Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 December 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 December 2024
Global end of trial reached?	Yes
Global end of trial date	10 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of the study is to determine the safety and tolerability of pembrolizumab/vibostolimab (MK-7684A) in hematological malignancies. This study will also evaluate the overall response rate (ORR), the duration of response (DOR), and disease control rate (DCR) following administration of pembrolizumab/vibostolimab. In addition, this study will characterize pharmacokinetic (PK) profile of vibostolimab (MK-7684).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 September 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 7
Country: Number of subjects enrolled	Canada: 4
Country: Number of subjects enrolled	Chile: 8
Country: Number of subjects enrolled	Denmark: 12
Country: Number of subjects enrolled	France: 13
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Hungary: 20
Country: Number of subjects enrolled	Israel: 23
Country: Number of subjects enrolled	Italy: 15
Country: Number of subjects enrolled	Poland: 21
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Spain: 10
Country: Number of subjects enrolled	Taiwan: 4
Country: Number of subjects enrolled	Türkiye: 17
Country: Number of subjects enrolled	Ukraine: 9
Country: Number of subjects enrolled	United States: 17
Worldwide total number of subjects	192
EEA total number of subjects	95

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	122
From 65 to 84 years	66
85 years and over	4

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

One hundred ninety-two participants were allocated, 1 participant was allocated but did not receive treatment due to worsening of underlying disease. No participants were enrolled into Part 2 of the study (The study was closed with amendment 5 after the last subject completed 35 cycles of the first course of Part 1).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A Pembrolizumab/vibostolimab coformulation

Arm description:

Participants with classic Hodgkin's lymphoma (cHL) or primary mediastinal Bcell lymphoma (PMBCL) who are relapsed or refractory to at least 1 line of prior therapy (cHL) of at least 2 lines of prior therapies (PMBCL) received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Arm title	Cohort B Pembrolizumab/vibostolimab coformulation
------------------	---

Arm description:

Participants with cHL or PMBCL who are relapsed or refractory to at least 2 lines of prior therapies (cHL) of at least 3 lines of prior therapies (PMBCL) received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Arm title	Cohort C Pembrolizumab/vibostolimab coformulation
------------------	---

Arm description:

Participants with relapsed or refractory follicular lymphoma (FL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Arm title	Cohort D Pembrolizumab/vibostolimab coformulation
------------------	---

Arm description:

Participants with relapsed or refractory diffuse large B-cell lymphoma (DLBCL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Arm title	Cohort E Pembrolizumab/vibostolimab coformulation
------------------	---

Arm description:

Participants with relapsed or refractory multiple myeloma (MM) following at least 3 lines of therapy and have exhausted all approved lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Arm title	Cohort F Pembrolizumab/vibostolimab coformulation
------------------	---

Arm description:

Participants with relapsed or refractory non-Hodgkin's lymphoma (NHL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab/vibostolimab coformulation
Investigational medicinal product code	
Other name	MK7684A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pembrolizumab 200 mg + vibostolimab 200 mg/20 mL vial IV infusion

Primary: Percentage of Participants with a Dose-Limiting Toxicity (DLT)

End point title	Percentage of Participants with a Dose-Limiting Toxicity
End point description: A DLT is defined as an event with toxicity including the type, severity, time of onset, time of resolution, and the probable association with study treatment that are not due to pre-existing conditions as defined by the Common Terminology Criteria for Adverse Events Version 5.0 (CTCAE 5.0). Percentage of participants who experience a DLT per CTCAE 5.0 are reported. The analysis population consists of all participants who received at least one dose of study intervention and that finished the DLT evaluation period without a DLT or experienced a DLT in the DLT evaluation period.	
End point type	Primary
End point timeframe: Up to approximately 6 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, no statistical analysis was planned for this endpoint.

Secondary: Objective Response Rate (ORR) as assessed by Lugano 2014 Classification (Cohorts A-D & F)

End point title	Objective Response Rate (ORR) as assessed by Lugano 2014 Classification (Cohorts A-D & F)
End point description:	
ORR was assessed based on Lugano 2014 Classification. ORR is defined as the percentage of the participants who had complete response (CR) or partial response (PR) and was evaluated using computed tomography (CT) and positron emission tomography (PET)-CT. CR is complete metabolic (no/minimal fluorodeoxyglucose [FDG] uptake) and radiologic response (target lesions regress to ≤ 5 cm in longest transverse diameter of a lesion) and no new lesions. PR is partial metabolic (moderate/high FDG uptake) and radiologic response ($\geq 50\%$ decrease in sum of product diameters for multiple lesions of up to 6 target measurable nodes and extranodal sites, no increase in lesions, and spleen regressed by $>50\%$ in length beyond normal). ORR for Cohorts A-D and F is presented. Cohort E is presented separately. The analysis population consisted of all participants who have received at least one dose of study intervention and had ORR measured by Lugano 2014 Classification	
End point type	Secondary

End point title	Objective Response Rate (ORR) as assessed by the 2016 International Myeloma Working Group (IMWG) Response Criteria (Cohort E)
-----------------	---

End point description:

ORR is the percentage of the participants with either a stringent complete response (sCR), CR, very good partial response (VGPR), or PR according to the IMWG Response Criteria. CR = negative immunofixation of serum and urine AND disappearance of any soft tissue plasmacytomas AND <5% plasmacytomas in the bone marrow; sCR=stringent complete response, CR as above PLUS normal serum free light-chain (FLC) assay ratio and absence of clonal cells in bone marrow; VGPR = serum and urine M-component detectable by immunofixation but not on electrophoresis OR ≥ 90% reduction in serum M-component plus urine M-component <100 mg/24 hr; PR = ≥50% reduction of serum Mprotein and reduction in 24-hour urinary M-protein by ≥90% or to <200 mg/24 hours. ORR for Cohorts A-D and F were presented in a previous outcome measure. The analysis population included all participants who have received at least one dose of study intervention and had ORR measured by 2016 IMWG Response Criteria.

Secondary: Duration of Response (DOR) as assessed by Lugano 2014 Classification (Cohorts A-D & F)

End point title	Duration of Response (DOR) as assessed by Lugano 2014 Classification (Cohorts A-D & F)
-----------------	--

End point description:

For participants who demonstrate a confirmed CR or PR, DOR is defined as the time from CR or PR to documented disease progression or death. Participants are assessed using CT and PET-CT and response was evaluated based on the Lugano 2014 Classification. CR is complete metabolic (no/minimal FDG uptake) and radiologic response (target lesions regress to ≤ 5 cm in longest transverse diameter of a lesion) and no new lesions. PR is partial metabolic (moderate/high FDG uptake) and radiologic response ($\geq 50\%$ decrease in sum of product diameters (SPD) for multiple lesions of up to 6 target measurable nodes and extranodal sites, no increase in lesions, and spleen regressed by $>50\%$ in length beyond normal). DOR for Cohorts A-D and F is presented. Cohort E is presented separately. The analysis population included all participants who have received at least one dose of study intervention and had a response measured by measured by Lugano 2014 Classification

Reporting groups

Reporting group title	COHORT A
-----------------------	----------

Reporting group description:

Participants with classic Hodgkin's lymphoma (cHL) or primary mediastinal Bcell lymphoma (PMBCL) who are relapsed or refractory to at least 1 line of prior therapy (cHL) or at least 2 lines of prior therapies (PMBCL) received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Reporting group title	COHORT B
-----------------------	----------

Reporting group description:

Participants with cHL or PMBCL who are relapsed or refractory to at least 2 lines of prior therapies (cHL) or at least 3 lines of prior therapies (PMBCL) received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Reporting group title	COHORT E
-----------------------	----------

Reporting group description:

Participants with relapsed or refractory multiple myeloma (MM) following at least 3 lines of therapy and have exhausted all approved lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Reporting group title	COHORT D
-----------------------	----------

Reporting group description:

Participants with relapsed or refractory diffuse large B-cell lymphoma (DLBCL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Reporting group title	COHORT F
-----------------------	----------

Reporting group description:

Participants with relapsed or refractory non-Hodgkin's lymphoma (NHL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

Reporting group title	COHORT C
-----------------------	----------

Reporting group description:

Participants with relapsed or refractory follicular lymphoma (FL) following at least 2 lines of therapy received pembrolizumab/vibostolimab (coformulation of 200 mg pembrolizumab and 200 mg vibostolimab) via intravenous IV infusion once every 3 weeks (Q3W) for up to 35 cycles up to approximately 2 years.

occurrences (all)	2	1	0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 October 2021	Amendment 2: To incorporate changes requested by various country Health Authorities (Germany, Spain, France, and Denmark)
04 March 2022	Amendment 3: Addition of an inclusion criterion pertaining to prior use of brentuximab vedotin in Cohort B participants with cHL in Germany-specific requirements per the Federal Institute for Drugs and Medical Devices (BfArM) request. In addition, added an exception for participants in Cohort E who are unable to receive all regionally approved therapies as part of their prior lines of treatment. Minor discrepancies were corrected for clarification.
29 August 2022	Amendment 4: Merck Sharp & Dohme Corp. underwent an entity name and address change to Merck Sharp & Dohme LLC, Rahway, NJ, USA. This conversion resulted only in an entity name change and update to the address.
16 February 2024	Amendment 5: To redefine the end of the study language, because the study primary objective has been met and additional data are not required.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
