EU Clinical Trials Register

Clinical trial results:
Randomised, double-blind, placebo-controlled and parallel dose group trial to investigate efficacy and safety of multiple doses of oral BI 690517 over 14 weeks, alone and in combination with empagliflozin, in patients with diabetic and non-diabetic chronic kidney disease

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 August 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 June 2023
Global end of trial reached?	Yes
Global end of trial date	10 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives of the trial were to demonstrate the efficacy of BI 690517, alone and in combination with empagliflozin, and to characterise the BI 690517 dose-response relationship in patients with diabetic and non-diabetic chronic kidney disease (CKD) by assessing three doses and placebo.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all subjects as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 February 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	764
From 65 to 84 years	950
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

In the run-in period patients got empagliflozin or placebo to empagliflozin. The run-in period was followed by a second randomization at which patients were 1:1:1:1 randomized to a treatment period to receive one of three doses of BI 690517 or placebo matching BI 690517 in combination with the background medication assigned in the run-in period.

Pre-assignment

Screening details:

Due to limitations of the EudraCT Results Form 2 patients who did not complete the Run-in period (RP) for the Placebo arm are entered under the milestone completed of the RP.
The 2 patients who did not complete the RP were mistakenly randomized to the treatment period (TP) but were not treated during the TP with BI 690517 or placebo to BI 690517.

Period 1

Period 1 title	Run-in period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

Patients, investigators and everyone involved in trial conduct or analysis or with any other interest in this double-blind trial remained blinded with regard to the randomised treatment assignments.

Arms

Are arms mutually exclusive?	Yes
Arm title	Run-in period: 10 mg Empa

Arm description:

Patients received during the run-in period 10 milligrams (mg) of empagliflozin (Empa) once daily orally for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Empagliflozin film-coated tablets 10mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received during the run-in period one film-coated tablet of 10 milligrams (mg) of empagliflozin (Empa) once daily orally for 8 weeks.

Arm title	Run-in period: Placebo to Empa 10 mg

Arm description:

Patients received during the run-in period placebo matching empagliflozin (Empa) 10 milligrams (mg) once daily orally for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to empagliflozin film-coated tablets 10mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received during the run-in period one film-coated tablet of 10 milligrams (mg) of placebo matching empagliflozin (Empa) once daily orally for 8 weeks.

Number of subjects in period 1	Run-in period: 10 mg Empa	Run-in period: Placebo to Empa 10 mg
Started	356	358
Treated with Empa or Placebo to Empa	356	357
Completed	332	332
Not completed	24	26
Adverse event, non-fatal	5	5
No reason available	2	2
Burden of study procedures	2	2
Other reason but not sponsor termination	14	16
Change of residence	1	-
Not treated	-	1

Period 2

Period 2 title	Screened for treatment period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

Patients, investigators and everyone involved in trial conduct or analysis or with any other interest in this double-blind trial remained blinded with regard to the randomised treatment assignments.

Arms

Are arms mutually exclusive?	Yes
Arm title	Run-in period: 10 mg Empa

Arm description:

Patients received during the run-in period 10 milligrams (mg) of empagliflozin (Empa) once daily orally for 8 weeks.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Arm title	Run-in period: Placebo to Empa 10 mg

Arm description:

Patients received during the run-in period placebo matching empagliflozin (Empa) 10 milligrams (mg) once daily orally for 8 weeks.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Number of subjects in period 2	Run-in period: 10 mg Empa	Run-in period: Placebo to Empa 10 mg
Started	332	332
Completed the RP and screened for TP	332	330
Entered to TP without completing the RP	0 [1]	2 [2]
Completed	298	288
Not completed	34	44
Did not meet Treatment Period eligibility criteria	34	44

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.
Justification: Only 2 patients in the arm were eligible for this milestone.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.
Justification: None of the patients who in this arm were eligible for this milestone.

