

Clinical trial results:

An open-label, multi-center, phase II platform study evaluating the efficacy and safety of NIS793 and other new investigational drug combinations with SOC anti-cancer therapy for the 2L treatment of metastatic colorectal cancer (mCRC)

Summary

EudraCT number	2021-000553-40
Trial protocol	CZ DE HU ES BE IT FR
Global end of trial date	20 January 2025

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 January 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 January 2025
Global end of trial reached?	Yes
Global end of trial date	20 January 2025
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to evaluate the preliminary efficacy and safety of NIS793 and other novel investigational combinations with standard of care (SOC) anti-cancer therapy versus SOC anti-cancer therapy for the second-line treatment of mCRC.

This study aimed to explore whether different mechanisms of action could reverse resistance and improve responsiveness to the then-considered SOC anti-cancer therapy in the second-line metastatic colorectal cancer (mCRC) setting.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 8
Country: Number of subjects enrolled	Belgium: 13
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Czechia: 15
Country: Number of subjects enrolled	Germany: 30
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Hong Kong: 4
Country: Number of subjects enrolled	Israel: 5
Country: Number of subjects enrolled	Italy: 17
Country: Number of subjects enrolled	Japan: 22
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Singapore: 3
Country: Number of subjects enrolled	Spain: 33
Country: Number of subjects enrolled	Switzerland: 2
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United Kingdom: 11

Country: Number of subjects enrolled	United States: 16
Worldwide total number of subjects	202
EEA total number of subjects	114

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	149
From 65 to 84 years	53
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study spanned 17 countries with multiple centers: Australia (3), Belgium (3), Canada (4), Switzerland (1), Czech Republic (3), Germany (8), Spain (5), France (3), UK (3), Hong Kong (2), Israel (2), Italy (3), Japan (5), Korea (1), Singapore (1), Taiwan (2), USA (7).

Pre-assignment

Screening details:

Not Completed = Discontinued from treatment phase

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Safety Run-In Arm 1: NIS793 + SoC (FOLFIRI)

Arm description:

Safety Run-In (Investigational Arm 1): NIS793 in combination with Standard of Care (bevacizumab and FOLFIRI)

Arm type	Experimental
Investigational medicinal product name	NIS793
Investigational medicinal product code	
Other name	NIS793
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Investigational drug NIS793 was administered intravenously (IV) at the dose and schedule determined in the safety run-in part

Investigational medicinal product name	FOLFIRI
Investigational medicinal product code	
Other name	5FU+Leucovorin+Irinotecan
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5-fluorouracil [administered as a continuous infusion], leucovorin [administered IV] (or levoleucovorin [administered IV]), and irinotecan [administered IV]

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Bevacizumab
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bevacizumab was administered intravenously (IV)

Arm title	Safety Run-In Arm 1: NIS793 + SoC (mFOLFOX6)
------------------	--

Arm description:

Safety Run-In (Investigational Arm 1): NIS793 in combination with Standard of Care (bevacizumab and modified FOLFOX6 (mFOLFOX6))

Arm type	Experimental
----------	--------------

Investigational medicinal product name	NIS793
Investigational medicinal product code	
Other name	NIS793
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Investigational drug NIS793 was administered intravenously (IV) at the dose and schedule determined in the safety run-in part

Investigational medicinal product name	Modified FOLFOX6
Investigational medicinal product code	
Other name	5FU+Leucovorin+Oxaliplatin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5-fluorouracil [administered as a continuous infusion], leucovorin [administered IV] (or levoleucovorin [administered IV]), and oxaliplatin [administered IV]

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Bevacizumab
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bevacizumab was administered intravenously (IV)

Arm title	Safety Run-In Arm 2: NIS793 + TISLE + SoC (FOLFIRI)
------------------	---

Arm description:

Safety Run-In (Investigational Arm 2): NIS793 and Tislelizumab in combination with Standard of Care (bevacizumab and FOLFIRI)

Arm type	Experimental
Investigational medicinal product name	NIS793
Investigational medicinal product code	
Other name	NIS793
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Investigational drug NIS793 was administered intravenously (IV) at the dose and schedule determined in the safety run-in part

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Bevacizumab
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bevacizumab was administered intravenously (IV)

Investigational medicinal product name	FOLFIRI
Investigational medicinal product code	
Other name	5FU+Leucovorin+Irinotecan
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5-fluorouracil [administered as a continuous infusion], leucovorin [administered IV] (or levoleucovorin [administered IV]), and irinotecan [administered IV]

Investigational medicinal product name	Tislelizumab
Investigational medicinal product code	
Other name	VDT482
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Investigational drug tislelizumab was administered intravenously (IV)	
Arm title	Safety Run-In Arm 2: NIS793 + TISLE + SoC (mFOLFOX6)
Arm description:

Subject analysis set description:

Safety Run-In (Investigational Arm 2): NIS793 and Tislelizumab in combination with Standard of Care (FOLFIRI and modified FOLFOX6 (mFOLFOX6))

Primary: (Safety run-in part) Number of participants with dose limiting toxicities (DLTs) during the first cycle (4 weeks) of treatment.

