Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 March 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 March 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of entospletinib (ENTO) compared to placebo when added to chemotherapy in previously untreated nucleophosmin 1-mutated (NPM1-m) acute myeloid leukemia (AML), as defined by the rate of molecularly defined measurable residual disease (MRD).

Protection of trial subjects:

Study site personnel must obtain signed informed consent before any study-specific procedures (including central laboratory screening for the presence of NPM1 and fms like tyrosine kinase 3 [FLT3] mutations) were conducted, unless these were part of the standard of care, and must document the informed consent process in the subject's medical record. Consent must be obtained using the most current version of informed consent form (ICF) approved by the study site's Institutional Review Board/Independent Ethics Committee. Once the subject had signed the ICF, that indicated the beginning of the 14-day Screening Period.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 November 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 3
Country: Number of subjects enrolled	Czechia: 4
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Spain: 5
Worldwide total number of subjects	15
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 5 countries including the Czechia, France, Republic of Korea, Spain, and the United States from 24 November 2021 to 30 March 2023.

Pre-assignment

Screening details:

In this study subjects were randomized 1:1 to receive intensive chemotherapy in combination with either the spleen tyrosine kinase inhibitor, ENTO, or placebo. Randomization was stratified by age (< 60 vs ≥ 60 years) and anthracycline administered during induction (daunorubicin vs idarubicin).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	ENTO

Arm description:

Subjects received ENTO twice daily (BID), along with intensive chemotherapy (cytarabine and anthracycline) by continuous intravenous (IV) infusion (cytarabine) or slow IV push (anthracycline).

Arm type	Experimental
Investigational medicinal product name	Entospletinib
Investigational medicinal product code	ENTO
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received ENTO BID, along with intensive chemotherapy (cytarabine and anthracycline) by continuous IV infusion (cytarabine) or slow IV push (anthracycline).

Arm title	Placebo
------------------	---------

Arm description:

Subjects received placebo BID, along with intensive chemotherapy (cytarabine and anthracycline) by continuous IV infusion (cytarabine) or slow IV push (anthracycline).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received placebo BID, along with intensive chemotherapy (cytarabine and anthracycline) by continuous IV infusion (cytarabine) or slow IV push (anthracycline).

Number of subjects in period 1	ENTO	Placebo
Started	8	7
Completed	0	0
Not completed	8	7
Adverse event, serious fatal	2	1
Consent withdrawn by subject	-	1
Physician decision	-	1
Study terminated by Sponsor	5	4
Reason not specified	1	-

Primary: Measurable Residual Disease (MRD) Negative Complete Response (CR) Rate

End point title	Measurable Residual Disease (MRD) Negative Complete Response (CR) Rate ^[1]
End point description: MRD negative CR requires CR as defined by the European Leukemia Network (ELN) 2017 criteria (with minor modification for neutrophil and platelet count thresholds as defined by International Working Group [IWG]) as assessed by study site investigators, and MRD negativity (<0.01%) in bone marrow as measured by a molecular NPM1-m assay (eg, next generation sequencing) in a central laboratory upon recovery of peripheral blood counts following completion of 2 cycles of chemotherapy, no later than Day 42 of Cycle 2. Data not collected as the study was terminated early.	
End point type	Primary
End point timeframe: Cycle 1 Day 1, up to Day 42 of chemotherapy cycle 2 (Cycle length = 42 days).	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Data not collected as the study was terminated early.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects Who Experienced Treatment-emergent Adverse Events (TEAEs)

End point title	Number of Subjects Who Experienced Treatment-emergent Adverse Events (TEAEs)
-----------------	--

End point description:

TEAEs were defined as all events beginning or worsening from Cycle 1, Day 1 through 30 days following study treatment completion, was recorded according to the most current version of the Medical Dictionary for Regulatory Activities (MedDRA).

Clinically significant changes in safety laboratory assessments, electrocardiograms, echocardiogram/multi-gated acquisition (MUGA) scans and Eastern Cooperative Oncology Group performance status (ECOG PS) findings, as assessed by the Investigator, were recorded as TEAEs. Safety Analysis Set: All subjects who received at least one dose of study medication.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 Day 1, to 30 days following study treatment completion (Cycle length = 42 days), maximum up to 198 days.

End point values	ENTO	Placebo

Number of subjects analysed	8	7		
Units: Number of Subjects	8	7		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious adverse events and deaths were collected from signing informed consent through 30 days after treatment completion, up to 212 days. Other adverse events were collected from Cycle 1 Day 1 through 30 days after treatment completion, up to 198 days.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 July 2021	<p>Protocol Amendment 1: The description of induction treatment failure for purposes of event-free survival estimation was modified to "failure to achieve morphologic CR after completion of the last cycle of induction chemotherapy (no later than day 42 of the last cycle of induction)."</p> <ul style="list-style-type: none">-Revisions were made to clarify the requirements for bone marrow examination.-Amendment 1.0 changed the requirement for all subjects to receive 2 cycles of induction to administration of a second induction cycle contingent upon response to the initial induction cycle. A schematic depiction of study treatment from Cycle 1 Day 1 through completion of Chemotherapy Cycle 2 was added.-"Failure to achieve (or maintain) CR, CRh, or complete remission with incomplete blood count recovery (CRI) post-Chemotherapy Cycle 2" was added as a reason for study treatment discontinuation.-It was clarified that response assessments would be in accordance with the European LeukemiaNet (ELN) criteria but with minor modification for neutrophil and platelet count thresholds for a response of CR, as defined by International Working Group (IWG) criteria.-A statement of estimand for the primary endpoint was added.-Updates and clarifications were included for analyses of the secondary endpoints, event-free survival, relapse-free survival, and overall survival.-Additional explanatory details regarding the function of the DMC with implications for its role to oversee both safety and efficacy (or futility) for this trial were provided.
24 November 2021	<p>Protocol Amendment 1.1: -The benefit/risk section was revised to include Leukemia & Lymphoma Society Study BAML-16-001-S6 data collected through 01 October 2021.</p> <ul style="list-style-type: none">-A section on COVID-19 considerations was added. Reference to the FDA guidance regarding risk mitigation efforts in clinical trial conduct during the COVID-19 pandemic era was removed in response to request from the Bundesinstitut für Arzneimittel und Medizinprodukte (BfArM – Federal Institute for Drugs and Medical Devices). This was replaced with reference to European Union (EU) specific-guidances.-Screening for HIV was added to the study procedures.-Clarification regarding the timeframe for serious adverse event (SAE) reporting was added.-Pregnancy was added as a discontinuation criterion.
27 January 2022	<p>Protocol Amendment 2: -Changes introduced in country-specific Amendment 1.1 were incorporated into this global amendment.</p> <ul style="list-style-type: none">-Modifications to allow for bone marrow examination up to Day 42 of Induction Cycle 1 in order to allow for recovery of peripheral blood counts before assigning remission status were included.-Requirements were added for ANC and platelet count to recover to $> 1 \times 10^9/L$ and $> 100 \times 10^9/L$, respectively, prior to initiation of Consolidation Cycle 1 to allow for identification of subjects who achieved morphologic CR post-Induction Cycle 1 (based both on bone marrow and peripheral blood criteria) and for consistency with post-Chemotherapy Cycle 2.-A blanket exclusion was added for subjects with concurrent fms-like tyrosine kinase 3 (FLT3) mutation (including those without prior access to midostaurin).-Language was added allowing subjects who were HIV positive to enroll provided they met specific entry criteria.-Contraceptive guidance was revised to emphasize the lack of a known potential drug-drug interaction between ENTO and hormonal contraceptives that could potentially reduce their efficacy. Language was added to require the use of a barrier method (eg, male condom) in addition to one of the highly effective methods of contraception listed.-Appendix 9: Guidance on the Management of Clinical Trials During COVID-19 Pandemic was updated to include both US and EU guidances.

10 February 2022	Protocol Amendment 3: Clarification regarding the timeframe and procedures for SAE reporting was added.
------------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Early termination was due to significant challenges associated with enrollment of subjects with genetically-defined, newly diagnosed, AML who are candidates for intensive induction therapy and other challenges associated with post-COVID impacts.

Notes:
