

## Clinical trial results:

**Single (open-label) and repeat dose (randomized, placebo-controlled) trial to assess the safety, tolerability and pharmacokinetics of GB1211 (Gal-3 inhibitor) in participants with hepatic impairment (Child-Pugh B and Child-Pugh C).**

### Summary

EudraCT number	2021-001235-12
Trial protocol	BG
Global end of trial date	04 July 2022

### Results information

Result version number	v1 (current)
This version publication date	21 September 2023
First version publication date	21 September 2023

### Trial information

#### Trial identification

Sponsor protocol code	GULLIVER-2
-----------------------	------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05009680
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Galecto Biotech AB
Sponsor organisation address	Cobis Science Park Ole Maaloes Vej 3, Copenhagen, Denmark, DK-2200
Public contact	Chief Medical Officer , Galecto Biotech AB, Clinicaltrials@galecto.com
Scientific contact	Chief Medical Officer , Galecto Biotech AB, Clinicaltrials@galecto.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 June 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 July 2022
Global end of trial reached?	Yes
Global end of trial date	04 July 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Primary objective (Part 1, 2 and 3):

To assess the effect of hepatic impairment on the safety, tolerability and pharmacokinetics of GB1211 in participants with moderate or severe hepatic impairment.

Secondary objectives (Part 2):

To assess the effect of GB1211 on hepatic function in participants with moderate hepatic impairment.

Protection of trial subjects:

This study was conducted in accordance with the International Council on Harmonisation (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 54
Worldwide total number of subjects	54
EEA total number of subjects	54

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	46

From 65 to 84 years	8
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Male or female subjects between 18 and 75 years with moderate hepatic impairment as defined by Child-Pugh B score, with severe hepatic impairment as defined by the Child-Pugh C score and healthy participants (controls).

### Pre-assignment

Screening details:

Demographics; Medical and surgical history; Inclusion and exclusion criteria; Physical examination; Recording body weight and height; Vital signs; 12-lead ECG; Safety laboratory; Serum pregnancy test; Alcohol breath test; Urine drug screen; Prior and Concomitant medication; AEs; SARS-CoV-2 antigen; Serology; (LiMAX test and FibroScan in Part 2).

### Period 1

Period 1 title	Baseline Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)

Arm description:

Subjects with moderate hepatic impairment (Child-Pugh B) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.

Arm type	Experimental
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Arm title</b>	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)
------------------	--

Arm description:

Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.

Arm type	Matching control
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Arm title</b>	Part 2 GB1211 100 mg (2 x 50 mg)
------------------	----------------------------------

Arm description:

Subjects with moderate hepatic impairment (Child-Pugh B) received GB1211, 100 mg (2 x 50 mg capsules of GB1211), twice daily for 12 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Orally administered 100 mg GB1211 (2 x 50 mg, capsule), twice daily.	
<b>Arm title</b>	Part 2 Placebo (2 x 0 mg)
Arm description:	
Subjects with moderate hepatic impairment (Child-Pugh B) received Placebo (2 x 0 mg, capsule), twice daily for 12 weeks.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	P
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Orally administered Placebo (2 x 0 mg, capsule), twice daily.	
<b>Arm title</b>	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)
Arm description:	
Subjects with severe hepatic impairment (Child-Pugh C) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.	
Arm type	Experimental
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.	
<b>Arm title</b>	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
Arm description:	
Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.	
Arm type	Matching control
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.	

Number of subjects in period 1	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)	Part 2 GB1211 100 mg (2 x 50 mg)
Started	6	6	15
Completed	6	6	13
Not completed	0	0	2
Adverse event, serious fatal	-	-	1
Withdrawal of informed consent	-	-	1

Number of subjects in period 1	Part 2 Placebo (2 x 0 mg)	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
Started	15	6	6
Completed	15	6	6
Not completed	0	0	0
Adverse event, serious fatal	-	-	-
Withdrawal of informed consent	-	-	-

## Period 2

Period 2 title	PART 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Part 2 of this study was a double-blinded trial. During the clinical phase of the trial, neither the subjects nor the site personnel involved in the study assessments were aware of the identity of the treatments administered (GB1211 or Placebo). Blinding was ensured by the Interactive Web-based Response System (IWRS) and was to be broken by a PI only for specific subjects where there was a reason to do.

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 2 GB1211 100 mg (2 x 50 mg)

Arm description:

Subjects with moderate hepatic impairment (Child-Pugh B) received GB1211, 100 mg (2 x 50 mg capsules of GB1211), twice daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), twice daily.

<b>Arm title</b>	Part 2 Placebo (2 x 0 mg)
------------------	---------------------------

Arm description:

Subjects with moderate hepatic impairment (Child-Pugh B) received Placebo (2 x 0 mg, capsule), twice daily for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	P
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered Placebo (2 x 0 mg, capsule), twice daily.

<b>Number of subjects in period 2<sup>[1]</sup></b>	Part 2 GB1211 100 mg (2 x 50 mg)	Part 2 Placebo (2 x 0 mg)
Started	15	15
Completed	13	15
Not completed	2	0
Adverse event, serious fatal	1	-
Withdrawal of informed consent	1	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Period 1 and period 2 had different enrolled population.

### Period 3

Period 3 title	PART 1
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)

Arm description:

Subjects with moderate hepatic impairment (Child-Pugh B) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.

Arm type	Experimental
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Arm title</b>	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)
------------------	--

Arm description:

Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.

Arm type	Matching control
----------	------------------

Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Number of subjects in period 3<sup>[2]</sup></b>	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)
Started	6	6
Completed	6	6

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Period 2 and period 3 had different enrolled population.

#### Period 4

Period 4 title	PART 3
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

#### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)

Arm description:

Subjects with severe hepatic impairment (Child-Pugh C) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.

Arm type	Experimental
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Arm title</b>	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
------------------	--

Arm description:

Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.

Arm type	Matching control
Investigational medicinal product name	Test product
Investigational medicinal product code	T
Other name	GB1211
Pharmaceutical forms	Capsule
Routes of administration	Oral use

---

Dosage and administration details:

Orally administered 100 mg GB1211 (2 x 50 mg, capsule), single dose.

<b>Number of subjects in period 4</b>	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
Started	6	6
Completed	6	6

## End points

### End points reporting groups

Reporting group title	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.	
Reporting group title	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)
Reporting group description: Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.	
Reporting group title	Part 2 GB1211 100 mg (2 x 50 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received GB1211, 100 mg (2 x 50 mg capsules of GB1211), twice daily for 12 weeks.	
Reporting group title	Part 2 Placebo (2 x 0 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received Placebo (2 x 0 mg, capsule), twice daily for 12 weeks.	
Reporting group title	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)
Reporting group description: Subjects with severe hepatic impairment (Child-Pugh C) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.	
Reporting group title	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
Reporting group description: Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.	
Reporting group title	Part 2 GB1211 100 mg (2 x 50 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received GB1211, 100 mg (2 x 50 mg capsules of GB1211), twice daily for 12 weeks.	
Reporting group title	Part 2 Placebo (2 x 0 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received Placebo (2 x 0 mg, capsule), twice daily for 12 weeks.	
Reporting group title	Part 1 Child-Pugh B Participants 100 mg GB1211 (2 x 50 mg)
Reporting group description: Subjects with moderate hepatic impairment (Child-Pugh B) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.	
Reporting group title	Part 1 Healthy Control 100 mg GB1211 (2 x 50 mg)
Reporting group description: Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.	
Reporting group title	Part 3 Child-Pugh C Participants 100 mg GB1211 (2 x 50 mg)
Reporting group description: Subjects with severe hepatic impairment (Child-Pugh C) received single oral dose of 100 mg GB1211 (2 x 50 mg capsule) on Day 1.	
Reporting group title	Part 3 Healthy Control 100 mg GB1211 (2 x 50 mg)
Reporting group description: Healthy Subjects received single oral dose of 100 mg GB1211 (2 x 50 mg) on Day 1.	
Subject analysis set title	Safety Population
Subject analysis set type	Safety analysis
Subject analysis set description: The safety population included all participants who received at least 1 dose of study treatment (GB1211 or placebo). The safety population was used for summaries of safety and other (such as disposition, concomitant medications, etc.) variables and for all safety analyses. The participants in the safety	

population were analyzed according to the treatment they have received.

Subject analysis set title	PK Population
Subject analysis set type	Per protocol

Subject analysis set description:

The PK population in Part 2 included all participants who received GB1211 and had enough quantifiable PK samples to estimate the PK profiles on at least one out of Days 1 and 21 and who had no important protocol deviations affecting the PK parameters. The PK population was used for the descriptive summaries and statistical analyses of the PK concentrations and parameters.

Subject analysis set title	mITT Population
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The mITT population included all participants who were randomized and received study treatment (GB1211 or placebo) for the 12-week planned dosing period. The participants in the mITT population were analyzed according to the treatment to which they were randomized. Note: this population was defined post hoc.

Subject analysis set title	Per Protocol (PP) Population
Subject analysis set type	Per protocol

Subject analysis set description:

The PP population included all participants who were randomized, received at least 1 dose of study treatment (GB1211 or placebo) and who had no important protocol deviations. Each participant in the PP population was analyzed according to the treatment they had received.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Screening until End of Study Visit

Adverse event reporting additional description:

The safety of the test product was assessed on the basis of clinical and laboratory examinations, local and general tolerability (vital signs, electrocardiogram (ECG), physical examination) and recording of all AEs and/or TEAEs.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 November 2021	Main Exclusion Criteria: Have previously completed or withdrawn from a study investigating GB1211 and have previously received the investigational product was applicable for Parts 1 and 3 only, not for Part 2. On Day 1 the time of twelve-lead ECG measurement was changed from 4h ( $\pm$ 15 min) pre-dose to 4h ( $\pm$ 15 min) post-dose. The pregnancy test at the Screening Visit for all parts was amended. Urine pregnancy test was not performed, a serum pregnancy was completed. On day 21 and Day 63 ( $\pm$ 2 days): Clinical Laboratory testing Blood chemistry and hematology at pre-dose were not performed and the time of twelve-lead ECG measurement was changed from 4h ( $\pm$ 15 min) pre-dose to 4h ( $\pm$ 15 min) post-dose. In Section 13.1 Appendix 1, the Assigning a Child-Pugh score table was updated.
20 May 2022	The change was to indicate the samples for investigating the potential metabolites of GB1211. They were investigated using surplus plasma from GB1211 PK blood samples for all parts of the study.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The objective was to assess GB1211 in subjects with hepatic impairment. Three months of exposure was sufficient to examine the safety, tolerability and PK parameters, but may not be sufficient for the clinical endpoints in the secondary objectives.

Notes:
