

Clinical trial results:

An Open-Label, Randomised, Phase 4 Study of Continuing Sodium Zirconium Cyclosilicate (SZC) after Discharge in Participants with Chronic Kidney Disease treated for Hyperkalaemia

Summary

EudraCT number	2021-003527-14
Trial protocol	IT ES FR NL BE
Global end of trial date	10 December 2024

Results information

Result version number	v1
This version publication date	31 October 2025
First version publication date	31 October 2025

Trial information

Trial identification

Sponsor protocol code	D9480C00023
-----------------------	-------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05347693
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 January 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 December 2024
Global end of trial reached?	Yes
Global end of trial date	10 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of continuing SZC as part of the discharge medications, compared to standard of care (SoC), in maintaining normokalaemia (NK)

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with ICH / GCP, applicable regulatory requirements and the AstraZeneca policy on Bioethics.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 March 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Spain: 145
Country: Number of subjects enrolled	France: 12
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Italy: 16
Country: Number of subjects enrolled	Netherlands: 1
Worldwide total number of subjects	186
EEA total number of subjects	180

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	38
From 65 to 84 years	126
85 years and over	22

Subject disposition

Recruitment

Recruitment details:

A total of 186 participants were screened from 28 study sites across 6 countries.

Pre-assignment

Screening details:

Of 186 participants entering the inpatient phase, 137 were randomized 1:1 to Arm A or B for the outpatient phase; one did not receive treatment.

The remaining 49 were not randomized due to consent withdrawal, eligibility issues, screening failure, death, or other reasons.

Pre-assignment period milestones

Number of subjects started	186
Number of subjects completed	137

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Adverse event, non-fatal: 3
Reason: Number of subjects	Adverse event, serious fatal: 2
Reason: Number of subjects	Consent withdrawn by subject: 10
Reason: Number of subjects	Physician decision: 5
Reason: Number of subjects	Withdrawn in error: 1
Reason: Number of subjects	Participant was discharged from hospital: 1
Reason: Number of subjects	screening failure: 8
Reason: Number of subjects	Failure to meet inclusion/ exclusion criteria: 19

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Outpatient Period - Arm A: SZC
------------------	--------------------------------

Arm description:

Participants discharged with SZC, as per local label, to manage hyperkalaemia (HK) until 7 days before the end of the study.

Arm type	Experimental
Investigational medicinal product name	Sodium zirconium cyclosilicate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension in sachet
Routes of administration	Oral use

Dosage and administration details:

As per local label

Arm title	Outpatient Period - Arm B: Standard of Care (SoC)
------------------	---

Arm description:

SZC was withdrawn and participants discharged with SoC, as per local practice, to manage HK until the end of study.

Arm type

SoC

No investigational medicinal product assigned in this arm

Number of subjects in period 1 ^[1]	Outpatient Period - Arm A: SZC	Outpatient Period - Arm B: Standard of Care (SoC)
Started	68	69
Received at least 1 treatment	68	68
Completed	42	56
Not completed	26	13
Adverse event, serious fatal	6	2
Consent withdrawn by subject	8	5
Development of withdrawal criteria: Severe HK	-	1
Adverse event, non-fatal	9	-
Compliance unmonitored; complex circumstances	1	-
Start of dialysis	-	1
Started dialysis on 16 Feb 2023	1	-
Lost to follow-up	-	1
The participant entered hemodialysis	-	1
Scheduled hemodialysis	1	-
Severe HK	-	1
Relocated; unable to attend study visits	-	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Of 186 participants entering the inpatient phase, 137 were randomized 1:1 to Arm A or B for the outpatient phase.

Primary: Occurrence (Yes/No) of NK (K+ between 3.5 and 5.0 mmol/L, inclusive) at 180 Days Post-discharge

End point title	Occurrence (Yes/No) of NK (K+ between 3.5 and 5.0 mmol/L, inclusive) at 180 Days Post-discharge
End point description: A response was defined as a participant having serum K+ within 3.5 and 5.0 mmol/L at 180 days post-discharge. No response was defined as a participant who: 1) used rescue therapy for hyperkalaemia (HK) during the outpatient period; 1) died prior to 180 days post-discharge; 3) were missing an assessment at visit 10; 4) were lost to follow-up prior to 180 days post-discharge; 5) down-titrated (or discontinued) RAASi. The number of participants who had a response/no response is presented.	
End point type	Primary

Statistical analyses

Statistical analysis title	Equivalence test
Comparison groups	Outpatient Period - Arm A: SZC (FAS) v Outpatient Period - Arm B: SoC (FAS)
Number of subjects included in analysis	137
Analysis specification	Pre-specified
Analysis type	equivalence ^[1]
P-value	= 0.558
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	0.81
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.39
upper limit	1.66

Notes:

[1] - Equivalence margin is 0.29.

