

Clinical trial results:

Phase IIb, randomized, double-blind, placebo-controlled study in parallel groups assessing the efficacy and safety of two doses of SOM3355 in patients suffering from Huntington's Disease with choreic movements.

Summary

EudraCT number	2021-003453-28

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 July 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 June 2024
Global end of trial reached?	Yes
Global end of trial date	25 June 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to assess the efficacy of two doses of SOM3355 (400 mg/day and 600 mg/day taken twice daily [BID] over at least 8 weeks at maintenance dose) compared to placebo to reduce chorea in HD patients measured by the change in TMC score (primary efficacy endpoint).

Protection of trial subjects:

This study was conducted following the protocol and according to the ethical principles derived from the International Council for Harmonisation (ICH) guidelines for Good Clinical Practice (GCP), and applicable laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 August 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Worldwide total number of subjects	139
EEA total number of subjects	116

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	120
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 139 patients with Huntington's disease were randomized and treated between August 2022 and April 2024 at 23 sites in 7 European countries.

Pre-assignment

Screening details:

The main inclusion criteria were having a Unified Huntington's Disease Rating Scale (UHDRS) Total Maximal Chorea (TMC) score ≥ 10 and Total Functional Capacity (TFC) score ≥ 7 . The main exclusion criteria were being co-administered with VMAT2 inhibitors or other antichoreic treatments, having hypotension, or taking >2 antihypertensive drugs.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

All participants, site staff, Sponsor, contract research organization (CRO), and vendors involved with the study remained blinded to treatment assignments until the database was locked and the study unblinded.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo capsules were administered once daily (OD) for up-titration and down-titration (1 week each) and twice daily (BID) for at least 9 weeks at maintenance dose.

Arm title	SOM3355 400mg/day
------------------	-------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	SOM3355 400mg/day
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

SOM3355 200mg capsules were administered once daily (OD) for up-titration and down-titration (1 week each) and twice daily (BID) for at least 9 weeks at maintenance dose.

Arm title	SOM3355 600mg/day
------------------	-------------------

Arm description: -

Arm type	Experimental
----------	--------------

Investigational medicinal product name	SOM3355 600mg/day
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

SOM3355 200mg capsules were administered once daily (OD) for up-titration and down-titration, and twice daily (BID) for up-titration (1 week each). SOM3355 300mg capsules were administered twice daily (BID) for at least 8 weeks at maintenance dose.
