

## Clinical trial results:

**Assessment of the immunogenicity and safety of marketed vaccines for COVID-19 after regular schedule and adapted vaccine schedules and routes: BNT162b2 (Comirnaty®; Pfizer-BioNTech), mRNA-1273 Vaccine (COVID-19 Vaccine Moderna®; Moderna) and COVID-19 Vaccine (ChAdOx1-S [recombinant])(Vaxzevria®, AstraZeneca)**

### Summary

EudraCT number	2021-001993-52
Trial protocol	BE
Global end of trial date	08 July 2022

### Results information

Result version number	v1 (current)
This version publication date	05 July 2025
First version publication date	05 July 2025

### Trial information

#### Trial identification

Sponsor protocol code	IMCOVAS
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	University of Antwerp
Sponsor organisation address	Prinsstraat 13, Antwerp, Belgium, 2000
Public contact	Centre for the Evaluation of Vaccination, University of Antwerp, +32 032652565, cev@uantwerpen.be
Scientific contact	Centre for the Evaluation of Vaccination, University of Antwerp, +32 032652565, cev@uantwerpen.be

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 July 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 July 2022
Global end of trial reached?	Yes
Global end of trial date	08 July 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the trial is to assess non-inferiority of the humoral immune response against SARS-Cov-2 infection of different vaccines and adapted vaccine schedules in comparison with the reference schedule, at 28 days post second study vaccine.

Protection of trial subjects:

The study is conducted in accordance with the required ethical principles, including the Declaration of Helsinki and Good Clinical Practice and compliant applicable laws and regulations, including the General Data Protection Regulation to protect confidentiality.

Subjects are protected to the risks associated to vaccination and blood draw by having procedures done by trained medical personnel and remaining under medical observation during at least 30 minutes after vaccination. Subjects with severe allergic reactions to vaccine components or anaphylaxis in the past are excluded to mitigate the risk of anaphylaxis. Diary cards are used to collect solicited and unsolicited adverse events after vaccination. Investigators will timely and accurate monitor the safety after vaccination and holding rules are defined in advance.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 May 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 566
Worldwide total number of subjects	566
EEA total number of subjects	566

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	566
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Volunteers were recruited in four study centres across Belgium. Participant recruitment started on 26th of May 2021. The final participant was included on 24th of June 2021.

### Pre-assignment

Screening details:

A total of 580 participants were screened for inclusion into the trial. A total of 14 individuals were deemed ineligible to participate in the IMCOVAS trial. Of this group, 8 failed to meet the inclusion criteria while 7 met one of the exclusion criteria. Therefore a total of 566 participants were enrolled into the trial.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind <sup>[1]</sup>
Roles blinded	Subject, Assessor

Blinding implementation details:

The trial is partially single blind. Subjects and study personnel, not involved in vaccine administration, are not informed about the brand and dose of the 1st & 2nd study vaccination, until 14 days after the 2nd vaccination, when the reporting period of adverse events is finished. For the intradermal administration and long-interval randomization groups, the subjects and personnel will know the brand of the vaccine, due the trial design nature.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Group 1A: Pfizer regular scheme

Arm description:

Subjects received a standard dose of BNT162b2 followed by a standard dose of BNT162b2 administered intramuscularly 28 days apart, as foreseen per the standard dosing scheme.

Arm type	Active comparator
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one dose of 0.3mL BNT162b2 (30 micrograms of COVID-19 mRNA Vaccine) intramuscular on Day 0 and Day 28.

<b>Arm title</b>	Group 1B: Pfizer - Moderna scheme
------------------	-----------------------------------

Arm description:

Subjects received a standard dose BNT162b2 followed by a standard dose mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Arm type	Experimental
Investigational medicinal product name	mRNA-1273
Investigational medicinal product code	
Other name	Spikevax
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one dose of 0.5mL mRNA-1273 (100 microgram mRNA) intramuscular on Day 28.

Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
Subjects received one dose of 0.3mL BNT162b2 (30 micrograms of COVID-19 mRNA Vaccine) intramuscular on Day 0.	
<b>Arm title</b>	Group 1 C: Pfizer-AstraZeneca scheme
Arm description:	
Subjects received a standard dose of BNT162b2 followed by a standard dose of COVID-19 Vaccine (ChAdOx1-S [recombinant]) administered intramuscularly 28 days apart.	
Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
Subjects received one dose of 0.3mL BNT162b2 (30 micrograms of COVID-19 mRNA Vaccine) intramuscular on Day 0.	
Investigational medicinal product name	COVID-19 Vaccine (ChAdOx1-S [recombinant])
Investigational medicinal product code	
Other name	Vaxzevria
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
Subjects received one dose of COVID-19 Vaccine (ChAdOx1-S [recombinant]) (0.5mL Vaxzevria, (not less than $2.5 \times 10^8$ infectious units (Inf.U) Chimpanzee Adenovirus encoding the SARS-CoV-2 Spike glycoprotein (ChAdOx1-S)) intramuscular on Day 28.	
<b>Arm title</b>	Group 1D: Pfizer low dose scheme
Arm description:	
Subjects received a low dose of BNT162b2 followed by a low dose of BNT162b2 administered intramuscularly 28 days apart.	
Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
Subjects received one dose of 0.2 mL BNT162b2 (20 micrograms of COVID-19 mRNA Vaccine) intramuscular on Day 0 and Day 28.	
<b>Arm title</b>	Group 1E: Pfizer long interval scheme
Arm description:	
Subjects received a standard dose of BNT162b2 followed by a standard dose of BNT162b2 administered intramuscularly 12 weeks apart.	
Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received one dose of 0.3mL BNT162b2 (30 micrograms of COVID-19 mRNA Vaccine) intramuscular on Day 0 and Day 84.

<b>Arm title</b>	Group 1F: Pfizer intradermal scheme
------------------	-------------------------------------

**Arm description:**

Subjects received BNT162b2 followed by BNT162b2 administered intradermal 28 days apart.

Arm type	Experimental
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	
Other name	Comirnaty
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intradermal use

**Dosage and administration details:**

Subjects received one dose of 0.06 mL BNT162b2 (6 micrograms of COVID-19 mRNA Vaccine) intradermal on Day 0 and Day 28.

<b>Arm title</b>	Group 3A: Moderna regular scheme
------------------	----------------------------------

**Arm description:**

Subjects received a standard dose of mRNA-1273, followed by a standard dose of mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Arm type	Active comparator
Investigational medicinal product name	mRNA-1273
Investigational medicinal product code	
Other name	Spikevax
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received one dose of 0.5mL mRNA-1273 (100 microgram mRNA) intramuscular on Day 0 and Day 28.

<b>Arm title</b>	Group 3B: Moderna low dose scheme
------------------	-----------------------------------

**Arm description:**

Subjects received a low dose of mRNA-1273, followed by a low dose of mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Arm type	Experimental
Investigational medicinal product name	mRNA-1273
Investigational medicinal product code	
Other name	Spikevax
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received one dose of 0.25mL mRNA-1273 (50 microgram mRNA) intramuscular on Day 0 and Day 28.

**Notes:**

[1] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: The trial is partially single blind. Subjects and study personnel, not involved in vaccine administration, are not informed about the brand and dose of the 1st & 2nd study vaccination, until 14 days after the 2nd vaccination, when the reporting period of adverse events is finished. For the intradermal administration and long-interval randomization groups, the subjects and personnel will know the brand of the vaccine, due the trial design nature.

