

Clinical trial results:

Pharmacokinetic study with a loading dose of clofazimine in adult patients with nontuberculous mycobacterial disease

Summary

EudraCT number	2021-002062-40
Trial protocol	NL
Global end of trial date	31 August 2023

Results information

Result version number	v1 (current)
This version publication date	14 September 2024
First version publication date	14 September 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 August 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2023
Global end of trial reached?	Yes
Global end of trial date	31 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overarching aim of this study is to contribute to dose optimization of CFZ in the treatment of NTM diseases.

The primary objective of this study is to describe the PK of CFZ, after 4 weeks of treatment with a loading dose regimen of 300 mg once daily, in adult patients with NTM disease.

Protection of trial subjects:

Written informed consent is to be obtained from all subjects prior to any trial procedures being performed. Investigators may discuss the availability of the trial and the opportunity for entry with a potential patient without first obtaining consent. The patients are informed about the study by a letter (PIF) before their first appointment and will be seen by a physician. The investigators have both ethical and legal responsibility to ensure that each patient being considered for inclusion in this trial is given a full explanation of the protocol. This shall be documented on a written Informed Consent Form that shall be approved by the same METC responsible for approval of this protocol. The principal investigator or other study doctor asks for participation. Informed consent is given at least 24 hours later.

In case the medical doctor of the participant is also the investigator, it will be emphasized to the participant that participation in this study is strictly voluntary and that the decision on whether or not to participate will by no means influence the clinical care they will receive. Also, as described in the PIF, participants have the possibility to ask questions to an independent expert.

The investigator must assure that patients' anonymity will be strictly maintained and that their identities are protected from unauthorized parties. Only an identification code (i.e., not names) should be recorded on any form submitted to the IEC. The investigator must keep a screening log showing codes, for all patients screened and for all patients enrolled in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 April 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 12
Worldwide total number of subjects	12
EEA total number of subjects	12

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

All patients will be included at the Radboudumc center of expertise for mycobacterial diseases. Patients from all over the country are referred to the Radboudumc. Informed consent will be obtained at the Radboudumc. We will include all adult patients with NTM disease who are eligible for treatment with CFZ.

Pre-assignment

Screening details:

In order to be eligible to participate in this study, a subject must meet all of the following criteria:

- The participant is diagnosed with pulmonary or extrapulmonary NTM disease and is eligible for treatment with CFZ
- The participant is at least 18 years of age

Period 1

Period 1 title	CFZ dosing (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

not applicable

Arms

Are arms mutually exclusive?	No
------------------------------	----

Arm title	CFZ loading dose
------------------	------------------

Arm description:

300mg CFZ daily for 28 days

Arm type	Experimental
Investigational medicinal product name	clofazimine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

daily use of 3 tablets of 100mg for 28 days, followed by the 100mg daily dose for 14 weeks

Arm title	CFZ standard dose
------------------	-------------------

Arm description:

100mg CFZ daily for 14 weeks

Arm type	Active comparator
Investigational medicinal product name	clofazimine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

daily use of 3 tablets of 100mg for 28 days, followed by the 100mg daily dose for 14 weeks

Number of subjects in period 1	CFZ loading dose	CFZ standard dose
Started	12	12
Completed	12	8
Not completed	0	4
Adverse event, serious fatal	-	2
Consent withdrawn by subject	-	1
clinical deterioration	-	1

Baseline characteristics

Reporting groups

Reporting group title	CFZ dosing

Skin and subcutaneous tissue disorders			

skin-related subjects affected / exposed occurrences (all)	10 / 12 (83.33%) 20		
--	------------------------	--	--

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

no formal statistical test was done, in the statistical analysis section we reported the GM of Cmax and 95%CI of Cmax after the load dose.
--