End point title	(Safety run-in part) Number of participants with dose limiting toxicities (DLTs) during the first cycle (4 weeks) of treatment. ^{[1][2]}
-----------------	---

End point description:

The primary endpoint for the Safety Run-In part was the incidence of dose-limiting toxicities (DLT) during the first 28 days of treatment with investigational drug(s) (NIS793 with or without tislelizumab) and standard of care anti-cancer therapy. Dose tolerability decisions were based on all safety data and a Bayesian Logistic Regression Model (BLRM) using Escalation with Overdose Control (EWOC) criteria. Dose confirmation required at least six evaluable participants, fulfillment of EWOC criteria, and recommendation by Novartis and investigators after reviewing clinical, pharmacokinetic, and laboratory data.

End point type	Primary
----------------	---------

End point timeframe:

Up to 4 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Endpoint applicable to Safety run-in part only

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Endpoint applicable to Safety run-in part only

End point values	Safety Run-In Arm 1: NIS793 + SoC (FOLFIRI)	Safety Run-In Arm 1: NIS793 + SoC (mFOLFOX6)	Safety Run-In Arm 2: NIS793 + TISLE + SoC (FOLFIRI)	Safety Run-In Arm 2: NIS793 + TISLE + SoC (mFOLFOX6)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were recorded from first dose of study medication to 30 days after the last dose of Standard of Care, assessed up to approximately 38 months. Safety Run-in lasted about 162.5 days (5.4 months), and Expansion lasted about 221.3 days (7.4 months).

Adverse event reporting additional description:

For both the Safety run-in and Expansion phases, the Safety population comprised all participants who received at least one dose of any study drug, including incomplete infusions, with data pooled by treatment arm. In the Expansion phase, two participants were mis-randomized to NIS793 + SoC (FOLFIRI) but actually received NIS793 + SoC (mFOLFOX6).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 November 2021	Amendment 1: The key purpose of this amendment was to add additional treatment arm(s) with new investigational drug(s) in combination with SoC anti-cancer therapy for the second-line treatment of mCRC.
20 September 2022	Amendment 2: The main purpose of this amendment was to clarify independent determination of RP2D for each of the tested regimens, as RP2D for each investigational arm were different for the combination with FOLFIRI and mFOLFOX6, depending on the tolerability of each regimen.
30 May 2023	Amendment 3 (withdrawn on 01-Sep-2023): The key purpose of this amendment was to update the relevant protocol sections to reflect the latest changes made in the Investigator's Brochure Edition 8. Amendment 3 was released on 30-May-2023. On 31 Jul 2023 a communication instructing all participants to discontinue treatment with NIS793 and hold tislelizumab was issued. On 01-Sep-2023, an investigator notification was issued requesting withdrawal of amendment 3 and the corresponding Informed Consent Form (ICFs) in cases where the documents were already submitted to HAs and/or ECs/IRBs, because the newly introduced changes were no longer applicable. Amendment 3 was not implemented in any countries/sites. All countries/sites continued to operate under amendment 2. However, approvals were granted by the Health Authority of Germany and an EC of a single site in Hong Kong and Australia and could not be withdrawn. Accordingly, in these sites, amendment 3 was replaced by amendment 4.
11 March 2024	Amendment 4: As of 20-Feb-2024, 205 participants had been enrolled in the study and 20 were still receiving SoC therapy. Specifically, 39 participants enrolled in the SRI Part (22 in Arm 1, 16 in Arm 2, 1 discontinued at C1D1) and 166 participants enrolled in the Expansion Part (81 in Arm 1, 31 in Arm 2, 53 in Control arm, 1 discontinued at C1D1). No participants were receiving NIS793 nor tislelizumab in the study. Following the daNIS-2 study (CNIS793B12301) DMC's recommendation to stop administration of NIS793 to participants with PDAC, Novartis also decided to halt daNIS-3 study screening and enrollment of new participants, a communication for this was released on 12-Jul-2023. On 31-Jul-2023 the daNIS-3 DMC recommended to stop NIS793 and tislelizumab treatment due to an unfavorable benefit-risk profile observed in the investigational treatment arms in participants with mCRC. Based on the available data, NIS793 showed a deleterious PFS signal and a trend in reduced OS compared to SoC in participants with mCRC. The participant could continue to receive SoC therapy, as per Investigator's assessment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please go to <https://www.novctrd.com/#/> for complete trial results
