

Clinical trial results:

A Phase 2, Randomized, Double-Blind, Double-Dummy, Placebo-Controlled Study Evaluating the Safety and Efficacy of Semaglutide, and the Fixed-Dose Combination of Cilofexor and Firsocostat, Alone and in Combination, in Subjects with Compensated Cirrhosis (F4) due to Nonalcoholic Steatohepatitis (NASH)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 December 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 November 2024
Global end of trial reached?	Yes
Global end of trial date	09 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The goal of this clinical study is to understand whether the study drugs, semaglutide (SEMA) with the fixed-dose combination (FDC) of cilofexor/firsocostat (CILO/FIR), cause fibrosis improvement and Nonalcoholic Steatohepatitis (NASH) resolution in participants with cirrhosis due to NASH.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 349
Country: Number of subjects enrolled	Canada: 32
Country: Number of subjects enrolled	France: 29
Country: Number of subjects enrolled	Japan: 17
Country: Number of subjects enrolled	Australia: 16
Country: Number of subjects enrolled	Spain: 14
Worldwide total number of subjects	457
EEA total number of subjects	43

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	257
From 65 to 84 years	200
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in the United States, Canada, France, Japan, Australia and Spain.

Pre-assignment

Screening details:

1595 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	SEMA + CILO/FIR FDC
------------------	---------------------

Arm description:

Participants received semaglutide (SEMA) 3.0 mg/mL subcutaneous (SC) injection once weekly and cilofexor and firsocostat (CILO/FIR) 30 mg/20 mg fixed-dose combination (FDC) tablet orally, once daily up to 72 weeks.

Arm type	Experimental
Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered as subcutaneous injection.

Investigational medicinal product name	Cilofexor/Firsocostat
Investigational medicinal product code	GS-9674/GS-0976
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered orally.

Arm title	SEMA + PTM CILO/FIR
------------------	---------------------

Arm description:

Participants received SEMA 3.0 mg/mL SC injection, once weekly and Placebo-To-Match (PTM) CILO/FIR FDC tablet orally, once daily up to 72 weeks.

Arm type	Experimental
Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered as subcutaneous injection.

Investigational medicinal product name	PTM CILO/FIR
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Administered orally.	
Arm title	PTM SEMA + CILO/FIR FDC

Arm description:

Participants received PTM SEMA SC injection, once weekly and CILO/FIR 30 mg/20 mg FDC tablet orally, once daily up to 72 weeks.

Arm type	Experimental
Investigational medicinal product name	PTM SEMA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered as subcutaneous injection.

Investigational medicinal product name	Cilofexor/Firsocostat
Investigational medicinal product code	GS-9674/GS-0976
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered orally.

Arm title	PTM SEMA + PTM CILO/FIR
------------------	-------------------------

Arm description:

Participants received PTM SEMA SC injection, once weekly and PTM CILO/FIR FDC tablet orally, once daily up to 72 weeks.

Arm type	Experimental
Investigational medicinal product name	PTM SEMA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered as subcutaneous injection.

Investigational medicinal product name	PTM CILO/FIR
Investigational medicinal product code

Primary: Percentage of Participants Who Achieved \geq 1-Stage Improvement in Fibrosis Without Worsening of Nonalcoholic Steatohepatitis (NASH) at Week 72 in Semaglutide (SEMA) + Cilofexor/Firsocostat (CILO/FIR) Fixed Dose Combination (FDC) Versus Placebo Groups

End point title	Percentage of Participants Who Achieved \geq 1-Stage Improvement in Fibrosis Without Worsening of Nonalcoholic Steatohepatitis (NASH) at Week 72 in Semaglutide (SEMA) + Cilofexor/Firsocostat (CILO/FIR) Fixed Dose Combination (FDC) Versus Placebo Groups ^[1]
End point description: Fibrosis improvement was defined as \geq 1-stage decrease from baseline in fibrosis according to the NASH clinical research network (CRN) classification. Worsening of NASH was defined as \geq 1-point increase from baseline in hepatocellular ballooning or lobular inflammation. Clopper-Pearson method was used in outcome measure analysis in each arm. Percentages were rounded-off. Participants in the Full Analysis Set in SEMA + CILO/FIR FDC and PTM SEMA + PTM CILO/FIR were analyzed. The Full Analysis Set included all randomized participants who received at least 1 dose of study drug.	
End point type	Primary
End point timeframe: Week 72	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: The endpoint was planned only for arms: SEMA + CILO/FIR vs PTM SEMA + PTM CILO/FIR.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 June 2021	<ul style="list-style-type: none">• Included collection of a single pharmacokinetics (PK) blood sample at the early termination (ET) visit (anytime) and at unscheduled visits (anytime) that were performed for the purpose of safety evaluation (eg, serious adverse event follow-up).• "Anthropometric measurements" changed to "measurement of hip and waist circumference" throughout.• Included assessment of any findings related to gallstones or other hepatobiliary disease in addition to hepatocellular carcinoma (HCC) during screening and on-study abdominal ultrasounds.• Data monitoring committee (DMC) to be notified if study drug was withheld.• The protocol synopsis and the study procedures table were updated to align with the updates to the body of the protocol.• Administrative, editorial, and formatting updates, changes, corrections, and clarifications were made, where appropriate, throughout the document.
26 October 2023	<ul style="list-style-type: none">• Changed the primary objective to evaluate only whether the combination of SEMA with the fixed-dose combination (FDC) of CILO/FIR causes fibrosis improvement without worsening of NASH compared with placebo; NASH resolution was no longer evaluated as part of the primary objective. The rationale for this change was that increasingly fibrosis improvement was recognized as the biomarker most likely to predict clinical benefit in a cirrhotic NASH study population, and this change allow fibrosis improvement to be tested independently as the highest priority hypothesis.• Added a secondary objective to evaluate whether the combination of SEMA with the FDC of CILO/FIR causes NASH resolution in participants with compensated cirrhosis due to NASH, as compared with placebo.• Changed coprimary endpoints to a single primary endpoint of fibrosis improvement without worsening of NASH in order to test fibrosis improvement independently as the highest priority hypothesis, appropriate for a cirrhotic NASH study population.• Information for statistical testing of the primary and secondary endpoints was changed to order analysis objectives in keeping with the changes to the endpoints, and for consistency with changes made in other sections.• Estimand strategy was added and updated for primary/secondary endpoints based on the modifications made to the endpoints in the protocol.• Statistical considerations section was updated to add "power calculation."• Dose escalation schedule for SEMA was updated.• A list of study interventions and their marketing authorization status was added.• New section regarding definition of serious adverse drug reaction was added.• Section for "Liver-Related Clinical Events" was added.• Pregnancy reporting process and time period was updated.• The text related to "repeating liver-related laboratory assessments (ALT, AST, ALP, GGT, total bilirubin, INR) within 72 hours of initial results (or as soon as possible)" removed from toxicities

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
