: Ratio of geometric LS mean				
number (confidence interval 90%)				
Midazolam (CYP3A4 substrate), Cmax	1.69 (1.20 to 2.39)			
Midazolam (CYP3A4 substrate), AUC0-t	1.70 (1.14 to 2.52)			
Midazolam (CYP3A4 substrate), AUC0-inf	1.71 (1.16 to 2.53)			
Fexofenadine (P-gp substrate), Cmax	2.03 (1.51 to 2.75)			
Fexofenadine (P-gp substrate), AUC0-t	2.12 (1.65 to 2.73)			
Fexofenadine (P-gp substrate), AUC0-inf	2.14 (1.64 to 2.78)			
Rosuvastatin (BCRP substrate), Cmax	2.23 (1.59 to 3.14)			
Rosuvastatin (BCRP substrate), AUC0-t	2.13 (1.31 to 3.48)			
Rosuvastatin (BCRP substrate), AUC0-inf	2.23 (1.23 to 4.01)

Secondary: Number of Patients With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)

End point title	Number of Patients With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical study patient temporally associated with the use of a study drug, whether or not considered related to the drug. An SAE was an AE that resulted in any of the following outcomes: death; was life threatening; required inpatient hospitalization or prolongation of existing hospitalization; resulted persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions; a congenital anomaly/birth defect or was any important medical event. TEAEs were defined as any AEs that started or worsened in severity on or after the first administration date of study drug and no later than 30 (+7) days after the last administration date of study drug or initiation of new anti-tumor therapy (whichever occurred first). The safety analysis set included all patients who received at least 1 dose of surufatinib.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first dose of study drug (Day 1) up to 30 days after last dose of study drug, approximately 33 months

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from the first dose of study drug (Day 1) up to 30 days after last dose of study drug, approximately 33 months. Deaths were collected from screening (Day -28) up to end of follow-up, approximately 36 months

Adverse event reporting additional description:

The safety analysis set included all patients who received at least 1 dose of surufatinib.

Reporting groups

Reporting group title	Cohort A (NET, Lung)
-----------------------	----------------------

Reporting group description:

Patients with NET of lung origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Reporting group title	Cohort B (NET, Small Bowel)
-----------------------	-----------------------------

Reporting group description:

Patients with NET of small bowel origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Reporting group title	Cohort C (NET, Other)
-----------------------	-----------------------

Reporting group description:

Patients with NET of non-small bowel, non-pancreas, and non-lung origin received surufatinib 300 mg orally QD in treatment cycles of 28 days starting on C1D1 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

Reporting group title	Cohort D (NET, Any)
-----------------------	---------------------

Reporting group description:

Patients with NET of any origin received a single dose of drug cocktail (midazolam 2.5 mg, fexofenadine 30 mg and rosuvastatin 10 mg) on Day -2 followed by surufatinib 300 mg orally QD from C1D1 to C1D14. On C1D15, a single dose of surufatinib 300 mg and a single dose of drug cocktail as above was administered. Patients received surufatinib 300 mg orally QD from C1D16 until disease progression, death, unacceptable toxicity, withdrawal of consent or lost to follow-up.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 February 2021	Revision of eligibility criteria. Minor clarifications.
23 June 2021	Added clarifications per health authority request. Removed proton pump inhibitors from the list of prohibited therapies and instructions to avoid proton pump inhibitors. Clarified the screening pregnancy test was to be completed within 7 days before the start of surufatinib treatment. Removed C1D2 visit; added screening visit range Day -7 to 1. Added provision to allow enrollment of additional patients. Minor clarifications and modifications for consistency.
12 August 2021	Added clarifications about enrollment. Addressed Ethic Committee comments. Minor clarifications and addition of United States sites.
01 March 2022	Language was updated to reflect company name change and throughout the document for clarity. Updated total enrollment.
05 December 2022	Language updated for clarity throughout the document. The addition of the time window was intended to provide flexibility in obtaining patient assessments relative to dosing.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Based upon the strategic reevaluation of the clinical development program for surufatinib in Europe and the US, the study was terminated. The termination was not based on any concern for patient safety or efficacy relative to surufatinib treatment.

Notes:
