

Clinical trial results:

A randomised, double-blind, placebo-controlled, parallel group, dose-finding study evaluating efficacy, safety and tolerability of BI 1291583 qd over at least 24 weeks in patients with bronchiectasis (Airleaf™)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 June 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 May 2024
Global end of trial reached?	Yes
Global end of trial date	30 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate a non-flat dose response curve and evaluate the dose-response relationship for 3 oral dosing regimens of BI 1291583 versus placebo on the primary endpoint, the time to first pulmonary exacerbation up to week 48. The secondary objective was to demonstrate superiority of BI 1291583 5 mg versus placebo on the primary endpoint, the time to first pulmonary exacerbation up to week 48, as well as on the key secondary endpoint, the rate of pulmonary exacerbations up to week 48.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all subjects as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 April 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	249
From 65 to 84 years	255
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This was a multi-center, randomised, placebo-controlled, double-blind, parallel group clinical trial in patients with bronchiectasis to investigate the efficacy, safety and tolerability of three different doses of BI 1291583 (orally, once daily). The treatment period was at least 24 and up to 48 weeks, with a follow-up period of 4 weeks.

Pre-assignment

Screening details:

All subjects were screened for eligibility prior to participation in the trial. Subjects attended a specialist site which ensured that they (the subjects) strictly met all inclusion and none of the exclusion criteria. Subjects were not to be allocated to a treatment group if any of the entry criteria were violated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Patients, investigators, central reviewers, and everyone involved in trial conduct or analysis or with any other interest in this double-blind trial were to remain blinded regarding the randomised treatment assignments until after final database lock.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Patients with bronchiectasis administered placebo matching BI 1291583 as tablets orally once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matching BI 1291583 once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first

Arm title	BI 1291583 1 mg
------------------	-----------------

Arm description:

Patients with bronchiectasis administered one 1 milligram (mg) dose of BI 1291583 as a tablet orally once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.

Arm type	Experimental
Investigational medicinal product name	BI 1291583
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1 mg dose of BI 1291583 once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.

Arm title	BI 1291583 2.5 mg
Arm description: Patients with bronchiectasis administered one 2.5 mg dose of BI 1291583 as a tablet orally once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.	
Arm type	Experimental
Investigational medicinal product name	BI 1291583
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One 2.5 mg dose of BI 1291583 once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.

Arm title	BI 1291583 5 mg
Arm description: Patients with bronchiectasis administered one 5 mg dose of BI 1291583 as a tablet orally once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.	
Arm type	Experimental
Investigational medicinal product name	BI 1291583
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One 5 mg dose of BI 1291583 once a day in the morning for at least 24 weeks, and up to 48 weeks or until the end of trial, whichever happens first.

Number of subjects in period 1^[1]	Placebo	BI 1291583 1 mg	BI 1291583 2.5 mg
Started	109	53	53
Treated	109	53	53
Completed	95	49	48
Not completed	14	4	5
Consent withdrawn by subject	6	3	4
Physician decision	4	1	-
Lost to follow-up	1	-	-
Other than listed	3	-	1

Number of subjects in period 1^[1]	BI 1291583 5 mg
Started	107
Treated	107
Completed	91
Not completed	16
Consent withdrawn by subject	12

Physician decision	-
Lost to follow-up	3
Other than listed	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of the 505 enrolled subjects, only 322 were treated.

Primary: Time to first pulmonary exacerbation up to 48 weeks after first drug administration

End point title	Time to first pulmonary exacerbation up to 48 weeks after first drug administration
End point description: The time to first pulmonary exacerbation up to 48 weeks after first drug administration is reported. A pulmonary exacerbation was defined as having 3 or more of the following symptoms for at least 48 hours resulting in a physician's decision to prescribe antibiotics: increased cough, increased sputum volume or change in sputum consistency, increased sputum purulence, increased breathlessness and/or decreased exercise tolerance, fatigue and/or malaise, hemoptysis. Dose or frequency change of background antibiotic treatment of ≥ 2 -fold when administered for ≥ 3 symptoms met the definition of exacerbation. "Onset of exacerbation" was defined by the onset of first recorded symptom. All observed data up to 48 weeks were included in the analysis. 99999 (1mg): Upper limit of 95% Confidence Interval was not estimable due to the lack of events at later time points. 99999 (2.5 and 5 mg): Median was not reached. Upper limit of 95% Confidence Interval was not estimable. TS.	
End point type	Primary
End point timeframe: From first drug administration, up to 48 weeks.

End point description:

Absolute change from baseline in QOL-B respiratory symptoms domain score at week 24 after first drug administration is reported. The QOL-B, a self-administered, patient-reported outcome measure assessing symptoms, functioning and health-related quality of life for subjects with bronchiectasis, contains 37 items on 8 scales (Respiratory Symptoms, Physical, Role, Emotional and Social Functioning, Vitality, Health Perceptions and Treatment Burden). The score range is 0-100, a higher score indicates fewer symptoms or better health status. Adjusted means were obtained using a REML estimation for the QOL-B respiratory symptoms domain based on a ANCOVA model. This model included treatment, P. aeruginosa status (positive vs negative) and the maintenance use of macrolides (yes vs no) at baseline as discrete fixed effects and baseline QOL-B respiratory symptoms domain score as continuous fixed effect.

TS. Patients with baseline and at least one on-treatment post-baseline value were included.

Secondary: Absolute change from baseline in St. George's Respiratory Questionnaire (SGRQ) Symptoms score at week 24 after first drug administration

End point title	Absolute change from baseline in St. George's Respiratory Questionnaire (SGRQ) Symptoms score at week 24 after first drug administration
-----------------	--

End point description:

Absolute change from baseline in SGRQ Symptoms score at week 24 after first drug administration is reported. The SGRQ, designed to measure health impairment in patients with Chronic Obstructive Pulmonary Disease, is divided into 2 parts measuring 3 domains: symptoms (part 1); activity limitation and social and emotional impact of disease (part 2). Total score is calculated by dividing the summed weights from the positive items in the questionnaire by the adjusted maximum possible weight. The result is expressed as a percentage: 100 represents the worst possible, and 0 the best possible health status.

Adjusted means were obtained using a REML estimation based on an ANCOVA model. The model included treatment, *P. aeruginosa* status (positive vs negative) and maintenance use of macrolides (yes vs no) at baseline as discrete fixed effects, baseline SGRQ Symptoms score as a continuous fixed effect. More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 May 2022	Global amendment 1 part 1 - The following main changes were introduced: 1) the "rate of pulmonary exacerbations up to 48 weeks", which had been a secondary endpoint in the initial protocol, was defined as key secondary endpoint. Section 7 was partially re-structured to reflect this change. 2) In the initial protocol, Quality of Life Questionnaire – Bronchiectasis (QOL-B) was a further endpoint. It was changed to 'QOL-B respiratory symptoms domain score' as a secondary endpoint, and 'QOL-B scores except respiratory symptoms domain score' as further endpoint. 3) Second sampling time point was added for <i>P. aeruginosa</i> at End of treatment (EOT). 4) Updates to the flow chart were made for clarification. 5) Bone metabolism markers were removed from safety parameters and added as biomarkers. It was clarified that sampling was to take place fasting and at the same time of the day, if possible. Sampling frequency was increased and a new additional bone metabolism marker (Tartrate resistant acid phosphatase 5b - TRAP5B) was added. 6) Clarification that chronic treatment with concomitant strong Cytochrome P450 3A4 (CYP3A4) and P-glycoprotein (P-gp) inhibitors and inducers was restricted. Examples for such medications were provided. 7) Safety monitoring committee was replaced by Data Monitoring Committee (DMC). No Sponsor-internal personnel was involved in interim analyses. 8) Changes were made in contraception requirements: a) footnote on definition of postmenopausal status: statement added that Follicle stimulating hormone (FSH) level could be used for confirmation in questionable cases; b) Contraception was extended from 30 days to 75 days after last drug intake for both Women of childbearing potential (WOCBP) and male participants with WOCBP partners. 9) For Korea, legal age of 19 was added and Korea was namely mentioned as a country where WOCBP were not allowed to participate.
03 May 2022	Global amendment 1 part 2 - 10) Exclusion criterion #1 was changed to: Aspartate aminotransferase (AST) and / or Alanine aminotransferase (ALT) >3.0 x Upper limit of normal (ULN) at Visit 1, or moderate or severe liver disease (defined by Child-Pugh score B or C hepatic impairment). 11) Exclusion criterion #4: it was clarified that patients who may be at risk by participating in the trial were not to be included, and it was added that this judgement was to be made by the investigator based on laboratory and medical examinations. 12) Exclusion criterion #6: it was added that patients with allergic bronchopulmonary aspergillosis being treated or requiring treatment were to be excluded, and clarified that patients with fungal infection and not responsive to treatment should be excluded. 13) Exclusion criterion #7: it was clarified that patients with acute infections in the need of treatment were not to be randomised. 14) Exclusion criterion #17 was changed to: currently enrolled in another investigational device or drug trial, or less than 30 days or 5 half-lives, whichever was longer, prior to Visit 2 since ending another investigational device or drug trial(s). 15) New exclusion criterion #20: Contraindications to the class of drugs under study including known hypersensitivity to the drug or its excipients. 16) Additional discontinuation criterion: The investigator considered that treatment continuation was negatively impacting the well-being of the patient, and that treatment discontinuation was in the best interest of the patient.

02 December 2022	<p>Global amendment 3 - The following main changes were introduced: 1) addition of new data on embryofoetal developmental toxicology outcomes. 2) The Pharmacokinetic (PK) safety evaluation of brensocatib was referenced. 3) New data from the Phase I trial 1397-0003 were added. 4) The Leicester Cough Questionnaire (LCQ) and Cough and Sputum Assessment Questionnaire (CASA-Q) were removed, and the Chronic Obstructive Pulmonary Disease (COPD) Assessment Test (CAT) was included. 5) A new section was added on Salbutamol/Albuterol as an Auxiliary medicinal product (AxMP). 6) Medications were added that needed to be stable prior to randomisation to reduce variability of bone turnover biomarkers. 7) A new major metabolite was added. 8) Information on Adverse events (AEs) was updated. 9) The wording regarding male and female contraception was revised. 10) Exclusion criteria: 'acute Severe acute respiratory syndrome coronavirus (SARS CoV) 2 infection' was deleted as an individual criterion and added into exclusion criterion #7 instead. 11) The contraception requirement after last trial drug intake was prolonged from 75 days to 9 months for WOCBP, and to 6 months for male participants with WOCBP partners. 12) It was added that for Hepatitis C virus (HCV) a Ribonucleic acid (RNA) test was to be performed if Hepatitis C antibodies result was positive, to confirm if the infection was active.</p> <p>Global amendment 3 includes the changes made in the global amendment 2, which was an internal version and never submitted to any Competent Authority (CA)/Institutional Review Board (IRB)/Independent Ethics Committee (IEC).</p>
14 April 2023	<p>Global amendment 4 - The following main changes were introduced: 1) It was clarified that an interim pharmacodynamic analysis was not planned. 2) The implementation of an adjudication committee was introduced, and a further endpoint 'rate of adjudicated pulmonary exacerbation' was added. 3) Periodontal discontinuation criteria were corrected, and assessment procedures clarified. 4) The subgroups with history of pulmonary exacerbations at baseline were changed from '0-2, ≥ 3' to '0-1, ≥ 2'. 5) Pre-dose PK time window for trough samples at Visits 3, 5 and 7 was extended from -1 h to -2 h.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
