

## Clinical trial results:

### A Phase 1b, Open-label study to Evaluate the PK, Safety and Efficacy of B/F/TAF in HIV-1 infected, Virologically Suppressed, Pregnant Women in their Second and Third Trimesters

#### Summary

EudraCT number	2021-001073-23
Trial protocol	Outside EU/EEA
Global end of trial date	18 August 2022

#### Results information

Result version number	v2 (current)
This version publication date	29 December 2023
First version publication date	02 March 2023
Version creation reason	<ul style="list-style-type: none"><li>• New data added to full data set</li><li>Added neonates arm group in adverse events section.</li></ul>

#### Trial information

##### Trial identification

Sponsor protocol code	GS-US-380-5310
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03960645
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Gilead Sciences
Sponsor organisation address	333 Lakeside Drive, Foster City, CA, United States, 94404
Public contact	Gilead Clinical Study Information Center, Gilead Sciences, GileadClinicalTrials@gilead.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 August 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 July 2022
Global end of trial reached?	Yes
Global end of trial date	18 August 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the steady state pharmacokinetics (PK) of bicitgravir (BIC) and confirm the dose of BIC/emtricitabine/tenofovir alafenamide (B/F/TAF) 50/200/25 mg fixed dose combination (FDC) in human immunodeficiency virus 1 (HIV-1) infected, virologically suppressed pregnant women in their second and third trimesters.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 June 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Dominican Republic: 6
Country: Number of subjects enrolled	Thailand: 49
Country: Number of subjects enrolled	United States: 7
Worldwide total number of subjects	62
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	29
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	33
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at study sites in the Dominican Republic, Thailand, and the United States.

### Pre-assignment

Screening details:

33 pregnant women were enrolled in the B/F/TAF group. Neonates born to these women were also enrolled in the study for follow up. A total of 29 neonate participants were enrolled.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	B/F/TAF

Arm description:

Pregnant women participants received fixed dose combination (FDC) tablet of bicitgravir/emtricitabine/tenofovir alafenamide (B/F/TAF) 50/200/25 mg, orally, once daily for up to 38 weeks (from the second or third trimesters of pregnancy, depending on enrollment, through 12 weeks post-partum).

Arm type	Experimental
Investigational medicinal product name	B/F/TAF
Investigational medicinal product code	
Other name	GS-9883/F/TAF, Biktarvy®, BVY
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

50/200/25 mg FDC administered as a single dose.

<b>Arm title</b>	Neonates
------------------	----------

Arm description:

Neonates born to women participants in the study were followed from birth up to 8 weeks of age after obtaining consent from the parent or legal guardian. None of the neonates participating in the study were treated with the study drug.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	B/F/TAF	Neonates
Started	33	29
Completed	32	29
Not completed	1	0
Protocol Violation	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	B/F/TAF
Reporting group description:	
Pregnant women participants received fixed dose combination (FDC) tablet of bicitgravir/emtricitabine/tenofovir alafenamide (B/F/TAF) 50/200/25 mg, orally, once daily for up to 38 weeks (from the second or third trimesters of pregnancy, depending on enrollment, through 12 weeks post-partum).	
Reporting group title	Neonates
Reporting group description:	
Neonates born to women participants in the study were followed from birth up to 8 weeks of age after obtaining consent from the parent or legal guardian. None of the neonates participating in the study were treated with the study drug.	

Reporting group values	B/F/TAF	Neonates	Total
Number of subjects	33	29	62
Age categorical Units: Subjects			
Age continuous Units: years			
arithmetic mean	30	0	-
standard deviation	± 5.0	± 0.0	
Gender categorical Units: Subjects			
Female	33	10	43
Male	0	19	19
Race Units: Subjects			
Asian	25	24	49
Black	6	4	10
Other	1	1	2
White	1	0	1
Ethnicity Units: Subjects			
Hispanic or Latino	4	4	8
Not Hispanic or Latino	29	25	54

## End points

### End points reporting groups

Reporting group title	B/F/TAF
Reporting group description: Pregnant women participants received fixed dose combination (FDC) tablet of bicitegravir/emtricitabine/tenofovir alafenamide (B/F/TAF) 50/200/25 mg, orally, once daily for up to 38 weeks (from the second or third trimesters of pregnancy, depending on enrollment, through 12 weeks post-partum).	
Reporting group title	Neonates
Reporting group description: Neonates born to women participants in the study were followed from birth up to 8 weeks of age after obtaining consent from the parent or legal guardian. None of the neonates participating in the study were treated with the study drug.	

### Primary: Pharmacokinetic (PK) Parameter: AUCtau of Bicitegravir (BIC)

End point title	Pharmacokinetic (PK) Parameter: AUCtau of Bicitegravir
End point description: AUCtau is defined as concentration of drug over time (the area under the concentration verses time curve over the dosing interval). PK analysis set included all enrolled adult participants who took at least 1 dose of study drug (B/F/TAF), and had at least 1 non-missing concentration value reported by the PK laboratory for the corresponding analytes (BIC, FTC, TAF, and tenofovir diphosphate [TFV-DP]). Participants in the PK analysis set with available data were analysed.	
End point type	Primary
End point timeframe: Intensive PK: Predose, 0.25, 0.5, 0.75, 1, 1.5, 2, 3, 4, 6, 8, 12, and 24 hours postdose in second trimester (Weeks 20-28), third trimester (Weeks 30-38), Week 6 post-partum, and Week 12 post-partum	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The statistical analysis of this primary endpoint is provided in the attachment.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The neonates did not receive the study drug so they were not analyzed for the primary endpoint.

End point values	B/F/TAF			
Subject group type	Reporting group			
Number of subjects analysed	32			
Units: hours*nanograms per milliliter (h*ng/mL)				
arithmetic mean (standard deviation)				
Second Trimester (n=20)	62772.2 (± 20242.18)			
Third Trimester (n=30)	60163.4 (± 17482.06)			
Week 6 Post-partum (n=31)	134820.3 (± 36217.30)			
Week 12 Post-partum (n=32)	148251.6 (± 42189.17)

## Statistical analyses

No statistical analyses for this end point

## Secondary: PK Parameter: Vz/F of BIC, FTC, and TAF

End point title	PK Parameter: Vz/F of BIC, FTC, and TAF <sup>[11]</sup>
-----------------	---

End point description:

Vz/F is defined as the apparent volume of distribution of the drug. Participants in the PK analysis set with available data were analysed.

End point type	Secondary
----------------	-----------

End point timeframe:

Intensive PK: Predose, 0.25, 0.5, 0.75, 1, 1.5, 2, 3, 4, 6, 8, 12, and 24 hours postdose in second trimester (Weeks 20-28), third trimester (Weeks 30-38), Week 6 post-partum, and Week 12 post-partum

Notes:

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The neonates did not receive the study drug so they were not analyzed for the secondary endpoint.

End point values	B/F/TAF			
Subject group type	Reporting group			
Number of subjects analysed	32			
Units: mL				
arithmetic mean (standard deviation)

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of Participants With HIV-1 RNA < 50 Copies/mL at the Time of Delivery Using the Missing = Excluded Approach in B/F/TAF Group

End point title	Percentage of Participants With HIV-1 RNA < 50 Copies/mL at the Time of Delivery Using the Missing = Excluded Approach in B/F/TAF Group <sup>[13]</sup>
-----------------	---

End point description:

The percentage of participants with HIV-1 RNA < 50 copies/mL at the time of delivery was analysed in B/F/TAF group using missing = excluded approach. In this approach, all missing data were excluded in the computation of the percentages (ie, missing data points were excluded from both the numerator and denominator in the computation). Full analysis set included all adult participants who enrolled into the study and took at least 1 dose of study drug (B/F/TAF). Participants in the full analysis set with available data were analysed.

End point type	Secondary
----------------	-----------

End point timeframe:

At time of delivery

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This secondary endpoint was planned and analyzed only for the B/F/TAF group.

End point values	B/F/TAF			
Subject group type	Reporting group			
Number of subjects analysed	32			
Units: percentage of participants				
number (confidence interval 95%)	100.0 (89.1 to 100.0)			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of Participants With HIV-1 RNA < 50 Copies/mL at Birth Using the Missing = Excluded Approach in Neonates

End point title	Percentage of Participants With HIV-1 RNA < 50 Copies/mL at Birth Using the Missing = Excluded Approach in Neonates <sup>[14]</sup>
-----------------	---

End point description:

The percentage of participants with HIV-1 RNA < 50 copies/mL at the time of birth was analysed in neonates using missing = excluded approach. In this approach, all missing data were excluded in the computation of the percentages (ie, missing data points were excluded from both the numerator and denominator in the computation). Neonate full analysis set included neonates who were born to women participating in the study and had been enrolled into the study as well. Participants in the neonate full analysis set with available data were analysed.

End point type	Secondary
----------------	-----------

End point timeframe:

At birth

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This secondary endpoint was planned and analyzed only for the Neonates group.

End point values	Neonates			
Subject group type	Reporting group			
Number of subjects analysed	2			
Units: percentage of participants				
number (confidence interval 95%)	100.0 (15.8 to 100.0)			

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All-Cause Mortality: From birth up to 8 weeks of age for neonates; From enrollment up to 38 weeks + 30 days for B/F/TAF group.

Adverse Events: First dose date up to 38 weeks + 30 days for B/F/TAF group

Adverse event reporting additional description:

B/F/TAF & Neonates: Safety analysis set. None of neonates participating in study were treated. Adverse events (AE) reported for that group are not treatment emergent (TE). TEAE: any AE with onset on/after start of study drug & no later than 30 days after permanent study drug discontinuation, or any AE leading to premature study drug discontinuation.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	25.1
--------------------	------

### Reporting groups

Reporting group title	B/F/TAF
-----------------------	---------

Reporting group description:

Pregnant women participants received FDC tablet of B/F/TAF 50/200/25 mg, orally, once daily for up to 38 weeks (from the second or third trimesters of pregnancy, depending on enrollment, through 12 weeks post-partum).

Reporting group title	Neonates
-----------------------	----------

Reporting group description:

Neonates born to women participants in the study were followed from birth up to 8 weeks of age after obtaining consent from the parent or legal guardian. None of the neonates participating in the study were treated with the study drug.
