

Clinical trial results:

A randomized, double-blind, placebo-controlled, multi-center, dose-ranging Phase 2 study of rilzabrutinib followed by an open-label extension phase in patients with moderate-to-severe chronic spontaneous urticaria (CSU) who remain symptomatic despite the use of H1 antihistamine treatment

Summary

EudraCT number	2021-002609-93
Trial protocol	ES DE IT PL GR NL

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 July 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 April 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of rilzabrutinib in study participants with CSU who remained symptomatic despite the use of H1-antihistamine (H1-AH).

Protection of trial subjects:

Participants were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the participant and considering the local culture. During the course of the trial, participants were provided with individual participant cards indicating the nature of the trial the participant is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 32
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	Chile: 16
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Greece: 5
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Japan: 10
Country: Number of subjects enrolled	Korea, Republic of: 12

Country: Number of subjects enrolled	Spain: 14
Country: Number of subjects enrolled	Taiwan: 13
Worldwide total number of subjects	160
EEA total number of subjects	57

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	151
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 59 active centers in 13 countries. A total of 240 participants were screened between 24 November 2021 and 28 February 2023, of which 80 were screen failures. Screen failures were mainly due to not meeting the eligibility criteria.

Pre-assignment

Screening details:

A total of 160 participants were enrolled in the study. Randomization was stratified by region and prior use of omalizumab. Here reasons for not completed indicates reasons for treatment discontinuation.

Period 1

Period 1 title	Double-Blind Period (Up to 12 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	DB Period: Placebo TID

Arm description:

Participants received 1 tablet of matching placebo orally three times a day (TID) from Day 1 to Week 12 during the double-blind (DB) period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to rilzabrutinib was available as tablets (modified-capsule shaped tablets/caplets) and 1 tablet were administered orally TID from Day 1 to Week 12.

Arm title	DB Period: Rilzabrutinib 400 mg QPM + Placebo
------------------	---

Arm description:

Participants received 1 tablet of rilzabrutinib 400 milligrams (mg) orally once every evening (QPM) and 2 tablets of matching placebo daily from Day 1 to Week 12 during the DB period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to rilzabrutinib was available as tablets (modified-capsule shaped tablets/caplets) and 2 tablets were administered orally twice daily from Day 1 to Week 12.

Investigational medicinal product name	Rilzabrutinib
Investigational medicinal product code	
Other name	SAR444671, PRN1008
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilzabrutinib was available as 400 mg tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally QPM from Day 1 to Week 12.

Arm title	DB Period: Rilzabrutinib 400 mg BID + Placebo
------------------	---

Arm description:

Participants received 1 tablet of rilzabrutinib 400 mg orally twice a day (BID) and 1 tablet of matching placebo daily from Day 1 to Week 12 during the DB period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to rilzabrutinib was available as tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally once daily from Day 1 to Week 12.

Investigational medicinal product name	Rilzabrutinib
Investigational medicinal product code	
Other name	SAR444671, PRN1008
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilzabrutinib was available as 400 mg tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally BID from Day 1 to Week 12.

Arm title	DB Period: Rilzabrutinib 400 mg TID
------------------	-------------------------------------

Arm description:

Participants received 1 tablet of rilzabrutinib 400 mg orally TID from Day 1 to Week 12 during the DB period.

Arm type	Experimental
Investigational medicinal product name	Rilzabrutinib
Investigational medicinal product code	
Other name	SAR444671, PRN1008
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilzabrutinib was available as 400 mg tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally TID from Day 1 to Week 12.

Period 2

Period 2 title	OLE Period (Weeks 13 to 52: 40 Weeks)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	OLE Period: Rilzabrutinib 400 mg BID

Arm description:

Participants who completed DB period entered the open-label extension (OLE) period received 1 tablet of rilzabrutinib 400 mg orally BID from Week 13 to Week 52.

Arm type	Experimental
Investigational medicinal product name	Rilzabrutinib
Investigational medicinal product code	
Other name	SAR444671, PRN1008
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilzabrutinib was available as 400 mg tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally BID from Week 13 to Week 52.

Arm title	OLE Period: Rilzabrutinib 400 mg TID
------------------	--------------------------------------

Arm description:

Participants who completed DB period entered the OLE period received 1 tablet of rilzabrutinib 400 mg orally TID from Week 13 to Week 52.

Arm type	Experimental
Investigational medicinal product name	Rilzabrutinib
Investigational medicinal product code	
Other name	SAR444671, PRN1008
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilzabrutinib was available as 400 mg tablets (modified-capsule shaped tablets/caplets) and 1 tablet was administered orally TID from Week 13 to Week 52.

Number of subjects in period 2^[1]	OLE Period: Rilzabrutinib 400 mg BID	OLE Period: Rilzabrutinib 400 mg TID
Started	9	128
Completed	6	98
Not completed	3	30
Consent withdrawn by subject	3	17
Adverse event, non-fatal	-	7
Unspecified	-	3
Poor compliance to protocol	-	1
Lack of efficacy	-	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Post completion of double-blinded period, only eligible participants entered open-label extension period.

Weekly Urticaria Activity Score (UAS7)			
The UAS7 score is a composite score containing both the hive severity score (HSS, ranging from 0 = None to 3 = more than 50 hives) and the itch severity score (ISS, ranging from 0 = None to 3 = intense). The daily UAS scores ranged from 0 to 6 points per day. Daily UAS scores were summed over a 7-day period to create the UAS7, ranging from 0 to 42, and are composed of the HSS7 and ISS7 components. A higher score indicates worse disease.			
Units: score on a scale			

arithmetic mean	30.0	31.4	30.2
standard deviation	± 8.6	± 7.3	± 7.2
Weekly Itch Severity Score (ISS7)			
The ISS represents the itch severity on a scale and was recorded by the participant in their electronic (e)-diary ranging from 0 (None) to 3 (intense). The ISS7 is the sum of ISS for the previous 7 days. The ISS7 represents itch severity on a scale ranging from 0 (minimum) to 21 (maximum). Higher scores indicate greater intensity of itch.			
Units: score on a scale

A higher score indicates worse disease. Here, score 0 indicates an absence of both itches and hives and a complete resolution of CSU symptoms. Omalizumab-naïve population consisted of all randomized omalizumab-naïve participants. Participants were analyzed according to the study treatment allocated by the randomization.

End point title	Number of Participants With Treatment-Emergent Adverse Events (TEAEs), Treatment-Emergent Serious Adverse Events (TESAEs), Treatment-Emergent Adverse Events of Special Interest (AESIs), and Withdrawals due to Treatment-Emergent Adverse Events
-----------------	--

End point description:

Adverse event (AE): any untoward medical occurrence in participant or clinical study participant, temporally associated with the use of study treatment, whether or not considered related to the study treatment. TEAEs: AEs that developed or worsened or became serious during TE period, defined as time from first administration of study treatment (on Day 1) to last administration of study treatment + 7 days. SAE: any AE, at any dose: resulted in death, was life-threatening, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, or was a medically important event. An AESI was an TEAE (serious or nonserious) of scientific and medical concern specific to Sponsor's product or program. Safety population consisted of all randomized participants who took at least 1 dose of study treatment. Participants were analyzed according to the treatment they actually received.

End point type	Secondary
End point timeframe: From first dose of study treatment (Day 1) up to last dose of study treatment + 7 days, approximately 13 weeks for DB period) and approximately 41 weeks for OLE period

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma Concentration of Rilzabrutinib

End point title	Plasma Concentration of Rilzabrutinib ^[1]
-----------------	--

End point description:

Plasma samples were collected at specified timepoints for evaluation of rilzabrutinib pharmacokinetic (PK) concentrations. PK population consisted of safety population without important deviation related to study treatment administration, and with at least 1 post-baseline PK sample with adequate documentation of dosing and sampling dates and times. Participants having received only placebo were not part of the PK population. Participants were analyzed according to the study treatment they actually received. Only participants who received study treatment with data collected at specified timepoints are reported and denoted by 'n' in categories. Here, '9999' indicates data was not calculated as 0 participants were analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose and 2 hours post-dose at Day 1 and Week 4; pre-dose at Week 12 (DB period); pre-dose and 2 hours post-dose at Week 16; pre-dose at Weeks 20, 24 and 52 (OLE period)

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only participants who received rilzabrutinib were analyzed for this endpoint.

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study treatment (Day 1) up to last dose+7 days (approximately 13 weeks: DB period) and (approximately 41 weeks: OLE period). Death was assessed from signing of informed consent form up to approximately 125 weeks.

Adverse event reporting additional description:

Analysis was performed on safety population.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 February 2022	The main purpose of this amendment was to incorporate feedback from health authorities, expand the population to include omalizumab-incomplete responders, as well as other clarifications and corrections deemed necessary by the Sponsor. In addition, other minor editorial changes (e.g, grammatical and minor typographical error corrections) were implemented throughout the protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