### Primary: Geometric mean titer of antibodies binding to the Receptor Binding Domain of SARS-CoV-2 S protein of the ancestral D614 SARS-CoV-2 virus strain 28days post second study vaccination

End point title	Geometric mean titer of antibodies binding to the Receptor Binding Domain of SARS-CoV-2 S protein of the ancestral D614 SARS-CoV-2 virus strain 28days post second study vaccination
End point description: Primary endpoint analyses are performed on a modified Intention-To-Treat population (mITT). This mITT comprises of eligible participants who were still in the study at the primary endpoint visit, seronegative for COVID-19 at baseline, received both study vaccines, did not receive a vaccine outside the study 14 days after each study vaccination, did not receive a COVID-19 vaccine outside the study, and had not been identified with a COVID-19 infection before or on the primary endpoint evaluation visit.  Antibody responses at baseline and after vaccination were assessed using an enzyme-linked immunosorbent assay (ELISA) for the quantitative detection of IgG-class antibodies to Receptor Binding Domain (RBD). The GMT outcome measure is used to assess the non-inferiority of the humoral immune response against SARS-CoV-2 infection of different vaccines and adapted vaccine schedules in comparison with the reference schedule, after 2 vaccine doses.

## Secondary: Geometric mean titer of antibodies binding to the Receptor Binding Domain of SARS-CoV-2 S protein of the ancestral D614 SARS-CoV-2 virus strain 28 days post third study vaccination

End point title	Geometric mean titer of antibodies binding to the Receptor Binding Domain of SARS-CoV-2 S protein of the ancestral D614 SARS-CoV-2 virus strain 28 days post third study vaccination
-----------------	--

End point description:

This non-inferiority analysis is performed on the mITT population, which includes participants who received three COVID-19 vaccines as per study protocol, did not experience a breakthrough infection, and did not receive a COVID-19 vaccine outside of the study (n=271). Therefore, this analysis investigates the pure vaccine effect 28 days after the third COVID-19 vaccine.

Antibody responses at baseline and after vaccination were assessed using an enzyme-linked immunosorbent assay (ELISA) for the quantitative detection of IgG-class antibodies to Receptor Binding Domain (RBD). The GMT outcome measures is used to assess the non-inferiority of the humoral immune response against SARS-Cov-2 infection of different vaccines and adapted vaccine schedules in comparison with the reference schedule, after 3 vaccine doses.

lower limit	0.42

Notes:

[33] - For the Pfizer comparisons a p-value <0.005 implies non-inferiority

<b>Statistical analysis title</b>	GMT ratio for group 1f
Statistical analysis description: Demonstrate non-inferiority of adapted schedule 1F compared to reference schedule 1A in nAB Delta NT50 at 28 days post third vaccine.	
Comparison groups	Group 1A: Pfizer regular scheme v Group 1F: Pfizer intradermal scheme
Number of subjects included in analysis	33
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	= 0.03962 <sup>[34]</sup>
Method	Mixed models analysis
Parameter estimate	GMT ratio
Point estimate	1.03
Confidence interval	
level	Other: 97.5 %
sides	1-sided
lower limit	0.5

Notes:

[34] - For the Pfizer comparisons a p-value <0.005 implies non-inferiority

<b>Statistical analysis title</b>	GMT ratio for group 3b
Statistical analysis description: Demonstrate non-inferiority of adapted schedule 3B compared to reference schedule 3A in nAB Delta NT50 at 28 days post third vaccine.	
Comparison groups	Group 3A: Moderna regular scheme v Group 3B: Moderna low dose scheme

Number of subjects included in analysis	41
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	= 0.48837 <sup>[35]</sup>
Method	Mixed models analysis
Parameter estimate	GMT ratio
Point estimate	0.64
Confidence interval	
level	Other: 97.5 %
sides	1-sided
lower limit	0.38

Notes:

[35] - For the Moderna comparison a p-value < 0.025 implies non-inferiority

## Secondary: Number of participants with at least one solicited local adverse events

End point title	Number of participants with at least one solicited local adverse events
-----------------	---

End point description:

The number of participants in the modified Intention-To-Treat population who reported at least one solicited local adverse event are reported. Following solicited local adverse events were surveyed among the participants through a diary: injection site erythema, injection site induration, injection site pain tenderness and injection site swelling.

End point type	Secondary
----------------	-----------

End point timeframe:

14 days after first and second vaccination

End point values	Group 1A: Pfizer regular scheme	Group 1B: Pfizer - Moderna scheme	Group 1 C: Pfizer- AstraZeneca scheme	Group 1D: Pfizer low dose scheme

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Solicited AEs: from time of vaccination until 5 days post-study-vaccination for 1st and 2nd vaccination.

