

## Clinical trial results:

### A Phase 2 Open-Label Multicenter Study to Evaluate the Efficacy, Safety, and Pharmacokinetics of Nedosiran in Pediatric Patients from Birth to 11 Years of Age with Primary Hyperoxaluria and Relatively Intact Renal Function

#### Summary

EudraCT number	2021-001083-16
Trial protocol	DE ES PL IT
Global end of trial date	05 February 2025

#### Results information

Result version number	v1 (current)
This version publication date	22 August 2025
First version publication date	22 August 2025

#### Trial information

##### Trial identification

Sponsor protocol code	DCR-PHXC-203
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05001269
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Dicerna Pharmaceuticals, Inc., a Novo Nordisk company
Sponsor organisation address	Novo Nordisk, Novo Allé, Bagsvaerd, Denmark, 2880
Public contact	Clinical Reporting Office (2834), Dicerna Pharmaceuticals, Inc., a Novo Nordisk company, clinicaltrials@novonordisk.com
Scientific contact	Clinical Reporting Office (2834), Dicerna Pharmaceuticals, Inc., a Novo Nordisk company, clinicaltrials@novonordisk.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002493-PIP01-18
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 May 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 February 2025
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Main objective of the study trial is to assess the efficacy of nedosiran in neonates, infants, and children with PH and relatively intact renal function based upon eGFR and serum creatinine

Protection of trial subjects:

This study will be conducted in accordance with the protocol and with the consensus ethical principles derived from international guidelines including the Declaration of Helsinki and CIOMS International Ethical Guidelines (CIOMS VI, 2005); applicable International Conference on Harmonisation (ICH) Good Clinical practices (GCP) guidelines, and applicable laws and regulations, including privacy laws.

With regard to paediatric participants, the ICH Harmonised Tripartite Guideline: Clinical Investigation of Medicinal Products in the Paediatric Population (E11, 20 July 2000) and the European Commission Ethical Considerations for Clinical Trials on Medicinal Products Conducted with Minors (18 September 2017) were considered during the design of the trial, and blood volume minimized where possible.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 February 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Japan: 1
Country: Number of subjects enrolled	Lebanon: 9
Country: Number of subjects enrolled	Türkiye: 3
Country: Number of subjects enrolled	United Arab Emirates: 2
Worldwide total number of subjects	27
EEA total number of subjects	5

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	5
Children (2-11 years)	22
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 13 sites in 9 countries.

### Pre-assignment

Screening details:

This is Phase 2, open-label, single-arm uncontrolled study in paediatric subjects with genetically confirmed primary hyperoxaluria (PH), with relatively intact renal function based upon estimated glomerular filtration rate (eGFR) and serum creatinine. A total of 27 subjects were enrolled in the study and all of them completed the study.

### Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Children 0 to <2 years

Arm description:

All subjects that included neonates (0 to less than [ $<$ ] 2 years) with primary hyperoxaluria (PH) and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 milligrams per kilogram [mg/kg], not to exceed 170 milligrams [mg]), subcutaneously from Day 1 though Month 6.

Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	DCR-PHXC
Other name	
Pharmaceutical forms	Sterile concentrate
Routes of administration	Subcutaneous use

Dosage and administration details:

Subject were administered a sterile formulation of drug substance (nedosiran sodium) in water for injection, intended for subcutaneous administration. Total monthly dose (3.5 mg/kg, not to exceed 170 mg) was calculated based upon body weight on Day 1 of the study that remained constant throughout the study.

<b>Arm title</b>	Children 2 to <6 years
------------------	------------------------

Arm description:

All subjects that included infants (2 to <6 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.

Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	DCR-PHXC
Other name	
Pharmaceutical forms	Sterile concentrate
Routes of administration	Subcutaneous use

Dosage and administration details:

Subject were administered a sterile formulation of drug substance (nedosiran sodium) in water for injection, intended for subcutaneous administration. Total monthly dose (3.5 mg/kg, not to exceed 170 mg) was calculated based upon body weight on Day 1 of the study that remained constant throughout the study.

<b>Arm title</b>	Children 6 to 11 years
------------------	------------------------

---

**Arm description:**

All subjects that included children (6 to 11 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.

Arm type	Experimental
Investigational medicinal product name	Nedosiran
Investigational medicinal product code	DCR-PHXC
Other name	
Pharmaceutical forms	Sterile concentrate
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Subject were administered a sterile formulation of drug substance (nedosiran sodium) in water for injection, intended for subcutaneous administration. Total monthly dose (3.5 mg/kg, not to exceed 170 mg) was calculated based upon body weight on Day 1 of the study that remained constant throughout the study.

<b>Number of subjects in period 1</b>	Children 0 to <2 years	Children 2 to <6 years	Children 6 to 11 years
Started	5	13	9
Modified Intent-To-Treat (MITT)	3 <sup>[1]</sup>	9 <sup>[2]</sup>	8 <sup>[3]</sup>
Safety	5	13	9
Completed	5	13	9

---

**Notes:**

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone reports MITT population with 3 subjects reported under 0 to <2 years age group.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone reports MITT population with 9 subjects reported under 2 to <6 years age group.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone reports MITT population with 3 subjects reported under 6 to 11 years age group.

## Baseline characteristics

### Reporting groups

Reporting group title	Children 0 to <2 years
Reporting group description: All subjects that included neonates (0 to less than [<] 2 years) with primary hyperoxaluria (PH) and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 milligrams per kilogram [mg/kg], not to exceed 170 milligrams [mg]), subcutaneously from Day 1 though Month 6.	
Reporting group title	Children 2 to <6 years
Reporting group description: All subjects that included infants (2 to <6 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.	
Reporting group title	Children 6 to 11 years
Reporting group description: All subjects that included children (6 to 11 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.

## End points

### End points reporting groups

Reporting group title	Children 0 to <2 years
Reporting group description: All subjects that included neonates (0 to less than [ $<$ ] 2 years) with primary hyperoxaluria (PH) and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 milligrams per kilogram [mg/kg], not to exceed 170 milligrams [mg]), subcutaneously from Day 1 though Month 6.	
Reporting group title	Children 2 to <6 years
Reporting group description: All subjects that included infants (2 to <6 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.	
Reporting group title	Children 6 to 11 years
Reporting group description: All subjects that included children (6 to 11 years) with PH and relatively intact renal function based upon eGFR and serum creatinine, received monthly dose of nedosiran (3.5 mg/kg, not to exceed 170 mg), subcutaneously from Day 1 though Month 6.	

### Primary: Percent change from Baseline to Month 6 in spot urinary oxalate-to-creatinine ratio in PH1, PH2, or PH3 subject subgroups

End point title	Percent change from Baseline to Month 6 in spot urinary oxalate-to-creatinine ratio in PH1, PH2, or PH3 subject subgroups <sup>[1]</sup>
End point description: This endpoint reported percent change from baseline to Month 6 in spot urinary oxalate-to-creatinine ratio in paediatric subjects (birth to 11 years of age) with genetically confirmed primary hyperoxaluria type 1 (PH1), primary hyperoxaluria type 2 (PH2), or primary hyperoxaluria type 3 (PH3) subgroups. The MITT Population included all subjects who received at least 1 dose of study intervention and have at least 1 post-baseline spot urinary oxalate to creatinine ratio. Here 'Number of subject analysed' signified 'Overall number of subjects analysed' and 'n' signified 'Number Analysed' that is number of subjects with available data for particular timepoint, for the respective arms; and "99999" signifies that data for these categories were not evaluable as the number of subject for the respective category was 0.	
End point type	Primary
End point timeframe: Baseline (Week 0), Month 6	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical hypotheses confirmatory testing was planned in this study. The endpoint is descriptive in nature.	

End point values	Children 0 to <2 years	Children 2 to <6 years	Children 6 to 11 years

### Secondary: Number of Treatment Emergent Adverse Events and Serious Adverse Events-Nature

End point title	Number of Treatment Emergent Adverse Events and Serious Adverse Events-Nature
-----------------	---

---

**End point description:**

This endpoint reported nature of TEAEs and SAEs. An AE is any untoward medical occurrence in clinical study subject, temporally associated with the use of study drug, whether or not considered related to the study drug. An SAE is any untoward medical occurrence that, at any dose results in death, is life-threatening, requires inpatient hospitalisation or prolongation of existing hospitalisation, results in persistent disability/incapacity, is a congenital anomaly/birth defect, and medical events. An AE is treatment emergent if they have an onset or worsen in severity after a subject receives the study drug. TEAEs are considered as leading to discontinuation if the action taken is marked as "drug withdrawn" on the case report form. TEAEs of special interest include injection site reactions, muscle pain and weakness, and kidney stone events. Safety population included all subjects who received at least 1 dose of study intervention.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline (Week 0) to Month 6

Adverse event reporting additional description:

AE: Any untoward medical occurrence in subject, temporally associated with use of study drug, whether or not considered related to study drug. TEAE: Any AE if they have an onset or worsen in severity after a subject receives the study. Safety population: All subjects who received at least 1 dose of study drug.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 December 2021	<p>Amendment 1, version 2.0: The 15-Apr-2021 (Original Protocol, version 1.0) version of the protocol was amended to expand the population to include 6- to 11-year-old subjects. Other principal changes included changing the primary objective from safety to efficacy, adding pregnancy and contraception requirements, adding a maximum dose of 170 mg, updating the number of planned subjects from 15 to 25, and clarifying that the efficacy endpoints were presented by PH1, PH2, or PH3 subgroups.</p> <p>1) Expanded population to include 6- to 11-year-old subjects. 2) Updated the primary endpoint to efficacy based upon spot urinary oxalate-to-creatinine ratio; safety endpoint was moved to secondary. 3) Added a maximum dose of 170 mg. 4) Clarified for subjects <math>\geq 6</math> months of age at Screening, the dose was to remain constant throughout the study (i.e., the dose administered on Day 1 will be the dose administered at all following visits regardless of any change in body weight). 5) Updated number of planned subjects from 15 to 25. 6) Clarified that the secondary efficacy endpoint related to normalisation of spot urinary oxalate-to-creatinine ratio includes subjects with spot urinary oxalate-to-creatinine ratio <math>\leq</math> the ULN or <math>\leq 1.5 \times</math> ULN at any time point. 7) Clarified that the efficacy endpoints will be presented by PH1, PH2, or PH3 subgroups. 8) Other study related and administrative changes.</p>
01 November 2022	<p>Amendment 2, version 3.0: The 21-Dec-2021 version of the protocol was amended to expand the population to include <math>&lt; 2</math>-year-old subjects.</p> <p>1) Expanded population to include 0- to 2-year-old subjects. 2) Corrected errors in the Schedule of assessment relating to recording of fluid intake. 3) Other administrative updates.</p>
23 February 2023	<p>Amendment 3, version 4.0: 1) Removed the 10 kg minimum body weight from the inclusion criteria. 2) Added text regarding maximum blood volume collection allowed based on body weight and to direct the Investigator to the Laboratory Manual for the blood draw priority list. 3) Updated study duration from 18 to 24 months. 4) Added text to allow for interval weight gain dose adjustments in concomitant therapy regimens. 5) Updated text to clarify the range of 4 to 7 days for reporting of fluid intake. 6) Added additional text denoting differences in response between participants with PH1 and PH2 in study. 7) Added text regarding spot urine collection in infants. 8) Added text to allow for interval weight gain dose adjustments in concomitant therapy regimens. 9) Other administrative updates</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
