Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 February 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 November 2022
Global end of trial reached?	Yes
Global end of trial date	20 December 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to evaluate the efficacy and safety of a modified-release orismilast tablet versus placebo in adults with moderate-to-severe plaque-type psoriasis.

Protection of trial subjects:

The study was conducted according to the ethical principles in line with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements, ensuring welfare of the study subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 December 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 126
Country: Number of subjects enrolled	Germany: 46
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 26
Worldwide total number of subjects	202
EEA total number of subjects	172

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	178
From 65 to 84 years	24

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

A total of 202 participants were randomized at 26 sites in Germany (8 sites), Poland (12 sites), the United Kingdom (1 site), and the US (5 sites).

Pre-assignment

Screening details:

The screening visit took place up to 28 days prior to Day 1. Subjects were screened for eligibility and signed the informed consent form.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

At the investigational site, each screened subject was assigned a subject identifier number during screening that was be used on all subject documentation. The subject identifier number contains the site number and the subject number and was assigned in numerical order at the screening visit based on chronological order of screening dates.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo Tablets BID

Arm description:

Subjects took placebo tablets twice a day during 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo.

Oral, twice daily morning and evening.

Arm title	Orismilast Modified Release Tablets 20 mg BID
------------------	---

Arm description:

Subjects took Orismilast Modified Release Tablets 20 mg BID twice a day during 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Orismilast Modified Release Tablets 20 mg BID
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg BID

Oral, twice daily morning and evening.

Arm title	Orismilast Modified Release Tablets 30 mg BID
------------------	---

Arm description:

Subjects took Orismilast Modified Release Tablets 30 mg BID twice a day during 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Orismilast Modified Release Tablets 30 mg BID
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

40 mg BID.

Oral, twice daily morning and evening.

Arm title	Orismilast Modified Release Tablets 40 mg BID
------------------	---

Arm description:

Subjects took Orismilast Modified Release Tablets 40 mg BID twice a day during 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Orismilast Modified Release Tablets 40 mg BID
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

40 mg BID.

Oral, twice daily morning and evening.

Primary: Percentage change in Psoriasis Activity and Severity Index (PASI) score from baseline at Week 16

End point title	Percentage change in Psoriasis Activity and Severity Index (PASI) score from baseline at Week 16
End point description: The Psoriasis Activity and Severity Index (PASI) is a measure of psoriatic disease severity, taking into account qualitative lesion characteristics (erythema, induration, and desquamation) and percentage of affected skin surface area on defined anatomical regions. PASI score ranges from 0 to 72, with higher scores reflecting greater disease severity. Erythema, induration/thickness, and scaling are scored on a scale of 0 (none) to 4 (very severe) on 4 anatomic regions of the body: head, trunk, upper limbs, and lower limbs. Degree of involvement on each of the 4 anatomic regions is scored on a scale of 0 (no involvement) to 6 (90% to 100% involvement). The total qualitative score (sum of erythema, thickness, and scaling scores) is multiplied by the degree of involvement for each anatomic region and then multiplied by a constant. The scores for each anatomic region are combined to yield the final PASI.

Secondary: Percent Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Weeks 16

End point title	Percent Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Weeks 16
-----------------	---

End point description:

The DLQI is a 10-item validated questionnaire completed by the patient used to assess the impact of skin disease on the patient's quality of life (QoL) during the previous week. The 10 questions cover the following topics: symptoms, embarrassment, shopping and home care, clothes, social and leisure, sport, work or study, close relationships, sex, and treatment. Each question is scored from 0 to 3 ("not at all," "a little," "a lot," and "very much," respectively), giving a total score ranging from 0 to 30. A high score is indicative of a poor QoL.

Secondary: Percent Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Weeks 20

End point title	Percent Change From Baseline in Dermatology Life Quality Index (DLQI) Score at Weeks 20
-----------------	---

End point description:

The DLQI is a 10-item validated questionnaire completed by the patient used to assess the impact of skin disease on the patient's quality of life (QoL) during the previous week. The 10 questions cover the following topics: symptoms, embarrassment, shopping and home care, clothes, social and leisure, sport, work or study, close relationships, sex, and treatment. Each question is scored from 0 to 3 ("not at all," "a little," "a lot," and "very much," respectively), giving a total score ranging from 0 to 30. A high score is indicative of a poor QoL.

Secondary: Percentage of Participants Who Experienced Psoriasis Rebound by Week 20

End point title	Percentage of Participants Who Experienced Psoriasis Rebound
-----------------	--

End point description:

The Psoriasis Activity and Severity Index (PASI) is a measure of psoriatic disease severity, taking into account qualitative lesion characteristics (erythema, induration, and desquamation) and percentage of affected skin surface area on defined anatomical regions. PASI score ranges from 0 to 72, with higher scores reflecting greater disease severity. Erythema, induration/thickness, and scaling are scored on a scale of 0 (none) to 4 (very severe) on 4 anatomic regions of the body: head, trunk, upper limbs, and lower limbs. Degree of involvement on each of the 4 anatomic regions is scored on a scale of 0 (no involvement) to 6 (90% to 100% involvement). The total qualitative score (sum of erythema, thickness, and scaling scores) is multiplied by the degree of involvement for each anatomic region and then multiplied by a constant. The scores for each anatomic region are combined to yield the final PASI.

Secondary: Percent Change From Baseline in Affected Body Surface Area (BSA) at Week 16

End point title	Percent Change From Baseline in Affected Body Surface Area (BSA) at Week 16
-----------------	---

End point description:

The BSA assessment estimates the extent of disease or skin affected by psoriasis and is expressed as a percentage of total body surface. BSA was determined by the Investigator or designee using the patient palm = 1% BSA rule. The patient's palm is measured from the wrist to the proximal interphalangeal and thumb.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 July 2021	The purpose of this amendment was to update the protocol to provide further details about the study design, study objectives and endpoints, subject selection criteria, as well as data collection and analyses.
20 May 2022	The main purpose of this amendment is to add PK sampling to enable meaningful PK data from the trial. Updates to the study design, study endpoint, subject selection criteria, as well as data collection and analyses were also made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
