

Clinical trial results:

A Phase III, double-blind, randomized, placebo-controlled study to evaluate the safety, reactogenicity and immune response of a single intramuscular dose of unadjuvanted RSV Maternal vaccine, in high risk pregnant women aged 15 to 49 years and infants born to the vaccinated mothers

Summary

EudraCT number	2021-000994-96
Trial protocol	FI ES IT Outside EU/EEA
Global end of trial date	30 May 2023

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002821-PIP01-20
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 October 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 May 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the safety and reactogenicity of a single IM dose of study intervention administered to maternal participants up to 42 days post-delivery.
- To evaluate the pregnancy outcomes and pregnancy-related AESIs up to 42 days post-delivery, in maternal participants who received a single IM dose of study intervention.
- To evaluate safety up to 42 days post-birth in infants born to maternal participants who received a single IM dose of study intervention.
- To evaluate the safety of the vaccine in infants up to 365 days post-birth.
- To evaluate the immunogenicity of a single IM dose of study intervention administered to maternal participants, at delivery.
- To evaluate the transfer of RSV-specific antibodies from maternal participants who received a single IM dose of study intervention to their infants at delivery.
- To evaluate the RSV-specific antibody levels at birth in infants born to maternal participants who received a single IM dose of study intervention.

Protection of trial subjects:

Maternal participants remained under observation for 30 minutes after the administration of the study intervention to ensure that immediate treatment would be provided in the event of a hypersensitivity reaction, or syncope.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 21
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	Finland: 15
Country: Number of subjects enrolled	India: 7
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Panama: 63
Country: Number of subjects enrolled	South Africa: 94
Country: Number of subjects enrolled	Spain: 81
Country: Number of subjects enrolled	United States: 83
Worldwide total number of subjects	384
EEA total number of subjects	101

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	37
Newborns (0-27 days)	161
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	20
Adults (18-64 years)	166
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 384 participants who completed the informed consent process, 169 maternal participants were vaccinated, and 198 infants, including twins, were born to those exposed mothers (RSV_MAT Group-Mother and Control Group-Mother). Therefore, 367 participants were considered exposed.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The study was originally double-blinded, but due to a safety signal, it was fully unblinded to ensure the safety monitoring of the participants.

Arms

Are arms mutually exclusive?	Yes
Arm title	RSV_MAT Group-Mother

Arm description:

Maternal participants randomized to the RSV_MAT Group received a single dose of the RSV MAT vaccine administered, between 24 and 36 weeks of gestation, at Day 1 in this study.

Arm type	Experimental
Investigational medicinal product name	RSV MAT
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose of the RSV MAT vaccine reconstituted with NaCl solution, administered intramuscularly in the non-dominant arm, at Day 1.

Arm title	Control Group-Mother
------------------	----------------------

Arm description:

Maternal participants randomized to the Control Group received a single dose of Placebo administered, between 24 and 36 weeks of gestation, at Day 1 in this study.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose of Placebo, administered intramuscularly in the non-dominant arm, at Day 1.

Arm title	RSV_MAT Group-Infant
------------------	----------------------

Arm description:

This group consisted of infants born to mothers (from RSV_MAT Group-Mother) who received a single dose of RSV MAT vaccine during pregnancy.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Arm title	Control Group-Infant
Arm description: This group consisted of infants born to mothers (from Control Group-Mother) who received a single dose of placebo during pregnancy.	
Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1^[1]	RSV_MAT Group-Mother	Control Group-Mother	RSV_MAT Group-Infant

End points

End points reporting groups

Reporting group title	RSV_MAT Group-Mother
Reporting group description: Maternal participants randomized to the RSV_MAT Group received a single dose of the RSV MAT vaccine administered, between 24 and 36 weeks of gestation, at Day 1 in this study.	
Reporting group title	Control Group-Mother
Reporting group description: Maternal participants randomized to the Control Group received a single dose of Placebo administered, between 24 and 36 weeks of gestation, at Day 1 in this study.	
Reporting group title	RSV_MAT Group-Infant
Reporting group description: This group consisted of infants born to mothers (from RSV_MAT Group-Mother) who received a single dose of RSV MAT vaccine during pregnancy.	
Reporting group title	Control Group-Infant
Reporting group description: This group consisted of infants born to mothers (from Control Group-Mother) who received a single dose of placebo during pregnancy.	
Subject analysis set title	RSV_MAT Group
Subject analysis set type	Per protocol
Subject analysis set description: This group consisted of pairs of maternal participants from RSV_MAT Group - Mother and infant participants from RSV_MAT Group - Infant.	
Subject analysis set title	Control Group
Subject analysis set type	Per protocol
Subject analysis set description: This group consisted of pairs of maternal participants from Control Group - Mother and infant participants from Control Group - Infant.	

Primary: Percentage of maternal participants reporting any solicited administration site events

End point title	Percentage of maternal participants reporting any solicited administration site events ^{[1][2]}
End point description: Assessed solicited administration site events included erythema, pain and swelling. Any pain = occurrence of the symptom regardless of intensity grade. Any erythema and swelling = symptom reported with a surface diameter greater than or equal to 20 millimeters. Analysis was performed on the Solicited Safety Set, which included all maternal participants who received 1 dose of a study intervention and who had solicited safety data available during the specified period.	
End point type	Primary
End point timeframe: From Day 1 to Day 7 included	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the maternal participants.

End point values	RSV_MAT Group-Mother	Control Group- Mother		
Subject group type	Reporting group	Reporting group

Units: Percentage of participants				
number (confidence interval 95%)				
Any Erythema	0.9 (0.0 to 4.8)	0 (0 to 6.6)		
Any Pain	44.2 (34.9 to 53.9)	14.8 (6.6 to 27.1)		
Any Swelling	0 (0 to 3.2)	1.9 (0.0 to 9.9)		

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of maternal participants reporting any solicited systemic events

End point title	Percentage of maternal participants reporting any solicited systemic events ^{[3][4]}
-----------------	---

End point description:

Assessed solicited systemic events included abdominal pain, diarrhea, fatigue, headache, nausea, fever [temperature equal to or above (\geq) 38 degrees Celsius ($^{\circ}$ C)/100.4 degrees Fahrenheit ($^{\circ}$ F), regardless of the location of measurement] and vomiting. Any = occurrence of the adverse event regardless of intensity grade or relation to study vaccination. Analysis was performed on the Solicited Safety Set, which included all maternal participants who received 1 dose of a study intervention and who had solicited safety data available during the specified period.

End point type	Primary
----------------	---------

End point timeframe:

From Day 1 to Day 7 included

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for maternal participants.

End point values	RSV_MAT Group-Mother	Control Group- Mother		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	113	54		
Units: Percentage of participants				
number (confidence interval 95%)				
Any Abdominal pain	20.4 (13.4 to 29.0)	16.7 (7.9 to 29.3)		
Any Diarrhea	20.4 (13.4 to 29.0)	7.4 (2.1 to 17.9)		
Any Fatigue	28.3 (20.2 to 37.6)	27.8 (16.5 to 41.6)		
Any Headache	39.8 (30.7 to 49.5)	38.9 (25.9 to 53.1)		
Any Nausea	24.8 (17.1 to 33.8)	20.4 (10.6 to 33.5)		
Any Fever	0 (0 to 3.2)	0 (0 to 6.6)		

Any Vomiting	8.0 (3.7 to 14.6)	20.4 (10.6 to 33.5)		
--------------	-------------------	---------------------	--	--

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of maternal participants reporting any unsolicited adverse events (AEs)

End point title	Percentage of maternal participants reporting any unsolicited adverse events (AEs) ^{[5][6]}
-----------------	--

End point description:

An unsolicited AE was defined as any AE reported in addition to those solicited during the clinical study. Also, any 'solicited' symptom with onset outside the specified period of follow-up for solicited symptoms was reported as an unsolicited AE. Any = occurrence of any unsolicited AE regardless of intensity grade or relation to vaccination. Analysis was performed on the Exposed Set - Maternal, which included all maternal participants who received 1 dose of a study intervention.

End point type	Primary
----------------	---------

End point timeframe:

From Day 1 to Day 30 included

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the maternal participants.

End point description:

An MAE was defined as an unsolicited AE for which the participants received medical attention such as hospitalization, or an emergency room visit, or visit to/by a health care provider. Analysis was performed on the Exposed Set - Maternal, which included all maternal participants who received 1 dose of a study intervention.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 up to 180 days post-delivery

Notes:

[54] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the maternal participants.

End point values	RSV_MAT Group-Mother	Control Group- Mother		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	113	56		
Units: Percentage of participants				
number (confidence interval 95%)	61.1 (51.4 to 70.1)	60.7 (46.8 to 73.5)		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of maternal participants reporting RSV-associated medically attended respiratory tract illnesses (MA-RTIs) from Day 1 up to 180 days post-delivery

End point title	Number of maternal participants reporting RSV-associated medically attended respiratory tract illnesses (MA-RTIs) from Day 1 up to 180 days post-delivery ^[55]
-----------------	---

End point description:

RSV-associated MA-RTI was defined as a medically attended visit for RTI symptoms and confirmed RSV infection. Analysis was performed on the Exposed Set - Maternal, which included all maternal participants who received 1 dose of a study intervention.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 up to 180 days post-delivery

Notes:

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Maternal groups: Solicited AEs - from Day 1 to Day 7 (included) and Unsolicited AEs - from Day 1 to Day 30 (included) after vaccination. SAEs - from Day 1 up to 180 days post-delivery. Infant groups: SAEs - from birth up to 365 days post-birth.

Adverse event reporting additional description:

Infants born to vaccinated mothers were only monitored for AESIs and MAEs. These results are presented in the outcome measures section. Post-vaccination solicited and unsolicited AEs were not collected for infants, as they were not vaccinated in this study.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 March 2022	Following a recommendation from the Independent Data Monitoring Committee of NCT04605159 (RSV MAT 009), GSK made the decision to stop enrolment and vaccination in the study. Ongoing participants at that time continued to be monitored as part of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
