Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 March 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 March 2023
Global end of trial reached?	Yes
Global end of trial date	01 March 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to compare progression-free survival (PFS) between the milademetan treatment arm and trabectedin control arm, as determined by blinded independent central review (BICR), in patients with unresectable or metastatic dedifferentiated (DD) liposarcoma, with or without a well-differentiated (WD) component, who progressed on 1 or more prior systemic therapies including at least 1 anthracycline-based therapy.

Protection of trial subjects:

This study was to be conducted according to the protocol and in compliance with Good Clinical Practice (GCP), with the Declaration of Helsinki and with other applicable regulatory requirements. Before the start of the study, the study protocol and/or other relevant documents were approved by the IECs/IRBs/Competent Authorities, in accordance with local legal requirements. Before each patient was admitted to the study, written informed consent was obtained from the patient according to the regulatory and legal requirements of the participating country. The consent form was signed, dated, and retained by the Investigator or designee (as listed on the Delegation of Authority Log) as part of the study records.

An Independent Data Monitoring Committee (IDMC) reviewed unblinded safety data during the course of the study and made recommendations to the Sponsor as applicable and outlined in the IDMC charter.

Background therapy: -

Evidence for comparator:

Trabectedin was the chosen active control treatment because it has been approved as a second-line therapy by the FDA for patients with liposarcoma (LPS) or leiomyosarcoma who received a prior anthracycline-containing regimen. Trabectedin was approved for LPS based on improved PFS. In this study, the primary endpoint was to compare PFS, as determined by BICR, between patients receiving milademetan versus trabectedin.

Actual start date of recruitment	07 July 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Georgia: 7
Country: Number of subjects enrolled	Hong Kong: 4
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Taiwan: 8
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	United States: 61
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Spain: 19

Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	France: 20
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Italy: 20
Worldwide total number of subjects	175
EEA total number of subjects	73

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	98
From 65 to 84 years	77
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 200 patients were screened and 175 were randomized across 58 study sites in Austria, Belgium, Canada, France, Georgia, Germany, Hong Kong, Italy, Poland, South Korea, Spain, Taiwan, UK and the US. First patient signed informed consent form: 07 July 2021. First patient randomized/enrolled: 13 July 2021.

Pre-assignment

Screening details:

Male and female patients at least 18 years of age with histologically confirmed DDLPS, with or without a well-differentiated (WD) component, by local pathologic review. They must have received 1 or more systemic cancer therapy regimens, including at least 1 anthracycline-based regimen, and had radiographic progressive disease (per RECIST v1.1).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Milademetan

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Milademetan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Administered 260 mg QD orally on Days 1 to 3 and Days 15 to 17 of each 28-day cycle

Arm title	Trabectedin
------------------	-------------

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Trabectedin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered at 1.5 mg/m² BSA as a 24-hour IV infusion, every 3 weeks (ie, 21-day cycles) through a central venous line

Number of subjects in period 1	Milademetan	Trabectedin
Started	86	89
Completed	0	0
Not completed	86	89
Adverse event, serious fatal	43	30
Consent withdrawn by subject	8	13
Physician decision	1	1
1 d/c study w/reason "progression disease"	-	1
Lost to follow-up	-	2
Ongoing on study when study stopped	34	42

Primary: Progression Free Survival (PFS) as determined by BICR

End point title	Progression Free Survival (PFS) as determined by BICR
End point description: The primary efficacy endpoint was to demonstrate whether there was an increase in PFS in patients treated with milademetan versus trabectedin in the ITT population. Tumor response was to be assessed in accordance with RECIST version 1.1 by BICR. The study did not meet its primary endpoint, PFS by BICR.	
End point type	Primary
End point timeframe: PFS=the time from randomization to the earliest date of the first objective documentation of radiographic disease progression or death due to any cause. When 105 BICR assessed PFS events had occurred, the primary PFS analysis was to be performed.	

End point values	Milademetan	Trabectedin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	86 ^[1]	89 ^[2]		
Units: month				
median (confidence interval 95%)	3.6 (2.1 to 4.1)	2.2 (1.9 to 4.2)		

Notes:

- [1] - a. Pts with PFS events: 61
b. Pts censored: 25
c. Kaplan-Meier estimate of PFS rate 6 month: 25.7%
- [2] - a. Pts with PFS events: 54
b. Pts censored: 35
c. Kaplan-Meier estimate of PFS rate 6 month: 26.5%

Statistical analyses

Statistical analysis title	Statistical analysis for PFS
Statistical analysis description: 2-sided, log-rank test was used to compare milademetan vs trabectedin at a significance value of 0.05. PFS was summarized using Kaplan-Meier. Median event times & corresponding 2-sided 95% CIs were provided. A log-rank test stratified by ECOG (0 versus 1) & number of prior lines of therapy (≤ 2 vs > 2) were used to test the null hypothesis of no difference in the PFS between the 2 treatment groups at a significance level of 0.05.	
Comparison groups	Milademetan v Trabectedin

Number of subjects included in analysis	175
Analysis specification	Pre-specified
Analysis type	other ^[3]
P-value	= 0.53 ^[4]
Method	Logrank
Parameter estimate	Cox proportional hazard
Point estimate	0.89
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.61
upper limit	1.29

Notes:

[3] - The p-value from the stratified log-rank test was 0.53, which indicates there was no statistical difference in BICR PFS between 2 treatment arms.

A stratified Cox proportional hazard model was used to estimate the hazard ratio. Unstratified analysis was also provided as a sensitivity analysis.

[4] - Stratified log-rank test, p-value = 0.53

Stratified Cox proportional hazards model p-value = 0.533

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

To compare the milademetan treatment arm versus the trabectedin control arm for the OS. In the ITT Population, survival data was to be collected throughout the study treatment phase and long-term follow-up. Survival follow-up after patient discontinuation of investigational product was to be conducted approximately every 12 weeks to assess for survival until subject's loss to follow-up or death, or for 24 months following the final dose of study drug, whichever came first.

The study was not powered to address OS as of the cutoff date and the results presented in this report should be understood in this context. There were no statistically significant differences between the study arms in OS. OS was to be followed after the primary PFS analysis, and the final analysis of OS was to be performed 24 months after the last dose; however, the study was prematurely discontinued.

End point type	Secondary
----------------	-----------

End point timeframe:

OS measured from randomized date to death date by any cause, censored at last date known alive on or prior to the data cutoff date.

End point values	Milademetan	Trabectedin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	86 ^[5]	89 ^[6]		
Units: month				
median (confidence interval 95%)	9.5 (6.5 to 12.8)	10.2 (8.6 to 99999)		

Notes:

[5] - a. Pts. with death: 44 b. Reason censored: i. ended study not due to death=13 ii. data cut-off=29

[6] - 1.Pt w/death: 31; 2.Reason censored: a.ended study not due to death=21 b.data cut-off=37; "99999"=NE

Statistical analyses

Statistical analysis title	Statistical analysis for OS
----------------------------	-----------------------------

Statistical analysis description:

OS was summarized using the Kaplan-Meier method and displayed graphically when appropriate. Median event times and the corresponding 2-sided 95% CIs were provided. The OS rate (proportion of patients

surviving) at various time points (e.g., 3, 6, and 12 months) was calculated using Kaplan-Meier methods.

Comparison groups	Trabectedin v Milademetan
Number of subjects included in analysis	175
Analysis specification	Post-hoc
Analysis type	other ^[7]
P-value	= 0.308 ^[8]
Method	Logrank
Parameter estimate	Cox proportional hazard
Point estimate	1.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.8
upper limit	2.04

Notes:

[7] - The Kaplan-Meier estimate of OS rate at 6 months was 64.7% (95% CI: 53.3, 73.9) for the Milademetan Arm, and was 71.1% (95% CI: 59.4, 80.0) for the Trabectedin Arm. The OS results using the unstratified Kaplan-Meier and Cox models, the CCDD Population, or the Per Protocol Population reflect those results found in the ITT Population.

[8] - Stratified log-rank test, p-value = 0.308
Stratified Cox proportional hazards model p-value = 0.310

Secondary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR)
End point description:	To compare the milademetan treatment arm versus the trabectedin control arm for the DCR (ITT Population) by BICR and Investigator assessment. The DCR for each treatment group was estimated by dividing the number of patients with CR, PR, or SD for at least 16 weeks by the number of patients enrolled in the respective treatment group. Similar analysis as for ORR was to be performed for DCR. There were no statistically significant differences between the study arms in Investigator-assessed DCR.
End point type	Secondary
End point timeframe:	The DCR was to be measured as the percentage of patients who have achieved CR, PR, or SD for at least 16 weeks according to RECIST version 1.1 recorded in the period between first study drug dose and disease progression or death to any cause.

End point values	Milademetan	Trabectedin

upper limit	1.15

Notes:

[19] - Interpretation of the PFS by Investigator results was unchanged using the unstratified Kaplan-Meier and Cox models, all observed events, the CCDD Population, or the Per Protocol Population and reflect those found in the ITT Population.

[20] - Stratified Log-rank Test, p-value = 0.219

Stratified Cox Proportional Hazards Model p-value = 0.224

Adverse events

Adverse events information

Timeframe for reporting adverse events:

After signing informed consent but before initiation of study drug, an event was to be entered on the AE CRF if related to protocol-required procedures. After 1st study drug dose, all AEs were to be entered on AE CRF until 30 days after last study drug dose

Adverse event reporting additional description:

All AEs were to be followed until resolution or until stable, if possible. The Sponsor may have requested certain AEs be followed beyond the protocol-defined f/u period. Investigator must have reported all SAEs regardless of causality within 24hrs of learning of event. Incidence of SAEs occurring in >1 Patient reported in SAE table. Safety Population

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 May 2021	<ul style="list-style-type: none">• Made the following updates to the patient selection criteria:<ul style="list-style-type: none">o Required documentation of advanced unresectable and/or metastatic diseaseo Added requirements for anticoagulation medication and antihypertensive medicationo Revised the systolic and diastolic parameters• Added criteria for treatment beyond progression
20 May 2021	<ul style="list-style-type: none">• Updated milademetan dose modification guidelines to recommend discontinuation for Grade 3 and 4 AEs that do not resolve to Grade 1 within 4 weeks; resumption after Grade 4 nonhematologic AEs must be discussed with the Medical Monitor; required discontinuation for a recurrent Grade 4 event.
18 March 2022	<ul style="list-style-type: none">• Changed the definition of DCR from patients who achieve complete response, partial response, or stable disease for at least 8 weeks to patients who achieve this for at least 16 weeks• Changed the definition of TEAEs to account for the possibility of new anticancer therapy starting before 30 days after a patient's last dose of study drug

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
