Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 December 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 December 2025
Global end of trial reached?	Yes
Global end of trial date	07 January 2026
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to investigate improvements in psychopathology in patients with schizophrenia spectrum disorders having an inflammatory blood profile randomized to either Celecoxib or placebo

Protection of trial subjects:

The safety, rights and well-being of subjects with schizophrenia are protected in accordance with the Declaration of Helsinki and ICH-GCP.

Written informed consent is obtained prior to any trial-related procedures. The capacity to provide informed consent is assessed by qualified study physicians; involvement of a legally authorised representative is ensured where required by national law.

Only clinically stable patients are included. Subjects with acute psychotic exacerbation or other conditions that may compromise safety or compliance are excluded.

To minimise distress, study visits are aligned with routine psychiatric care whenever possible and conducted by trained staff experienced in the treatment of patients with severe mental disorders. The number and invasiveness of procedures are limited to the minimum necessary.

Subjects are regularly monitored for psychiatric symptoms, suicidality and treatment-emergent adverse events. Any deterioration in mental status leads to immediate clinical evaluation and, if required, discontinuation of the investigational medicinal product and initiation of appropriate medical care.

All adverse events are documented, assessed and reported according to regulatory requirements. A predefined risk management and emergency procedure is in place.

Confidentiality is ensured through pseudonymisation and restricted access to data. Subjects may withdraw consent at any time without disadvantage for further medical care. The protocol and all subject-related documents were approved by an independent Ethics Committee prior to trial start.

Background therapy:

Standard of care

Evidence for comparator: -

Actual start date of recruitment	29 July 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 30
Worldwide total number of subjects	30
EEA total number of subjects	30

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	30
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The multicentre, randomized, double-blind, placebo-controlled, parallel group clinical trial was conducted in Germany at two sites. Between July 2022 and Nov. 2024 all pro-inflammatory patients were randomised in one of the two arms. A randomization did not take place until a final check conforms that all inclusion or no exclusion criteria applied.

Pre-assignment

Screening details:

Pre-screening was conducted. Approximately 199 patients with schizophrenia spectrum disorders were planned for screening, including cytokine profiling and somatic exclusion. Patients with an inflamed profile (n=109 planned) are randomized to add-on Celecoxib or placebo. Screening (Day -21 to -1) followed written informed consent.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

Study medication (Celecoxib or placebo) is identical in appearance and centrally labelled and dispensed by the pharmacy according to the randomization list. Treatment allocation is concealed from participants, investigators and study staff. Emergency unblinding is permitted only if medically required.

Arms

Are arms mutually exclusive?	Yes
Arm title	Inflamed Patients - Add-on Celecoxib

Arm description:

Patients with schizophrenia spectrum disorders and a confirmed pro-inflammatory cytokine profile receive for 8 weeks (56 days) add-on Celecoxib in addition to standard antipsychotic treatment.

Arm type	Active comparator
Investigational medicinal product name	Celecoxib
Investigational medicinal product code	SUB01143MIG
Other name	CAS number 169590-42-5,
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Celecoxib is administered orally at a total daily dose of 400 mg, given as 200 mg twice daily (morning and evening before meals) for 8 weeks (56 days).

Arm title	Inflamed Patients - Add-on Placebo
------------------	------------------------------------

Arm description:

Patients with schizophrenia spectrum disorders and a confirmed pro-inflammatory ("inflamed") cytokine profile receive add-on placebo in addition to stable standard antipsychotic treatment. Placebo is administered orally twice daily (morning and evening before meals) for 8 weeks (56 days) in a schedule identical to Celecoxib.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo is administered orally twice daily (morning and evening before meals) for 8 weeks (56 days), following a schedule identical to the active treatment arm.

Number of subjects in period 1	Inflamed Patients - Add-on Celecoxib	Inflamed Patients - Add-on Placebo
Started	15	15
Completed	12	13
Not completed	3	2
incompliance to IMP intake	3	2

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are assessed and recorded at each study visit from first administration of the investigational medicinal product until the end-of-treatment visit (Day 56 \pm 7 days).

Adverse event reporting additional description:

Planned hospitalizations (pre-existing conditions or protocol-required procedures without serious deterioration), admissions for social reasons, and surgeries planned before trial entry are not considered SAEs. Re-hospitalization between V3 and V5 for psychiatric reasons is also not classified as an SAE.

Assessment type	Systematic

Reporting groups

Reporting group title	Overall Study
-----------------------	---------------

Reporting group description:

The safety set consisted of all patients who entered the trial and was used for conducting all safety analyses.

Serious adverse events	Overall Study		
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 30 (3.33%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Psychiatric disorders			
Schizoaffective disorder			
alternative dictionary used: MedDRA 27.1			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Overall Study		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	16 / 30 (53.33%)		
Investigations			
Weight increased			

subjects affected / exposed occurrences (all)	4 / 30 (13.33%) 4		
Nervous system disorders Dizziness subjects affected / exposed occurrences (all)	2 / 30 (6.67%) 2		
Gastrointestinal disorders Abdominal pain upper subjects affected / exposed occurrences (all) Dyspepsia subjects affected / exposed occurrences (all) Nausea subjects affected / exposed occurrences (all)	2 / 30 (6.67%) 2 2 / 30 (6.67%) 2 2 / 30 (6.67%) 2		
Psychiatric disorders Depression subjects affected / exposed occurrences (all) Restlessness subjects affected / exposed occurrences (all)	2 / 30 (6.67%) 2 2 / 30 (6.67%) 2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 September 2023	The following major changes were included in AM 1: The CSP was adapted due to further development of the algorithm for differentiation between inflamed/non-inflamed patients; change of investigator at trial site #2.
11 December 2024	The following major changes were included in AM 2: Deletion of follow-up visits (V4 and V5) post intervention.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
