

Clinical trial results:

A Phase 2 Randomized, Double-Blind, Placebo-Controlled, Dose-Finding Study to Investigate Safety, Tolerability, Pharmacokinetics, and Efficacy of NBI-921352 as Adjunctive Therapy in Adult Subjects with Focal Onset Seizures (FOS)

Summary

EudraCT number	2021-001433-39
Trial protocol	CZ HU FR IT BE ES
Global end of trial date	21 August 2023

Results information

Result version number	v1 (current)
This version publication date	06 September 2024
First version publication date	06 September 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 March 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 August 2023
Global end of trial reached?	Yes
Global end of trial date	21 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to assess the safety and tolerability and to characterize the pharmacokinetic (PK) and PK/pharmacodynamic (PD) relationship of NBI-921352 in adults with FOS taking concomitant background antiseizure medications (ASMs).

Protection of trial subjects:

This study was performed in full compliance with applicable Good Clinical Practice (GCP) and regulations, including the archiving of essential documents.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 30
Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Czechia: 36
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Australia: 10
Worldwide total number of subjects	101
EEA total number of subjects	91

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	101
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were randomized 1:1:1:1 to placebo, NBI-921352 low, medium, or high dose groups to achieve target doses during maintenance period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received matching placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to NBI-921352 was administered.

Arm title	NBI-921352 Low Dose
------------------	---------------------

Arm description:

Participants received NBI-921352 low dose.

Arm type	Experimental
Investigational medicinal product name	NBI-921352
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

NBI-921352 was administered.

Arm title	NBI-921352 Medium Dose
------------------	------------------------

Arm description:

Participants received NBI-921352 medium dose.

Arm type	Experimental
Investigational medicinal product name	NBI-921352
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
NBI-921352 was administered.

Arm title	NBI-921352 High Dose
Arm description: Participants received NBI-921352 high dose.	
Arm type	Experimental
Investigational medicinal product name	NBI-921352
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
NBI-921352 was administered.

Number of subjects in period 1	Placebo	NBI-921352 Low Dose	NBI-921352 Medium Dose

Subject analysis set description: Participants received NBI-921352.	

Primary: Number of Participants With Serious Treatment-emergent Adverse Events (TEAEs), TEAEs Leading to Discontinuation of Study Treatment, and Fatal TEAEs

End point title	Number of Participants With Serious Treatment-emergent Adverse Events (TEAEs), TEAEs Leading to Discontinuation of Study Treatment, and Fatal TEAEs ^[1]
End point description: A TEAE was an adverse event (AE) with an onset date on or after first dose of study drug and within 14 days after the last dose of study drug. An AE was any untoward medical occurrence in a participant administered the study drug that did not necessarily have a causal relationship with the treatment. A serious adverse event (SAE) was any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required in-patient hospitalization/prolongation of existing hospitalization, was a congenital anomaly, was infection that required treatment parenteral antibiotics, other important medical events which might jeopardize participants, or might require medical/surgical intervention to prevent any of the above. A summary of all Serious Adverse Events and Other Adverse Events (nonserious) regardless of causality is located in the 'Reported Adverse Events' Section. Safety analysis set: all randomized participants who received at least 1 dose of study treatment.	
End point type	Primary
End point timeframe: From first dose of study drug up to Week 15	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The endpoint is descriptive in nature.

Primary: Slope Coefficient (β_2) of Area Under the Plasma Concentration Versus Time Curve Over a Dosing Interval at Steady State (AUCtau) for Percent Change From Baseline in 28-Day FOS Frequency During the Treatment Period

End point title	Slope Coefficient (β_2) of Area Under the Plasma Concentration Versus Time Curve Over a Dosing Interval at Steady State (AUCtau) for Percent Change From Baseline in 28-Day FOS Frequency During the Treatment Period ^[2]
-----------------	--

End point description:

Percent change in 28-day FOS frequency during treatment period compared to baseline period as response variable and steady-state pharmacokinetic (PK) parameter of interest as exposure variable. Exposure was evaluated using AUCtau. Analysis model included 28-day FOS frequency at baseline as a covariate. Results were reported as least-squares (LS) mean estimate of percent change in 28-day FOS frequency for a 1-unit increase in PK parameter (β_2 [slope]). The effect size and 95% confidence interval (CI) were obtained for each PK parameter of interest. PK analysis set: participants who received NBI-921352 and had at least 1 reportable plasma concentration value for NBI-921352. 'Overall number of participants analyzed' = participants evaluable for this endpoint. As pre-specified, data for this endpoint was collected and reported as a single Arm/Group for any participant who received at least 1 dose of study drug, regardless of their dose level, and who had evaluable data for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

Day 1 (predose) up to Day 77

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The statistical analysis was not planned for this endpoint.

End point values	NBI-921352			
Subject group type	Subject analysis set			
Number of subjects analysed	70

Secondary: Percent Change From Baseline in Monthly FOS Frequency During the Treatment Period

End point title	Percent Change From Baseline in Monthly FOS Frequency During the Treatment Period
-----------------	---

End point description:

Percent change from baseline in 28-day FOS frequency was calculated as: $([\text{frequency during the specified period} - \text{frequency during baseline}] \div \text{frequency during baseline}) \times 100$, where frequency during each period was calculated as: $(\text{number of seizures in the period} \div \text{number of non-missing days in the period}) \times 28$. Non-missing days for seizure diary data were defined as days with >0 seizures documented or confirmation that no seizures occurred on that day. The baseline 28-day FOS frequency was based on seizure data reported in the 56 days immediately preceding randomization. LS mean and standard error (SE) were analyzed using analysis of covariance (ANCOVA). Full analysis set included all randomized participants who received at least 1 dose of study treatment and had at least 1 postbaseline seizure diary entry.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline over the 11-Week treatment period (Day 1 through Day 77)

Secondary: Number of Clinical Global Impression of Change (CGI-C) Responders at Day 77

End point title	Number of Clinical Global Impression of Change (CGI-C) Responders at Day 77
-----------------	---

End point description:

The CGI-C is a 7-point scale that required the investigator (or qualified designee) to rate the overall change in the participant's clinical condition since the initiation of study drug dosing. Scores ranged from 1 (very much improved) to 7 (very much worse).

Participants whose CGI-C score was either a 1 (very much improved) or a 2 (much improved) were classified as responders.

The number of participants who were classified as responders has been reported.

Full analysis set included all randomized participants who received at least 1 dose of study treatment, and had at least 1 postbaseline seizure diary entry.