Sample size estimate:

- Two group χ^2 test
- Significance level: 5% (2-sided)
- Power: 80%
- Proportions with NK (K+ between 3.5 and 5.0 mmol/L, inclusive) at 180 days post-discharge:
 - Arm A (SZC): 0.88
 - Arm B (SoC): 0.59

Secondary: Time to First Occurrence of Any Component of All-cause Hospital Admissions or ED Visits with HK as a Contributing Factor, or All-cause Death, or Use of Rescue Therapy for HK at Any Time Post-discharge up to 180 Days

End point title	Time to First Occurrence of Any Component of All-cause Hospital Admissions or ED Visits with HK as a Contributing Factor, or All-cause Death, or Use of Rescue Therapy for HK at Any Time Post-discharge up to 180 Days
-----------------	---

End point description:

The time to first occurrence of all-cause hospital admission, emergency department (ED) visits with HK as a contributing factor, all-cause death or use of rescue therapy for HK was calculated as date of first occurrence of (all-cause hospital admission, ED visits with HK as a contributing factor, all-cause death, use of rescue therapy for HK, date of loss to follow-up) – date of randomization + 1.

The median time to event (days) is presented. '9999' means 'Not Applicable' as no median time or confidence interval could be calculated due to fewer than 50% of participants experienced an event or there were too few events to estimate the confidence interval for the median, respectively.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AEs) were collected from the start of the outpatient phase (OP) through 7 days post-last dose. AEs which occurred prior to first dose of investigational product that worsened after dosing during the OP were recorded; up to ~6 months

Adverse event reporting additional description:

AEs for the SSR are presented. Of the 137 participants randomised into the 2 arms (68 in Arm A: SZC and 69 in Arm B: SoC), there was 1 participant in the SoC who did not receive treatment during the OP and was excluded from the safety analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 August 2021	Study intervention dispensation was added at visit 4 to allow for study intervention dispensation if dose needed to be adjusted.
07 July 2022	RAASi down-titration (including discontinuation) is now defined as non-response and included in the primary composite outcome as treatment failure due to its potential to normalise K levels. Objective #2 now assesses SZC's effect on reducing hospital admissions or ED visits with HK. Objective #3 focuses on SZC's effect on reducing hospital admissions or ED visits with HK. A new objective evaluates SZC's role in lowering the risk of RAASi down-titration. Objectives #4 to 10 were reclassified as exploratory to simplify endpoints. Inclusion criterion #4 now defines HK per site practice, with K >5.0 to ≤6.5 mmol/L. Exclusion criteria #3 and #14 were merged to exclude all kidney transplant recipients. Sensitivity analyses were updated to reflect SZC's benefit for mild versus moderate/severe HK. Re-screening was allowed (up to 2). Duration of inpatient stay was extended from 14 to 21 days post-baseline. Definition of overdose during SZC maintenance phase was modified from 15 g/day to 10 g/day.
16 October 2023	First secondary endpoint was revised to include all-cause hospital admissions or ED visits with HK as a contributing factor. The sample size was recalculated from 344 to 104 total evaluable participants. Inclusion criteria were expanded to allow participants with any stage of CKD or eGFR < 90 mL/min/1.73 m ² . Clarifications were made to inclusion criterion #4 regarding K levels at enrolment. Exclusion criteria were simplified to improve clarity and to exclude participants with a hospitalisation for an acute cardiovascular event within 12 weeks prior to screening. The planned interim analysis was cancelled due to the reduced sample size.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to high, imbalanced missing K data at Day 180 (51.5% SZC, 36.2% SoC), results are described with no conclusive statement and should be interpreted with caution.

Notes:
