Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate whether treatment with eight weekly subcutaneous injections of daratumumab is associated with a reduction of pathogenic serum anti-dsDNA antibodies in patients with moderate to severe SLE.

Primary objective of the LTE observational period is to evaluate of the long-term safety of daratumumab, previously administered in the core study period, for the treatment of SLE;

Protection of trial subjects:

The study was conducted in accordance with the principles of the Declaration of Helsinki.

Subject disposition

Recruitment

Recruitment details:

Ten patients were enrolled between August 2021 and January 2023 at one site in Germany

Pre-assignment

Screening details:

10 Patients with elevated anti -dsDNA antibodies in serum and active Systemic Lupus Erythematosus disease were screened and enrolled.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was a single-arm, open-label, phase 2 clinical trial.

Arms

Arm title	Daratumumab
-----------	-------------

Arm description:

single-arm, open-label,

Arm type	Experimental
Investigational medicinal product name	Daratumumab
Investigational medicinal product code	JNJ-54767414
Other name	Darzalex, EU/3/13/1153
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received eight subcutaneous injections of 1800 mg daratumumab weekly, with dexamethasone as premedication (20mg for first two injections, then 10 mg)

Number of subjects in period 1	Daratumumab
Started	10
Completed	10

End points

End points reporting groups

Reporting group title	Daratumumab
Reporting group description: single-arm, open-label,	

Primary: change anti-dsDNA level

End point title	change anti-dsDNA level ^[1]
End point description:	

End point type	Primary
End point timeframe: from baseline to week 12	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary and secondary outcome measures were analysed according to the intention-to-treat principle. For the primary endpoint analysis, the median is reported for anti-dsDNA antibody titres at baseline and at week 12. The change between the two assessments was analysed using the non-parametric Wilcoxon signed-rank test and the median difference with 95% CI estimate were calculated. For the immunological data, the Chi-Squared test, Kruskal-Wallis test with Dunn's test were computed, (charts)
