#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 November 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 November 2022
Global end of trial reached?	Yes
Global end of trial date	16 November 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of the study was to assess if the study medication (molnupiravir, MK-4482) would prevent symptomatic coronavirus disease 2019 (COVID-19) in adults who lived with someone with confirmed COVID-19 infection. This was a phase 3, multicenter, randomized, double-blind, placebo-controlled study; half of the study participants received molnupiravir twice daily by mouth and the other half received a placebo. The primary objectives of the study were to determine if molnupiravir prevented symptomatic COVID-19 disease and to evaluate its safety and tolerability. All participants who developed COVID-19 during the study were still eligible for any COVID-19 treatment recommended by their doctor.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 15
Country: Number of subjects enrolled	Brazil: 12
Country: Number of subjects enrolled	Bulgaria: 114
Country: Number of subjects enrolled	Colombia: 322
Country: Number of subjects enrolled	Egypt: 111
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Guatemala: 36
Country: Number of subjects enrolled	Hungary: 19
Country: Number of subjects enrolled	Japan: 42
Country: Number of subjects enrolled	Kenya: 11
Country: Number of subjects enrolled	Mexico: 234
Country: Number of subjects enrolled	Philippines: 33
Country: Number of subjects enrolled	Romania: 66
Country: Number of subjects enrolled	Russian Federation: 279
Country: Number of subjects enrolled	South Africa: 201
Country: Number of subjects enrolled	Thailand: 16

Country: Number of subjects enrolled	Türkiye: 10
Country: Number of subjects enrolled	Ukraine: 262
Country: Number of subjects enrolled	United States: 656
Worldwide total number of subjects	2441
EEA total number of subjects	201

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	37
Adolescents (12-17 years)	39
Adults (18-64 years)	2163
From 65 to 84 years	193
85 years and over	9

## Subject disposition

### Recruitment

Recruitment details:

Only eligible participants without confirmed or suspected coronavirus disease 2019 (COVID-19) were enrolled within a 5-day period of the index case's first positive severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) test result and COVID-19 symptoms onset.

### Pre-assignment

Screening details:

Index cases were enrolled but not randomized to receive study treatment. Besides baseline characteristics and some optional swab collection, no other data was gathered. Survival and mortality data for index cases was not collected per protocol, neither was data collected for protocol specified outcome measures.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

Double-blind

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Molnupiravir
------------------	--------------

Arm description:

Participants were treated with molnupiravir 800 mg every 12 hours (Q12H) on Days 1 to 5.

Arm type	Experimental
Investigational medicinal product name	Molnupiravir
Investigational medicinal product code	
Other name	MK-4482-013
Pharmaceutical forms	Capsule, Capsule
Routes of administration	Oral use, Oral use

Dosage and administration details:

Participants were treated with molnupiravir 800 mg every 12 hours (Q12H) on Days 1 to 5

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Participants were given placebo Q12H on Days 1 to 5.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants were given placebo Q12H on Days 1 to 5.

<b>Arm title</b>	Index Participants
------------------	--------------------

Arm description:

Index case was a participant with documented COVID-19 infection. Index participants were enrolled but did not receive study intervention. Index participants resided in the same household as enrolled participants who received study intervention.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

<b>Number of subjects in period 1</b>	Molnupiravir	Placebo	Index Participants
Started	768	771	902
Treated	763	765	0
Completed	750	751	0
Not completed	18	20	902
Physician decision	1	-	-
Consent withdrawn by subject	10	11	-
Randomized By Mistake Without Study Treatment	1	-	-
Death	-	1	-
Lost to follow-up	-	5	-
Discontinued per protocol	-	-	902
Unkown	6	3	-

## End points

### End points reporting groups

Reporting group title	Molnupiravir
Reporting group description: Participants were treated with molnupiravir 800 mg every 12 hours (Q12H) on Days 1 to 5.	
Reporting group title	Placebo
Reporting group description: Participants were given placebo Q12H on Days 1 to 5.	
Reporting group title	Index Participants
Reporting group description: Index case was a participant with documented COVID-19 infection. Index participants were enrolled but did not receive study intervention. Index participants resided in the same household as enrolled participants who received study intervention.	

### Primary: Percentage of Participants who Had Undetectable SARS-CoV-2 in Baseline Nasopharyngeal (NP) Swabs and Developed COVID-19 (Laboratory-Confirmed SARS-CoV-2 Infection With Symptoms) Through Day 14

End point title	Percentage of Participants who Had Undetectable SARS-CoV-2 in Baseline Nasopharyngeal (NP) Swabs and Developed COVID-19 (Laboratory-Confirmed SARS-CoV-2 Infection With Symptoms) Through Day 14 <sup>[1]</sup>
End point description: Percentage of participants who had undetectable SARS-CoV-2 in baseline NP swabs and developed COVID-19 (laboratory-confirmed SARS-CoV-2 infection with symptoms) through Day 14 were reported. Efficacy analysis was conducted on the mITT (modified intent to treat) population consisting of all randomized participants who received at least 1 dose of study intervention. Index participants were not included in OM analysis per protocol.	
End point type	Primary
End point timeframe: Day 14	
Notes: [1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Statistical analysis was not done for this endpoint	

End point values	Molnupiravir	Placebo		
Subject group type	Reporting group	Reporting group

lower limit	-22.7
upper limit	2

Notes:

[12] - Adjusted differences and the corresponding confidence intervals.

## Adverse events

### Adverse events information<sup>[1]</sup>

Timeframe for reporting adverse events:

Up to Day 29

Adverse event reporting additional description:

All cause mortality (ACM) was analyzed in all randomized participants. Safety Analyses was conducted in all-participants-as-treated (APaT) population, which consisted of all randomized participants who received at least 1 dose of study intervention. Per protocol all-cause mortality and AE information was not collected for index cases.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 September 2021	The key reasons for this amendment were to 1) make the evaluation of laboratory-confirmed COVID-19 through Day 14 in participants with undetectable SARS-CoV-2 in baseline nasopharyngeal (NP) swabs a key secondary endpoint; 2) align the windows (5-days) for COVID-19 symptoms and SARS-CoV-2 testing in the index; and 3) to collect symptom diaries in all participants through Day 29.
28 January 2022	The primary rationale for this amendment was to revise the primary efficacy objective to include only those participants with undetectable SARS-CoV-2 in baseline nasopharyngeal swabs, and to update the interim analysis to include an assessment of early efficacy. These changes required an increase in the sample size (from 1332 to 1500) and an update of the timing of the interim analysis.
09 May 2022	The rationale for this amendment is 1) to add as a secondary objective and associated hypothesis for the prevention of laboratory-confirmed COVID-19 through Day 14 in participants regardless of SARS-CoV-2 results (detectable or undetectable) in baseline NP swabs, and 2) to align male contraception requirements across the study with the requirements in the US EUA Fact Sheet for MOV even if not required locally.
21 June 2022	The rationale for this amendment is 1) to update the interim analysis to remove the assessment of early efficacy; only safety and futility will be assessed at the interim analysis 2) to revise the power calculation and sample size as a result of removing the assessment of early efficacy at the interim analysis and 3) to correct errors mistakenly introduced in the prior amendment in the third secondary objective and second exploratory objective.
16 November 2022	The rationale for this amendment is 1) to update the anti-SARS-CoV-2 neutralizing antibody testing method and 2) to allow use of qualitative OP swab data, under extenuating circumstances where NP swab data are not available, for baseline viral status categorization (ie, to establish whether they are in the primary analysis population, mITT-VN) and for clinical outcome assessment.

Notes:
