Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 June 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of the study was to evaluate the safety and effects of onabotulinumtoxinA (BOTOX) for the temporary improvement in the appearance of platysma prominence.

Study doctors randomized subjects into 1 of the 2 groups, called treatment arms. There was a 1 in 2 chance that a subject was assigned to placebo. Approximately 400 subjects were to be enrolled in the study across approximately 35 sites in USA, Belgium, Canada, Germany and the UK.

Subjects received a single treatment of intramuscular injection of onabotulinumtoxinA (BOTOX) or placebo on Day 1 during this 4 month long study.

Subjects attended regular monthly visits during the study at the study site.

Protection of trial subjects:

Subjects read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 16
Country: Number of subjects enrolled	Canada: 59
Country: Number of subjects enrolled	Germany: 76
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 265
Worldwide total number of subjects	426
EEA total number of subjects	92

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	417
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

426 subjects were enrolled and randomized into the study (ITT Population); 209 to BOTOX and 217 to placebo. A total of 208 subjects were treated with BOTOX and 216 subjects were treated with placebo (Safety Analysis Set). A total of 381 subjects were included in the modified ITT (mITT) Population; 186 to BOTOX and 195 to placebo.

Pre-assignment

Screening details:

The mITT Population (N=381) included all randomized subjects with a baseline summary score ≥ 19 on the ANLFQ: Impacts questionnaire and was used for the reported efficacy analyses. The Safety Analysis Set (N=424) included all subjects treated with at least 1 dose of study drug and was used for all safety analyses.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo was injected into the platysma muscle on Day 1

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Saline injection
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Intramuscular use

Dosage and administration details:

Placebo was injected into the platysma muscle on Day 1

Arm title	BOTOX
------------------	-------

Arm description:

BOTOX (OnabotulinumtoxinA) was injected into the platysma muscle on Day 1

Arm type	Experimental
Investigational medicinal product name	OnabotulinumtoxinA
Investigational medicinal product code	
Other name	BOTOX
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Intramuscular use

Dosage and administration details:

BOTOX was injected into the platysma muscle on Day 1
