

Clinical trial results:

A Phase 3, Randomized, Observer-blind, Controlled, Multicenter, Clinical Study to Evaluate Immunogenicity and Safety of an MF59-adjuvanted Quadrivalent Subunit Inactivated Influenza Vaccine in Comparison with a Licensed Quadrivalent Influenza Vaccine, in Adults 50 to 64 Years of Age

Summary

EudraCT number	2021-001721-40
Trial protocol	DE EE
Global end of trial date	14 October 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 December 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 January 2022
Global end of trial reached?	Yes
Global end of trial date	14 October 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary Immunogenicity Objectives:

1. To demonstrate immunological noninferiority of aQIV versus a nonadjuvanted quadrivalent influenza comparator (QIV) in subjects 50-64 years of age, as measured by hemagglutination inhibition (HI) geometric mean titers (GMTs) and seroconversion rates (SCRs) for each vaccine strain, at 3 weeks after vaccination.
2. To demonstrate that aQIV induces a superior immune response compared with QIV in subjects 50-64 years of age as measured by HI GMTs at 3 weeks after vaccination for at least 2 of the 4 vaccine strains.

Protection of trial subjects:

This clinical study was designed, implemented, and reported in accordance with the ICH Harmonised Tripartite Guidelines for Good Clinical Practice (ICH E6(R2)), with applicable local regulations European Directive 2001/20/EC, United States (US) Code of Federal Regulations Title 21, and Japanese Ministry of Health, Labor, and Welfare, Seqirus codes on protection of human rights, and with the ethical principles laid down in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Estonia: 787
Country: Number of subjects enrolled	Germany: 513
Country: Number of subjects enrolled	United States: 744
Worldwide total number of subjects	2044
EEA total number of subjects	1300

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2044
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 6 centers in Estonia, 11 centers in Germany, and 12 centers in the US.

Pre-assignment

Screening details:

All enrolled subjects were randomized in the study.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	aQIV

Arm description:

Adjuvanted QIV containing 2 influenza type A strains and 2 influenza type B strains

Arm type	Experimental
Investigational medicinal product name	Adjuvanted Quadrivalent Influenza Vaccine (aQIV)
Investigational medicinal product code	
Other name	Fluad Tetra
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Single intramuscular injection (0.5 mL dose) on Day 1

Arm title	Comparator QIV
------------------	----------------

Arm description:

Non-adjuvanted comparator QIV containing 2 influenza type A strains and 2 influenza type B strains

Arm type	Active comparator
Investigational medicinal product name	Non-adjuvanted Quadrivalent Influenza Vaccine (QIV)
Investigational medicinal product code	
Other name	Fluarix Quadrivalent
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Single intramuscular injection (0.5 mL dose) on Day 1

Number of subjects in period 1	aQIV	Comparator QIV
Started	1027	1017
Completed	982	989
Not completed	45	28
Adverse event, serious fatal	1	-

Consent withdrawn by subject	6	8
Adverse event, non-fatal	-	1
Other	3	2
Lost to follow-up	35	17

Germany	259	254	513
United States	377	367	744
Received an influenza vaccination in the previous 3 influenza seasons			
Units: Subjects			
Yes	586	598	1184
No	441	419	860
Comorbidity Risk Score			
A subject's comorbidity risk score was obtained by adding scores for each applicable characteristic: age (<70; 70-74; 75-79; 80-89; ≥90 years); sex (female; male); number of outpatient visits during the previous year (0; 1-6; 7-12; ≥13); previous hospitalization due to pneumonia or influenza (no; yes); pre-existing comorbidity (pulmonary disease; heart disease; renal disease or renal transplant; dementia or stroke; nonhematological and hematological cancer). A cut-off score ≥50 defines higher probability of hospitalization due to pneumonia/influenza or death (Hak et al, J Infect Dis 2004).			
Units: Subjects			
<50	912	919	1831
≥50	115	98	213

End points

End points reporting groups

Reporting group title	aQIV
Reporting group description: Adjuvanted QIV containing 2 influenza type A strains and 2 influenza type B strains	
Reporting group title	Comparator QIV
Reporting group description: Non-adjuvanted comparator QIV containing 2 influenza type A strains and 2 influenza type B strains	
Subject analysis set title	FAS Immunogenicity
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: The Full Analysis Set (FAS) Immunogenicity is defined as all enrolled subjects who were randomized, received study vaccination and provided immunogenicity data at any time point.	
Subject analysis set title	PPS Immunogenicity
Subject analysis set type	Per protocol
Subject analysis set description: The Per Protocol Set (PPS) Immunogenicity is defined as all subjects in the FAS Immunogenicity who: had both Day 1 and Day 22 immunogenicity assessment; correctly received the vaccine (ie, received the vaccine to which the subjects were randomized and at the scheduled time points); had no protocol deviations leading to exclusion as defined prior to unblinding/analysis; were not excluded due to other reasons defined prior to unblinding or analysis.	
Subject analysis set title	Solicited Safety Set
Subject analysis set type	Safety analysis
Subject analysis set description: The Solicited Safety Set is defined as all exposed subjects with any solicited AE data including temperature measurements or use of analgesics/antipyretics.	
Subject analysis set title	Unsolicited Safety Set
Subject analysis set type	Safety analysis
Subject analysis set description: The Unsolicited Safety Set is defined as all exposed subjects who provided unsolicited AE data.	

Primary: Immunogenicity Endpoint: Geometric Mean Titer (GMT) and GMT Ratio of Hemagglutination Inhibition (HI) Antibodies at Day 22 for the A/H1N1, A/H3N2, B/Yamagata, and B/Victoria Vaccine Strains (PPS Immunogenicity)

End point title	Immunogenicity Endpoint: Geometric Mean Titer (GMT) and GMT Ratio of Hemagglutination Inhibition (HI) Antibodies at Day 22 for the A/H1N1, A/H3N2, B/Yamagata, and B/Victoria Vaccine Strains (PPS Immunogenicity)
End point description: The GMT ratio is defined as the geometric mean of the postvaccination HI titer for Comparator QIV over the geometric mean of the postvaccination HI titer for aQIV. Adjusted GMTs are presented.

Other pre-specified: Immunogenicity Endpoint: GMT and GMT Ratio of HI Antibodies at Day 22 for the A/H1N1, A/H3N2, B/Yamagata, and B/Victoria Vaccine Strains by Comorbidity Risk Score (Subgroup Analysis: <50) (FAS Immunogenicity)

End point title	Immunogenicity Endpoint: GMT and GMT Ratio of HI Antibodies at Day 22 for the A/H1N1, A/H3N2, B/Yamagata, and B/Victoria Vaccine Strains by Comorbidity Risk Score (Subgroup Analysis: <50) (FAS Immunogenicity)
-----------------	--

End point description:

The GMT ratio is defined as the geometric mean of the postvaccination HI titer for Comparator QIV over the geometric mean of the postvaccination HI titer for aQIV. Subgroup analysis by comorbidity risk score (<50; ≥50). Adjusted GMTs for subjects with a comorbidity risk score <50 are presented.

End point type	Other pre-specified

Reporting groups

Reporting group title	aQIV
-----------------------	------

Reporting group description:

Adjuvanted QIV containing 2 influenza type A strains and 2 influenza type B strains

Reporting group title	Comparator QIV
-----------------------	----------------

Reporting group description:

Non-adjuvanted comparator QIV containing 2 influenza type A strains and 2 influenza type B strains

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No nonserious unsolicited AEs were reported at a frequency >5% in either vaccine group during the study.

Serious adverse events	aQIV	Comparator QIV	
Total subjects affected by serious adverse events			
subjects affected / exposed	31 / 1027 (3.02%)	31 / 1016 (3.05%)	
number of deaths (all causes)	1	0	
number of deaths resulting from adverse events	1	0	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
B-cell lymphoma			
subjects affected / exposed	1 / 1027 (0.10%)	0 / 1016 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Bladder cancer			
subjects affected / exposed	0 / 1027 (0.00%)	1 / 1016 (0.10%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Endometrial adenocarcinoma			
subjects affected / exposed	1 / 1027 (0.10%)	0 / 1016 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Follicular lymphoma

Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 1027 (0.00%)	0 / 1016 (0.00%)	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 November 2021	Version 1.0 to Version 2.0 The main reasons for the protocol amendment were the following: 1. Updating of the CI for secondary objectives 2a and 2b to reflect the correct alpha. 2. Conducting database lock and unblinding in two stages to allow expedited CSR reporting. A Blinding Maintenance Plan was prepared to ensure blinding of relevant laboratory and statistical personnel was maintained until their activities had been completed. 3. Clarification of Exclusion Criteria #7b and #9, based on regulatory agency feedback. 4. Clarifications of reporting requirements for solicited AEs that start during Day 1-7 and continue beyond Day 14. 5. Correction of how the FAS would be analyzed in case of vaccination errors, based on regulatory agency feedback.
11 July 2022	Version 2.0 to Version 3.0 The main reasons for the protocol amendment were the following: 1. Reclassification of the secondary objective of immunogenicity persistence at 9 months after vaccination (Day 271) as an exploratory objective in order to expedite the primary and secondary immunogenicity results and report them with the complete safety data to support timely license applications in different regions. 2. Improvement in the definition of previous influenza vaccination as a stratification factor to consider subjects who had received an influenza vaccination in the previous 3 influenza seasons as previously vaccinated subjects (Yes) in order to acknowledge variability in timing of the annual influenza vaccination campaigns. 3. Correction of an inconsistency in the assessment and reporting of local solicited reactions to consider local events as being present if they measured ≥ 25 mm to ensure consistency with the approved labeling information for aQIV (Fluad Quadrivalent/Quad/Tetra).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
