

Clinical trial results:

A Phase 1/2 Open-label, Multiple-dose, Dose-escalating Clinical Trial of the Safety and Tolerability of GTX-102 in Pediatric Patients With Angelman Syndrome (AS)

Summary

EudraCT number	2021-001793-36
Trial protocol	DE ES FR
Global end of trial date	08 January 2025

Results information

Result version number	v2 (current)
This version publication date	08 May 2026
First version publication date	23 January 2026
Version creation reason	- New data added to full data set - Secondary endpoint data added

Trial information

Trial identification

Sponsor protocol code	GTX-102-001
-----------------------	-------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04259281

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 January 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 January 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of multiple-ascending doses of GTX-102 administered by intrathecal (IT) injection to patients with AS.

Protection of trial subjects:

All participants, parents and/or legal guardians of the participant will be provided with an Information Sheet and/or Consent Form describing this study and providing sufficient information to make an informed decision about the participation of their represented participant in this study. Where required, consent will be sought from the parents and/or legal guardian of the participant. The Informed Consent Forms (ICFs) and Patient Informed Consent Forms (PICFs) will include all elements required by ICH, Good Clinical Practice (GCP) and applicable regulatory requirements. The Information Sheet and/or Consent Form will be submitted with the protocol for review and approval by the relevant Ethical Review Board for the study in each country. The formal consent of a participant, using the Informed Consent Form approved by the relevant Ethical Review Board, must be obtained before that participant undergoes any study procedure. The consent form must be signed by the participant's parent/legal guardian, and the Investigator-designated research professional obtaining the consent. Where required by the relevant Ethical Review Board, a witness may sign the consent form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 February 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	74
EEA total number of subjects	16

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	60
Adolescents (12-17 years)	14
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 74 participants were enrolled sequentially into 13 cohorts. After a dosing pause, the participants enrolled in Cohorts 1 and 2 restarted in a redosing cohort. The single Cohort 3 participant continued to be followed in an expanded access trial.

Pre-assignment

Screening details:

Per the Statistical Analysis Plan (SAP), the analysis treatment groups were defined as Cohorts 1-3, US Redosing Cohorts 1-2, Cohorts 4-7, Cohorts A & B, Cohorts C & D and US 2 mg/Cohort E.

Period 1

Period 1 title	Original Dosing Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	GTX-102 Cohorts 1-3
-----------	---------------------

Arm description:

Participants received doses ranging from 3.3 to 20 mg followed by dose escalation up to a maximum of 36 mg.

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Number of subjects in period 1	GTX-102 Cohorts 1-3
Started	5
Completed	0
Not completed	5
Adverse event, non-fatal	5

Period 2

Period 2 title	Amended Dosing Period
Is this the baseline period?	Yes ^[1]
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
------------------------------	----

Arm title	GTX-102 US Redosing Cohorts 1-2
------------------	---------------------------------

Arm description:

Participants from Cohorts 1-2 were restarted at doses ranging from 5 to 10 mg followed by dose escalation up to a maximum dose of 14 mg every 3 months (Q3M).

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Arm title	GTX-102 Cohorts 4-7
------------------	---------------------

Arm description:

Participants received up to 4 loading doses ranging from 3.3 to 10 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Arm title	GTX-102 Cohorts A&B
------------------	---------------------

Arm description:

Participants received up to 4 loading doses of 7.5 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Arm title	GTX-102 Cohorts C&D
------------------	---------------------

Arm description:

Participants received up to 4 loading doses ranging from 5 to 7.5 mg followed by dose escalation up to a maximum dose of 10 mg Q3M.

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Arm title	GTX-102 US 2 mg/Cohort E
------------------	--------------------------

Arm description:

Participants received either no treatment or GTX-102. Participants treated with GTX-102 received 4 monthly loading doses of 2 mg, followed by 2 mg Q3M. Participants who received no treatment during the initial period then received 4 monthly doses of 2 mg, followed by 2 mg Q3M. All participants then transitioned to Cohort E regardless of prior GTX-102 treatment duration and received up to 4 loading doses of 5 to 7.5 mg, followed by 7.5 mg every 2 months (Q2M).

Arm type	Experimental
Investigational medicinal product name	GTX-102
Investigational medicinal product code	GTX-102
Other name	apazunursen
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

GTX-102 is given through an intrathecal injection via lumbar puncture.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 2 (Amended Dosing Period) is the Baseline Period.

Number of subjects in period 2	GTX-102 US Redosing Cohorts 1-2	GTX-102 Cohorts 4-7	GTX-102 Cohorts A&B
Started	4	15	34

Baseline characteristics

Reporting groups^[1]

Reporting group title	GTX-102 US Redosing Cohorts 1-2
Reporting group description:	
Participants from Cohorts 1-2 were restarted at doses ranging from 5 to 10 mg followed by dose escalation up to a maximum dose of 14 mg every 3 months (Q3M).	
Reporting group title	GTX-102 Cohorts 4-7
Reporting group description:	
Participants received up to 4 loading doses ranging from 3.3 to 10 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.	
Reporting group title	GTX-102 Cohorts A&B
Reporting group description:	
Participants received up to 4 loading doses of 7.5 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.	
Reporting group title	GTX-102 Cohorts C&D
Reporting group description:	
Participants received up to 4 loading doses ranging from 5 to 7.5 mg followed by dose escalation up to a maximum dose of 10 mg Q3M.	
Reporting group title	GTX-102 US 2 mg/Cohort E
Reporting group description:	
Participants received either no treatment or GTX-102. Participants treated with GTX-102 received 4 monthly loading doses of 2 mg, followed by 2 mg Q3M. Participants who received no treatment during the initial period then received 4 monthly doses of 2 mg, followed by 2 mg Q3M. All participants then transitioned to Cohort E regardless of prior GTX-102 treatment duration and received up to 4 loading doses of 5 to 7.5 mg, followed by 7.5 mg every 2 months (Q2M).	

Notes:

[1] - The number of subjects reported to be in the baseline period is not equal to the worldwide number of subjects enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 74 participants were enrolled. The US Redosing Cohort 1-2 participants (in Amended Dosing Period) are a subset of the Cohorts 1-3 participants (Original Dosing Period), in which 4 of the 5 participants were re-enrolled. Baseline characteristics details for Cohorts 1-3 (Original Dosing Period) are presented under the Subject Analysis Sets list. (Empty fields are not applicable for this section, and can be ignored.)

Primary: Number of Participants with Treatment-emergent Adverse Events (TEAEs), Serious TEAEs (SAEs), Adverse Events of Special Interest (AESIs), TEAEs Leading to Discontinuation and TEAEs by Severity

End point title	Number of Participants with Treatment-emergent Adverse Events (TEAEs), Serious TEAEs (SAEs), Adverse Events of Special Interest (AESIs), TEAEs Leading to Discontinuation and TEAEs by Severity ^[1]
-----------------	--

End point description:

An adverse event (AE) is defined as any untoward medical occurrence associated with the use of a drug in humans, whether or not considered drug related. A TEAE is defined as any AE not present prior to the initiation of the drug treatment or any AE already present that worsens in either intensity or frequency following exposure to the drug treatment. An SAE is an AE that meets any of the following criteria in the view of either the Investigator or Ultragenyx: death; life-threatening; inpatient hospitalization or prolongation of existing hospitalization; disability/incapacity; congenital anomaly/birth defect not present at screening; other important medical events. Severity of events were graded as mild (grade 1), moderate (grade 2), severe (grade 3), life-threatening (grade 4), or death (grade 5). An AESI is an event of scientific or medical interest specific to the drug treatment requiring further investigation and close monitoring to further characterize them.

End point type	Primary
----------------	---------

End point timeframe:

From the first dose of study drug through last dose of study drug plus 42 ($\pm$ 14) days. Overall mean duration was 382.0 days for Cohorts 1-3 and was 586.2 days for all other cohorts.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics are presented per protocol.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From signing of informed consent (SAEs) or first dose of study drug (non-serious AEs) through last dose of study drug plus 42 ($\pm$ 14) days. Overall mean duration was 382.0 days for Cohorts 1-3 and was 586.2 days for all other cohorts.

Assessment type	Systematic

Reporting groups

Reporting group title	GTX-102 Cohorts 1 - 3
-----------------------	-----------------------

Reporting group description:

Participants received doses ranging from 3.3 to 20 mg followed by dose escalation up to a maximum of 36 mg.

Reporting group title	GTX-102 US Redosing Cohorts 1 - 2
-----------------------	-----------------------------------

Reporting group description:

Participants from Cohorts 1-2 were restarted at doses ranging from 5 to 10 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.

Reporting group title	GTX-102 Cohorts 4 - 7
-----------------------	-----------------------

Reporting group description:

Participants received up to 4 loading doses ranging from 3.3 to 10 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.

Reporting group title	GTX-102 Cohorts A & B
-----------------------	-----------------------

Reporting group description:

Participants received up to 4 loading doses of 7.5 mg followed by dose escalation up to a maximum dose of 14 mg Q3M.

Reporting group title	GTX-102 Cohorts C & D
-----------------------	-----------------------

Reporting group description:

Participants received up to 4 loading doses ranging from 5 to 7.5 mg followed by dose escalation up to a maximum dose of 10 mg Q3M.

Reporting group title	GTX-102 US 2 mg/Cohort E
-----------------------	--------------------------

Reporting group description:

Participants received either no treatment or GTX-102. Participants treated with GTX-102 received 4 monthly loading doses of 2 mg, followed by 2 mg Q3M. Participants who received no treatment during the initial period then received 4 monthly doses of 2 mg, followed by 2 mg Q3M. All participants then transitioned to Cohort E regardless of prior GTX-102 treatment duration and received up to 4 loading doses of 5 to 7.5 mg, followed by 7.5 mg every 2 months (Q2M).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 December 2019	*Changed number of patients treated by cohort *Medical monitor review of safety data prior to dose escalation within dose cohort *Change to DSMB requirements *Updated number of patients per cohort *Added new exclusion criteria *Open label extension will be conducted under a separate protocol, clarification that patients may remain on study without treatment until initiation of OLE *Added details on anesthesia use *Added details related to LP procedure *Eliminated obtaining weights every 2 weeks *Changed inflammatory marker to be analyzed.
01 May 2020	*LPs allowed without anesthesia *Added inclusion criteria *Given COVID-19 pandemic; allow EEG to be obtained outside in-patient hospital setting, allow safety visits via video conference/telemedicine and home visits from visiting nurses or health care provider *Added blood and urine collection for other biomarkers *Changed time of ECG for patient convenience *Changed time of neurological exam *Specified time limit on duration of AEs that require discontinuation from study *Updated management of thrombocytopenia and proteinuria.
29 July 2022	*Change of sponsor from GeneTx to Ultragenyx *Removed specificity of UK and Canada *Adjusted efficacy measures
13 March 2023	*Removed Dose-selection Cohorts 8-12 *Expansion Cohorts A and B updates to loading and maintenance period *Dose-selection Cohorts 4-7 maintenance dosing modified *Dexamethasone premedication required for loading doses *Radiculopathy defined as AESI *Contraception guidance added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
20 July 2020	The Sponsor suspended dosing and enrollment into the study according to the protocol-defined dose stopping criteria after the first patient experienced the related SAE of radiculopathy. On 03 November 2020, the FDA placed the study on a Full Clinical Hold. The Sponsor engaged with the Agency to review data and discuss changes to the study design.	24 September 2021

Notes:

Limitations and caveats

None reported
