

## Clinical trial results:

**A Phase Ib/II open label dose confirmation, proof of concept study of siremadlin in combination with venetoclax plus azacitidine in unfit adult AML participants who responded sub-optimally to first-line venetoclax plus azacitidine treatment and in participants with newly diagnosed unfit AML presenting with high-risk clinical features.**

**Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points and zeros where there is no data to report in this record are not an accurate representation of the clinical trial results.**

**Please use <https://www.novctrd.com> for complete rial results.**

## Summary

EudraCT number	2021-001165-21
Trial protocol	HU IT ES DE
Global end of trial date	17 April 2024

## Results information

Result version number	v1 (current)
This version publication date	01 May 2025
First version publication date	01 May 2025

## Trial information

### Trial identification

Sponsor protocol code	CHDM201I12201
-----------------------	---------------

### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05155709
WHO universal trial number (UTN)	-

Notes:

## Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 April 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	17 April 2024
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To determine the recommended dose of siremadlin in combination with venetoclax plus azacitidine to be explored further in the expansion phase (RDE), separately in Arm 1 and Arm 2.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 May 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Hong Kong: 1
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Israel: 4
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Malaysia: 3
Country: Number of subjects enrolled	Türkiye: 1
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	14
EEA total number of subjects	3

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1
From 65 to 84 years	13
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted in 10 sites in 7 countries. The study aimed to evaluate two sub-populations of adult participants with unfit AML in two separate arms: participants who responded sub-optimally to first-line venetoclax plus azacitidine treatment & participants with newly diagnosed untreated AML presenting with high-risk clinical features.

### Pre-assignment

Screening details:

28 participants were screened in this study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm 1: Adult participants with unfit AML

Arm description:

Adult participants with unfit AML who responded sub-optimally to at least 2 and not more than 4 cycles of first-line venetoclax plus azacitidine therapy. Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m<sup>2</sup>.

Arm type	Experimental
Investigational medicinal product name	Siremadlin
Investigational medicinal product code	HDM201
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Siremadlin (HDM201) was provided orally in the form of 10 mg, 20 mg and 30 mg (might have been included as an additional strength) capsules. Subjects were dosed at 20 mg.

Investigational medicinal product name	Azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection, Powder for solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Azacitidine was provided in 100 mg (formulation provided as approved by regulations) was provided as powder for suspension for injection, or powder for solution for subcutaneous injection or intravenous infusion.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Venetoclax was provided in the form of 10 mg, 50 mg and 100 mg tablets. Subjects were dosed at 400 mg dose per day.

<b>Arm title</b>	Arm2:Adult parts wth newly diag unfit AML/high-risk clin feats
------------------	--

Arm description:

Adult participants with unfit AML who were newly diagnosed and presenting with high-risk clinical features (which related to factors conferring to a low likelihood of response to venetoclax plus azacitidine) and with adverse genetic risk stratification (according to ELN 2022) (Except TP53 mutation positive participants). Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m<sup>2</sup>.

Arm type	Experimental
Investigational medicinal product name	Siremadlin
Investigational medicinal product code	HDM201
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Siremadlin (HDM201) was provided orally in the form of 10 mg, 20 mg and 30 mg (might have been included as an additional strength) capsules. Subjects were dosed at 20 mg.

Investigational medicinal product name	Azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection, Powder for solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Azacitidine was provided in 100 mg (formulation provided as approved by regulations) was provided as powder for suspension for injection, or powder for solution for subcutaneous injection or intravenous infusion.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Venetoclax was provided in the form of 10 mg, 50 mg and 100 mg tablets. Subjects were dosed at 400 mg dose per day.

Number of subjects in period 1	Arm 1: Adult participants with unfit AML	Arm2:Adult parts wth newly diag unfit AML/high-risk clin feats
Started	6	8
Did not enter post-treatment follow-up	4	6
Entered post-treatment f/u, discontin.	2	1
Safety Set	6	8
Full Analysis Set (FAS)	6	7
Excluded from FAS due to TP53	0	1
Completed	0	0
Not completed	6	8
Adverse event, serious fatal	3	7
Subject Decision	1	-

Excluded from FAS due to TP53 & died	-	1
Study Terminated by Sponsor	2	-

## Baseline characteristics

### Reporting groups

Reporting group title	Arm 1: Adult participants with unfit AML
-----------------------	--

Reporting group description:

Adult participants with unfit AML who responded sub-optimally to at least 2 and not more than 4 cycles of first-line venetoclax plus azacitidine therapy. Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m<sup>2</sup>.

Reporting group title	Arm2:Adult parts wth newly diag unfit AML/high-risk clin feats
-----------------------	--

Reporting group description:

Adult participants with unfit AML who were newly diagnosed and presenting with high-risk clinical features (which related to factors conferring to a low likelihood of response to venetoclax plus azacitidine) and with adverse genetic risk stratification (according to ELN 2022) (Except TP53 mutation positive participants). Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m<sup>2</sup>.

Reporting group values	Arm 1: Adult participants with unfit AML	Arm2:Adult parts wth newly diag unfit AML/high-risk clin feats	Total
Number of subjects	6	8	14
Age Categorical Units: Participants			
< 65 years	1	0	1

## End points

### End points reporting groups

Reporting group title	Arm 1: Adult participants with unfit AML
Reporting group description: Adult participants with unfit AML who responded sub-optimally to at least 2 and not more than 4 cycles of first-line venetoclax plus azacitidine therapy. Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m <sup>2</sup> .	
Reporting group title	Arm2:Adult parts with newly diag unfit AML/high-risk clin feats
Reporting group description: Adult participants with unfit AML who were newly diagnosed and presenting with high-risk clinical features (which related to factors conferring to a low likelihood of response to venetoclax plus azacitidine) and with adverse genetic risk stratification (according to ELN 2022) (Except TP53 mutation positive participants). Siremadlin was administered at a dose of 20 mg QD which could be increased based on toxicities; venetoclax was administered at 400 mg once daily and azacitidine was administered at 75 mg/m <sup>2</sup> .	

### Primary: Percentage of participants with Dose Limiting Toxicities (DLTs) as per investigator assessment reported during the first cycle (Part 1: Safety run-in part)

End point title	Percentage of participants with Dose Limiting Toxicities (DLTs) as per investigator assessment reported during the first cycle (Part 1: Safety run-in part) <sup>[1]</sup>
End point description: A dose-limiting toxicity (DLT) is defined as an adverse event (AE) or abnormal laboratory value considered by the Investigator to be at least possibly related to siremadlin as a single contributor or in combination with other component(s) of study treatment that occurs beginning the first day of siremadlin dosing in the study until end of cycle 1.	
End point type	Primary
End point timeframe: From Cycle 1 Day 1 to Cycle 1 Day 28; Cycle = 28 days	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No Statistical analysis was done.

End point values	Arm 1: Adult participants with unfit AML	Arm2:Adult parts with newly diag unfit AML/high-risk clin feats		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	3	7		
Units: Percentage of Participants				
number (not applicable)	0.0	14.29		

### Statistical analyses

No statistical analyses for this end point

### Primary: Percentage of participants achieving a complete remission (CR) rate as per

**investigator assessment (Arm 1 only: Safety run-in part)**

End point title	Percentage of participants achieving a complete remission (CR) rate as per investigator assessment (Arm 1 only: Safety run-in part) <sup>[2][3]</sup>
-----------------	---

## End point description:

Assessed by CR rate. CR rate is defined as the percentage of participants with best overall response of complete remission (CR) as per investigator assessment using the international guidelines for assessment of response in AML (IWG ELN criteria 2027 and 2022).

End point type	Primary
----------------	---------

## End point timeframe:

Day 14, Day 28, Day 56 and then every 84 days; end of treatment; estimated median time on follow-up was 57 days

## Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No Statistical analysis was done.

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No Statistical analysis was done.

<b>End point values</b>	Arm 1: Adult participants with unfit AML			
Subject group type	Reporting group

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) were collected from first dosing (Day 1) until 30 days after the date of last actual administration of study treatment, maximum treatment duration: approx. 9.3 months for Arm 1 and approx. 7.4 months for Arm 2.

Adverse event reporting additional description:

An Adverse Event (AE) is any untoward medical occurrence in a clinical investigation participant after providing written informed consent for participation in the study. Therefore, an AE may or may not be temporally or causally associated with the use of a medicinal (investigational) product.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 October 2021	<p>In response to the request from Health Authorities, the inclusion criteria were revised. The amendment included:</p> <p>Clarification on inclusion criterion 4 regarding ineligibility of participants for standard induction chemotherapy, to be determined for both arms' participant population prior to initiation of standard of care venetoclax plus azacitidine treatment; particularly for Arm 1 participants, who received first line venetoclax plus azacitidine treatment prior to study entry.</p> <p>Inclusion criterion 9 was amended to specify that participants with an estimated glomerular filtration rate (eGFR) <math>\geq 60</math> mL/min/1.73 m<sup>2</sup>, were eligible for the study.</p> <p>Amendment also specified that siremadlin would be discontinued in case of Grade 4 hyperbilirubinemia in the guidance for dose modification. Clarification regarding Tumor Lysis Syndrome (TLS) prophylactic treatments options were added.</p> <p>Additional, ECHO (or MUGA scan) was added at screening visit (and during treatment, if clinically indicated) for the evaluation of cardiac function.</p>
03 August 2022	<p>Protocol was amended to update the dose modifications guidelines of the study treatment based on participant's efficacy response and associated hematological toxicities.</p> <p>The amendment adopted 2022 European Leukemia Net (ELN) 2022 genetic risk classification and AML response criteria (Döhner et al 2022).</p> <p>Dose modification guidelines for hepatic adverse reaction were updated, and the follow-up for participants with QTcF prolongations was clarified.</p>
28 April 2023	<p>The protocol was amended on February 24, 2023, to implement Urgent Safety Measures addressing severe neutropenia and thrombocytopenia. Changes included dose modification and early treatment interruption starting from Cycle 1, along with a mandatory bone marrow assessment at C1D14 for all participants.</p> <p>Guidance was provided on prophylactic anti-infective therapy and G-CSF use.</p> <p>Venetoclax dose modification was updated, considering a minimum exposure criterion at Cycle 1 for the Dose Determining Set, with the planned dose reduced from 75% to 50%. Clarifications were made regarding the prior use of Hypomethylating agents (HMA) for treating primary MDS, excluding participants with an antecedent diagnosis of myelofibrosis during the safety-run and enrolling them only in the expansion part of the study. Participants previously treated with FLT-3 inhibitors and checkpoint inhibitors were excluded. Flexibility for PK sample collection was adjusted to +/- 2 hours for the 12-hour and 24-hour post-dose timepoints in the safety run-in phase. Emphasis was placed on caution or action against the use of strong or moderate CYP3A inhibitors or P-gp inhibitors. The azacitidine SmPC was updated to extend the mandatory contraception period for female participants from 3 to 6 months. Clear guidance was provided on overdose management and dose modification for isolated Grade 2 bilirubin increases.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