Unsolicited AEs: from time of vaccination until 14 days post-study-vaccination for 1st and 2nd vaccination.

SAE, AESI and MAAE: entire study period

Assessment type	Systematic

### Reporting groups

Reporting group title	Group 1A: Pfizer regular scheme
-----------------------	---------------------------------

Reporting group description:

Subjects received a standard dose of BNT162b2 followed by a standard dose of BNT162b2 administered intramuscularly 28 days apart, as foreseen per the standard dosing scheme.

Reporting group title	Group 1B: Pfizer - Moderna scheme
-----------------------	-----------------------------------

Reporting group description:

Subjects received a standard dose BNT162b2 followed by a standard dose mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Reporting group title	Group 1 C: Pfizer-AstraZeneca scheme
-----------------------	--------------------------------------

Reporting group description:

Subjects received a standard dose of BNT162b2 followed by a standard dose of COVID-19 Vaccine (ChAdOx1-S [recombinant]) administered intramuscularly 28 days apart.

Reporting group title	Group 1D: Pfizer low dose scheme
-----------------------	----------------------------------

Reporting group description:

Subjects received a low dose of BNT162b2 followed by a low dose of BNT162b2 administered intramuscularly 28 days apart.

Reporting group title	Group 1E: Pfizer long interval scheme
-----------------------	---------------------------------------

Reporting group description:

Subjects received a standard dose of BNT162b2 followed by a standard dose of BNT162b2 administered intramuscularly 12 weeks apart.

Reporting group title	Group 1F: Pfizer intradermal scheme
-----------------------	-------------------------------------

Reporting group description:

Subjects received BNT162b2 followed by BNT162b2 administered intradermal 28 days apart.

Reporting group title	Group 3A: Moderna regular scheme
-----------------------	----------------------------------

Reporting group description:

Subjects received a standard dose of mRNA-1273, followed by a standard dose of mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Reporting group title	Group 3B: Moderna low dose scheme
-----------------------	-----------------------------------

Reporting group description:

Subjects received a low dose of mRNA-1273, followed by a low dose of mRNA-1273 Vaccine administered intramuscularly 28 days apart.

Non-serious adverse events	Group 3A: Moderna regular scheme	Group 3B: Moderna low dose scheme	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	69 / 70 (98.57%)	73 / 73 (100.00%)	
Nervous system disorders			
Dizziness			
alternative assessment type: Non-systematic			
subjects affected / exposed	2 / 70 (2.86%)	4 / 73 (5.48%)	
occurrences (all)	2	5	
Headache			
subjects affected / exposed	44 / 70 (62.86%)	46 / 73 (63.01%)	
occurrences (all)	70	73	

General disorders and administration site conditions			
Axillary pain			
alternative assessment type: Non-systematic			
subjects affected / exposed	2 / 70 (2.86%)	4 / 73 (5.48%)	
occurrences (all)	2	4	
Chest pain			
alternative assessment type: Non-systematic			
subjects affected / exposed	6 / 70 (8.57%)	5 / 73 (6.85%)	
occurrences (all)	6	9	
Chills			
subjects affected / exposed	34 / 70 (48.57%)	26 / 73 (35.62%)	
occurrences (all)	36	26	
Fatigue			
subjects affected / exposed	51 / 70 (72.86%)	53 / 73 (72.60%)	
occurrences (all)	89	85	
Injection Site Bruising			
alternative assessment type: Non-systematic			
subjects affected / exposed	1 / 70 (1.43%)	0 / 73 (0.00%)	
occurrences (all)	1	0	
Injection site discolouration			
alternative assessment type: Non-systematic			
subjects affected / exposed	0 / 70 (0.00%)	0 / 73 (0.00%)	
occurrences (all)	0	0	
Injection site discomfort			
subjects affected / exposed	28 / 70 (40.00%)	35 / 73 (47.95%)	
occurrences (all)	47	52	
Injection site erythema			
subjects affected / exposed	21 / 70 (30.00%)	17 / 73 (23.29%)	
occurrences (all)	34	18	
Injection site haemorrhage			
alternative assessment type: Non-systematic			
subjects affected / exposed	3 / 70 (4.29%)	3 / 73 (4.11%)	
occurrences (all)	4	3	
Injection site induration			

subjects affected / exposed	22 / 70 (31.43%)	19 / 73 (26.03%)	
occurrences (all)	30	23	
Injection site movement impairment alternative assessment type: Non-systematic			
subjects affected / exposed	5 / 70 (7.14%)	6 / 73 (8.22%)	
occurrences (all)	5	6	
Inejction site pain			
subjects affected / exposed	67 / 70 (95.71%)	71 / 73 (97.26%)	
occurrences (all)	133	120	
Injection site pruritus alternative assessment type: Non-systematic			
subjects affected / exposed	6 / 70 (8.57%)	5 / 73 (6.85%)	
occurrences (all)	6	6	
Injection site swelling			
subjects affected / exposed	15 / 70 (21.43%)	13 / 73 (17.81%)	
occurrences (all)	18	16	
Injection site warmth alternative assessment type: Non-systematic			
subjects affected / exposed	4 / 70 (5.71%)	2 / 73 (2.74%)	
occurrences (all)	6	2	
Malaise			
subjects affected / exposed	36 / 70 (51.43%)	38 / 73 (52.05%)	
occurrences (all)	39	40	
Pyrexia			
subjects affected / exposed	22 / 70 (31.43%)	9 / 73 (12.33%)	
occurrences (all)	22	9	
Gastrointestinal disorders			
Abdominal pain alternative assessment type: Non-systematic			
subjects affected / exposed	3 / 70 (4.29%)	6 / 73 (8.22%)	
occurrences (all)	3	7	
Diarrhoea alternative assessment type: Non-systematic			
subjects affected / exposed	3 / 70 (4.29%)	3 / 73 (4.11%)	
occurrences (all)	3	3	

Nausea subjects affected / exposed occurrences (all)	24 / 70 (34.29%) 27	24 / 73 (32.88%) 27	
Vomiting subjects affected / exposed occurrences (all)	4 / 70 (5.71%) 4	1 / 73 (1.37%) 1	
Respiratory, thoracic and mediastinal disorders Cough alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	0 / 70 (0.00%) 0	3 / 73 (4.11%) 3	
Dyspnoea subjects affected / exposed occurrences (all)	3 / 70 (4.29%) 3	6 / 73 (8.22%) 7	
Oropharyngeal pain alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	3 / 70 (4.29%) 4	3 / 73 (4.11%) 3	
Skin and subcutaneous tissue disorders Eczema alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	0 / 70 (0.00%) 0	3 / 73 (4.11%) 4	
Pruritus alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	1 / 70 (1.43%) 1	0 / 73 (0.00%) 0	
Skin hyperpigmentation alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	0 / 70 (0.00%) 0	0 / 73 (0.00%) 0	
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	22 / 70 (31.43%) 25	17 / 73 (23.29%) 20	

Back pain alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	2 / 70 (2.86%) 2	0 / 73 (0.00%) 0	
Myalgia subjects affected / exposed occurrences (all)	36 / 70 (51.43%) 46	31 / 73 (42.47%) 35	
Infections and infestations COVID-19 alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	40 / 70 (57.14%) 40	40 / 73 (54.79%) 41	
Nasopharyngitis alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	7 / 70 (10.00%) 7	3 / 73 (4.11%) 3	
Pharyngitis alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	2 / 70 (2.86%) 3	0 / 73 (0.00%) 0	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 June 2021	Removal of groups 2a, 2b, 2c and 2d, due to the accelerated national vaccination campaign and age limitations for these study groups. No participants were recruited at that time in those study groups. Removal of age and gender stratification.
23 December 2021	Allow the participants to receive a COVID-19 vaccine outside of the trial, during the national vaccination campaign for a third COVID-19 vaccine dose. Addition of an ad hoc post 3rd COVID-19 vaccine dose visit.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