Period 3

Period 3 title	Treatment period
Is this the baseline period?	Yes[3]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

Patients, investigators and everyone involved in trial conduct or analysis or with any other interest in this double-blind trial remained blinded with regard to the randomised treatment assignments.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment period: 10 mg Empa + 3 mg BI 690517

Arm description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 3 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 3 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Arm type	Experimental
Investigational medicinal product name	Empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 mg of empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 3 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 3 milligrams (mg) of BI 690517 once daily (QD) for 14 weeks.

Arm title	Treatment period: 10 mg Empa + 10 mg BI 690517

Arm description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 10 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 10 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Arm type	Experimental
Investigational medicinal product name	Empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 mg of empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of BI 690517 orally for 14 weeks.

Arm title	Treatment period: 10 mg Empa + 20 mg BI 690517

Arm description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 20 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 20 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Arm type	Experimental
Investigational medicinal product name	Empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 mg of empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received two film-coated tablets of 10 milligrams (mg) of BI 690517 (total BI 690517 dose=20 mg) orally for 14 weeks.

Arm title	Treatment period: 10 mg Empa + Placebo to BI 690517

Arm description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received placebo matching BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received placebo matching BI 690517 and 10 mg empagliflozin for 14 weeks.

Arm type	Placebo

Investigational medicinal product name	Placebo to BI 690517 film-coated tablets 3 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 3 mg of placebo to BI 690517 orally for 14 weeks.

Investigational medicinal product name	Empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 mg of empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	Placebo to BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received either one film-coated tablet of 10 mg of placebo to BI 690517 or 2 film-coated tablets of 10 mg of placebo to BI 690517 orally for 14 weeks.

Arm title	Treatment period: Placebo to Empa 10 mg + 3 mg BI 690517

Arm description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 3 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 3 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Arm type	Experimental
Investigational medicinal product name	Placebo to empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of placebo to empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 3 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 3 milligrams (mg) of BI 690517 once daily (QD) orally for 14 weeks.

Arm title	Treatment period: Placebo to Empa 10 mg + 10 mg BI 690517

Arm description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 10 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 10 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Arm type	Experimental

Investigational medicinal product name	Placebo to empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of placebo to empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of BI 690517 once daily (QD) orally for 14 weeks.

Arm title	Treatment period: Placebo to Empa 10 mg + 20 mg BI 690517

Arm description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 20 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 20 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Arm type	Experimental
Investigational medicinal product name	Placebo to empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of placebo to empagliflozin once daily (QD) orally for 14 weeks.

Investigational medicinal product name	BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received two film-coated tablets of 10 milligrams (mg) of BI 690517 (total BI 690517 dose=20 mg) orally for 14 weeks.

Arm title	Treatment period: Placebo to Empa 10 mg+Placebo to BI 690517

Arm description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received placebo matching BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received placebo matching BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to BI 690517 film-coated tablets 3 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 3 mg of placebo to BI 690517 orally for 14 weeks.

Investigational medicinal product name	Placebo to BI 690517 film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received either one film-coated tablet of 10 mg of placebo to BI 690517 or 2 film-coated tablets of 10 mg of placebo to BI 690517 orally for 14 weeks.

Investigational medicinal product name	Empagliflozin film-coated tablets 10 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received one film-coated tablet of 10 milligrams (mg) of placebo to empagliflozin once daily (QD) orally for 14 weeks.

Notes:

[3] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Baseline characteristics are reported for the participants who started the Treatment Period. 586 subjects were randomized to treatment period.

Urine Albumin Creatinine Ratio (UACR) at baseline			
UACR is a ratio between two measured substances i.e., albumine and creatinine and it is calculated as: (Urine albumin (milligram (mg)/deciliter (dL)))/(urine creatinine gram (g)/deciliter (dL))= UACR in mg/g. Albuminuria is present when UACR is greater than 30 mg/g and is a marker for chronic kidney disease (CKD). UACR measurements were collected on 2 consecutive days at 3 timepoints from Week -2 to Week 0 (i.e. Week 6-8 of Run-in period) for treatment period baseline. The randomised set (RS) was used to report the UACR at baseline.

Primary: Change from treatment period baseline in log transformed Urine Albumin Creatinine Ratio (UACR) measured in First Morning Void (FMV) urine after 14 weeks - all patients

End point title	Change from treatment period baseline in log transformed Urine Albumin Creatinine Ratio (UACR) measured in First Morning Void (FMV) urine after 14 weeks - all patients

End point description:

The adjusted mean change (95% confidence interval) in log transformed FMV UACR from baseline at 14 weeks is presented.
The adjusted means and 95 % confidence intervals were estimated by restricted maximum likelihood-based mixed models for repeated measures ((REML)−based MMRM) which includes the fixed effects of treatment at each visit, baseline (continuous) at each visit, and baseline, visit, treatment, background medication (empagliflozin or placebo matching empagliflozin) and randomisation stratum as main effects, as well as random effects of patient.

Full Analysis Set (FAS): This patient set included all randomised patients to one of 3 doses of BI 690517 (3mg QD, 10 mg QD or 20 mg QD) or placebo matching BI 690517 who had at least one baseline measurement of UACR at Week -2, -1, or 0 (Week 6, 7 or 8 of the Run-in Period) and at least one post-baseline measurement when patients were still on treatment of BI 690517 or placebo matching BI 690517.

End point type	Primary

End point timeframe:

The MMRM model is a longitudinal analysis and it incorporated UACR measurements from baseline (Week 6,7 or 8 of the Run-in period) and Week 6, Week 10 and Week 12-14 of Treatment period.

Secondary: UACR response II, defined as decrease of at least 15% absolute change in FMV urine of UACR from treatment period baseline to 14 weeks - background therapy of placebo matching empagliflozin - Last observation on treatment carried forward (LOCF)

End point title	UACR response II, defined as decrease of at least 15% absolute change in FMV urine of UACR from treatment period

	baseline to 14 weeks - background therapy of placebo matching empagliflozin - Last observation on treatment carried forward (LOCF)[137]

End point description:

Number of patients with UACR response II for patients with background therapy of placebo matching empagliflozin in the Run-in period is reported. UACR response II was defined as decrease of at least 15% absolute change in First Morning Void (FMV) urine of UACR from treatment period baseline to 14 weeks.
LOCF uses the last value observed on treatment to substitute all missing values until Week 14.

This endpoint is reporting statistics for all randomised patients to one of 3 doses of BI 690517 or placebo matching BI 690517 who received placebo to empagliflozin during the Run-in Period and who had at least one baseline measurement of UACR at Week -2, -1, or 0 (Week 6,7,8 of the Run-in Period) and at least one post-baseline measurement when patients were still on treatment with BI 690517 or placebo matching BI 690517.

End point type	Secondary

End point timeframe:

UACR measurements from baseline (Week 6,7 or 8 of the Run-in period) and Week 6, Week 10 and Week 12-14 of Treatment period were used for the last observation carried forward approach.

Notes:

[137] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: This endpoint is reporting statistics only for the patients who received placebo matching empagliflozin during the Run-in period.

End point values	Treatment period: Placebo to Empa 10 mg + 3 mg BI 690517	Treatment period: Placebo to Empa 10 mg + 10 mg BI 690517	Treatment period: Placebo to Empa 10 mg + 20 mg BI 690517	Treatment period: Placebo to Empa 10 mg+Placebo to BI 690517

[171] - P-value was rounded to four decimal places.

Secondary: UACR response I, defined as decrease of at least 30% absolute change in First Morning Void urine of UACR from treatment period baseline to 14 weeks - patients with background therapy of empagliflozin - Last observation on treatment carried forward

End point title	UACR response I, defined as decrease of at least 30% absolute change in First Morning Void urine of UACR from treatment period baseline to 14 weeks - patients with background therapy of empagliflozin - Last observation on treatment carried forward[172]

End point description:

Number of patients with UACR response I for patients with background therapy of empagliflozin in the Run-in period is reported. UACR response I was defined as decrease of at least 30% absolute change in First Morning Void urine of UACR from treatment period baseline to 14 weeks.
Last observation on treatment carried forward (LOCF) uses the last value observed on treatment to substitute all missing values until Week 14.

This endpoint is reporting statistics for all randomised patients to one of 3 doses of BI 690517 or placebo matching BI 690517 who received empagliflozin during the Run-in Period and who had at least one baseline measurement of UACR at Week -2, -1, or 0 (Week 6,7,8 of the Run-in Period) and at least one post-baseline measurement when patients were still on treatment with BI 690517 or placebo matching BI 690517.

End point type	Secondary

End point timeframe:

UACR measurements from baseline (Week 6,7 or 8 of the Run-in period) and Week 6, Week 10 and Week 12-14 of Treatment period were used for the last observation carried forward approach.

Notes:

[172] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: This endpoint is reporting statistics only for the patients who received empagliflozin during the Run-in period.

End point values	Treatment period: 10 mg Empa + 3 mg BI 690517	Treatment period: 10 mg Empa + 10 mg BI 690517	Treatment period: 10 mg Empa + 20 mg BI 690517	Treatment period: 10 mg Empa + Placebo to BI 690517

Statistical analyses

Statistical analysis title	Statistical analysis 1

Statistical analysis description:

The odds ratio, 95% confidence interval, and p-value were calculated based on logistic regression of binary outcome adjusting for treatment, and stratification factors as covariates. Randomisation stratification was used, which is based on estimated glomerular filtration rate (eGFR) and urine albumin creatinine ratio (UACR) levels at screening.

Comparison groups	Treatment period: 10 mg Empa + 3 mg BI 690517 v Treatment period: 10 mg Empa + Placebo to BI 690517

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first study drug administration in the treatment period until end of the residual effect period (i.e. 7 days for empagliflozin and BI 690517), up to 15 weeks.

Adverse event reporting additional description:

Adverse events were planned in the protocol and statistical analysis plan to be reported for the treated set.
Treated Set (TS): This patient set included all patients who received at least one dose of BI 690517 or placebo matching BI 690517.

Assessment type	Systematic

Reporting groups

Reporting group title	Treatment period: 10 mg Empa + 3 mg BI 690517

Reporting group description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 3 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 3 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Reporting group title	Treatment period: 10 mg Empa + 20 mg BI 690517

Reporting group description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 20 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 20 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Reporting group title	Treatment period: 10 mg Empa + 10 mg BI 690517

Reporting group description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 10 milligrams (mg) of BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received 10 mg BI 690517 and 10 mg empagliflozin for 14 weeks.

Reporting group title	Treatment period: Placebo to Empa 10 mg + 20 mg BI 690517

Reporting group description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 20 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 20 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Reporting group title	Treatment period: Placebo to Empa 10 mg + 10 mg BI 690517

Reporting group description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 10 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 10 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Reporting group title	Treatment period: Placebo to Empa 10 mg + 3 mg BI 690517

Reporting group description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received 3 mg of BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received 3 mg BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Reporting group title	Treatment period: Placebo to Empa 10 mg + Placebo to BI 690517

Reporting group description:

This arm includes patients who received placebo matching empagliflozin (Empa) 10 milligrams (mg) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received placebo matching BI 690517 once daily (QD) orally in combination with placebo matching empagliflozin 10 mg QD orally. Patients received placebo matching BI 690517 and placebo matching empagliflozin 10 mg for 14 weeks.

Reporting group title	Treatment period: 10 mg Empa + Placebo to BI 690517

Reporting group description:

This arm includes patients who received 10 mg of empagliflozin (Empa) during the run-in period and met the eligibility criteria to enter the treatment period. In the treatment period patients received placebo matching BI 690517 once daily (QD) orally in combination with 10 mg of empagliflozin QD orally. Patients received placebo matching BI 690517 and 10 mg empagliflozin for 14 weeks.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 October 2021	Global protocol amendment 1 included the following changes in the protocol. The screening period was extended from 14 to 21 days to allow for any allowed repetition of screening procedures. The Flowchart was changed to detect and mitigate the potential risk of adrenal insufficiency by addition of extensive serum and urine cortisol sampling and addition of an adrenocorticotropic hormone (ACTH) challenge test (on an as-needed basis based on cortisol levels); serum cortisol was added to the list of hormones to be tested in safety laboratory parameters. The Flowchart was changed to allow pre-screening for urine albumin creatinine ratio (UACR) and estimated Glomerular Filtration Rate (eGFR) subject to pre-screening informed consent. Legal adult age (according to local legislation) as part of the inclusion criteria was added on top of 18+ years of age. Patients who needed to or wished to continue the intake of restricted medications or any drug considered likely to interfere with the safe conduct of the trial were excluded. An exclusionary criterion regarding intake biotin or related preparations was introduced. Patients who had taken Vitamin B7, Vitamin H, or coenzyme-R at doses ≥5 mg/day (including food supplements) within 72 h of Visit 1 or who planned to take above dosesof biotin during the trial were excluded. The original cut off value of increase in serum cortisol of 200 nmol/L at 30 min postinjection was modified to absolute cortisol value of <18 µg/dL (496.6 nmol/L) at 30 min (± 5 min) after injection of ACTH at Visit 1 to follow the Cosyntropin label and relevant United States (US) guidelines. Any clinically relevant abnormal laboratory value was expanded to specifically include a serum cortisol level <5 µg/dL (138.0 nmol/L) at Visit 1 or until first randomization to exclude those patients at greater risk of adrenal insufficiency.
25 October 2021	Global protocol amendment 1 continued: Added requirements for discontinuation of trial treatment (BI 690517/placebo) in patients who develop Cushing's syndrome, adrenal insufficiency (including cortisol level <18 µg/dL 30 min (±5 min) after ACTH application), or cortisol levels <3 µg/dL (82.8 nmol/L) at any point in the trial should. Added requirement to permanently discontinue patients who permanently discontinue empagliflozin/placebo during the randomised run-in period due to any reason. Adrenal insufficiency and Cushing's syndrome were added as an AESI to the protocol. Requirements for ACTH challenge tests during the study and at the end of treatment were added. The shipment of trial medication from the site to the patient's home was allowed to support regular visits performed at the patient's home specified by the Flowchart. Management of eGFR decrease was specified. Management of serum cortisol decrease was specified.
30 March 2022	Global protocol amendment 2 included the following changes. Flowchart was modified to remove 24-hour urine sample at EOT for patients who discontinue prematurely before initiation of treatment with BI 690517/placebo. Inclusion criteria on chronic kidney disease as baseline condition was simplified to include patients with any kind of diagnosed chronic kidney disease according to Investigator's opinion and that diagnosis of chronic kidney disease (CKD) could be reached by standard clinical method and no biopsy was required. An additional criterion mandating screening of patients before the second randomization to treatment period was added to exclude patients with known hepatic cirrhosis (Child Pugh A, B or C), or other liver disease causing impaired liver function according to investigator's judgement. An additional criterion was added to exclude those patients with CKD in whom no benefit to treatment with BI 690517 was expected due to underlying causes of CKD attributed to either of the following: CKD secondary due to malignancy (e.g. Cast-Nephropathy, AL-amyloidosis), CKD secondary to infectious disease (e.g. Hepatitis-/HIV-associated), autosomal-dominant polycystic kidney disease. Clarification was provided regarding unblinding status at last patient last visit primary endpoint snapshot. Methotrexate was added to the restricted medications list.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

 None reported
