

Clinical trial results:

A Multicenter, Randomized, Double-blind Study Evaluating the Pharmacokinetics, Efficacy, Safety, and Immunogenicity of Multiple Switches Between Humira (adalimumab [US]) and ABP 501 Compared With Continued Use of Adalimumab in Subjects With Moderate to Severe Plaque Psoriasis

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 December 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 December 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study is to demonstrate similarity of pharmacokinetics (PK) in participants after multiple switches between adalimumab (Humira®) 100 mg/mL and ABP 501 100 mg/mL, compared to participants receiving continued use of adalimumab 100 mg/mL.

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guideline E6 (R1)/Integrated Addendum E6 (R2); 21 Code of Federal Regulations Parts 50, 56, and 312; requirements for the conduct of clinical studies as provided in the European Union (EU) Directive 2001/20/EC; the consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines; and all applicable laws and regulatory requirements.

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 143
Country: Number of subjects enrolled	Germany: 38
Country: Number of subjects enrolled	Latvia: 14
Country: Number of subjects enrolled	Estonia: 9
Country: Number of subjects enrolled	United States: 151
Country: Number of subjects enrolled	Canada: 70
Worldwide total number of subjects	425
EEA total number of subjects	204

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	384
From 65 to 84 years	41
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 425 participants were enrolled in the study at 83 centers across 6 countries (Canada, Estonia, Germany, Latvia, Poland, and the US) between October 2021 and December 2022.

Pre-assignment

Screening details:

Participants were enrolled into period 1 of the study (Lead-in Period) and received adalimumab subcutaneously (SC) during 12 week. Participants who responded to treatment during Period 1 (achieving PASI \geq 50) were randomized to Period 2 to either the Continued-use Group or the Switching Group. Period 2 lasted 20 weeks from Week 12 to Week 32.

Period 1

Period 1 title	Period 1 (Lead-in period)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Arm title	Period 1 (Lead-in period)
-----------	---------------------------

Arm description:

Participants with plaque psoriasis (Ps) received adalimumab 100 mg/mL SC from Week 1 to Week 12 for a total of 6 doses (Week 1/Day 1 [80 mg], Week 2/Day 8 [40 mg], Week 4, Week 6, Week 8, and Week 10 [40 mg]) during the Lead-in Period.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Period 1 (Lead-in period)
Started	425
Completed	380
Not completed	45
Adverse event, serious fatal	1
Consent withdrawn by subject	6
Adverse event, non-fatal	6
Not indicated	1
Lost to follow-up	3
Lack of efficacy	23
Protocol deviation	5

Period 2

Period 2 title	Period 2
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Period 2 (Switching Group)
------------------	----------------------------

Arm description:

Participants with Ps who responded to treatment (achieving PASI \geq 50) in Period 1, were randomised to the Switching Group from Week 12 to Week 32 in Period 2 of the study. Participants received ABP 501 Q2W (Week 12 and Week 14 [40 mg]), adalimumab Q2W (Week 16 and Week 18 [40 mg]), and again ABP 501 Q2W (Week 20, Week 22, Week 24, Week 26, Week 28 [40 mg]).

Arm type	Experimental
Investigational medicinal product name	ABP 501
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

40 mg Q2W at Week 12, Week 14, Week 20, Week 22, Week 24, Week 26, and Week 28

Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

40 mg Q2W at Week 16 and Week 18

Arm title	Period 2 (Continued-use Group)
------------------	--------------------------------

Arm description:

Participants with Ps who responded to treatment achieving PASI \geq 50 in Period 1, were randomised to the Continued-use Group from Week 12 to Week 32 in Period 2 of the study. Participants continued receiving adalimumab 40 mg Q2W.

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

40 mg Q2W from Week 12 to Week 28

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Baseline characteristics are presented for participants who responded to treatment during Period 1 (achieving PASI \geq 50) and were randomized in Period 2.

Number of subjects in period 2 ^[2]	Period 2 (Switching Group)	Period 2 (Continued-use Group)
Started	186	194
Completed	174	173
Not completed	12	21
Consent withdrawn by subject	4	9
Adverse event, non-fatal	3	6
Lost to follow-up	5	5
Protocol deviation	-	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are presented for participants who responded to treatment during Period 1 (achieving PASI \geq 50) and were randomized in Period 2. The worldwide number enrolled in the study includes participants in the Lead-in Period.

Baseline characteristics

Secondary: PASI Percent Improvement From Baseline (Day 1) to Week 30

End point title	PASI Percent Improvement From Baseline (Day 1) to Week 30
End point description:	
<p>The PASI measures the average redness (erythema), thickness (induration), and scaliness (each graded on a 0 to 4 scale) of psoriasis lesions, weighted by the area of involvement in the four main body areas (i.e., head and neck, trunk, upper extremities, and lower extremities). PASI scores can range from 0.0 to 72.0, with higher scores indicating greater severity and/or more extensive psoriasis. Percent improvement from baseline was calculated as (value at baseline - value at post-baseline visit) × 100 / (value at baseline). Results are presented for the per-protocol efficacy analysis set as observed, which consisted of all participants who were randomized and received all assigned doses post randomization and who had not experienced an important protocol deviation that could affect the efficacy endpoints.</p>
