

Clinical trial results:

A Randomized, Double-Blind, Placebo-Controlled, Phase 3 Study With an Open-Label Extension Assessing the Efficacy, Safety, and Pharmacokinetics/Pharmacodynamics of Tirzepatide in Pediatric and Adolescent Participants With Type 2 Diabetes Mellitus Inadequately Controlled With Metformin, or Basal Insulin, or Both.

Summary

EudraCT number	2021-003612-31

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 January 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 July 2024
Global end of trial reached?	Yes
Global end of trial date	28 January 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to learn more about the safety and efficacy of tirzepatide compared to placebo in children or teenagers with type 2 diabetes taking metformin, or basal insulin, or both. The overall study will last about 60 weeks with up to 14 clinic visits and 6 phone visits. Clinic visits will include blood sample collection, physical exam and questionnaire.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 April 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Brazil: 16
Country: Number of subjects enrolled	India: 6
Country: Number of subjects enrolled	Israel: 8
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Mexico: 31
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 32
Worldwide total number of subjects	99
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	5
Adolescents (12-17 years)	94
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Not applicable

Period 1

Period 1 title	Double-blind Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	5 Milligram (mg) Tirzepatide
------------------	------------------------------

Arm description:

Participants received 5 mg Tirzepatide once weekly (QW) administered as subcutaneous (SC) injection via single-dose pen (SDP) for 30 weeks in double-blind period.

Arm type	Experimental
Investigational medicinal product name	Tirzepatide
Investigational medicinal product code	LY3298176
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 5 mg Tirzepatide QW administered as SC injection via SDP for 30 weeks in double-blind period.

Arm title	10 mg Tirzepatide
------------------	-------------------

Arm description:

Participants received 10 mg Tirzepatide QW administered as SC injection via SDP for 30 weeks in double-blind period.

Arm type	Experimental
Investigational medicinal product name	Tirzepatide
Investigational medicinal product code	LY3298176
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 10 mg Tirzepatide QW administered as SC injection via SDP for 30 weeks in double-blind period.

Arm title	Placebo
------------------	---------

Arm description:

Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period.

Number of subjects in period 1	5 Milligram (mg) Tirzepatide	10 mg Tirzepatide	Placebo
Started	32	33	34
Received at Least 1 Dose of Study Drug	32	33	34
Completed	29	29	32
Not completed	3	4	2
Consent withdrawn by subject	1	2	1
Adverse event, non-fatal	2	-	-
Withdrawal due to Caregiver Circumstances	-	1	-
Sponsor-Terminated Enrollment Error	-	1	-
Lost to follow-up	-	-	1

Period 2

Period 2 title	Open-label Period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	5 mg Tirzepatide

Arm description:

Participants received 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period

Arm type	Experimental
Investigational medicinal product name	Tirzepatide
Investigational medicinal product code	LY3298176
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.

Arm title	10 mg Tirzepatide
------------------	-------------------

Arm description:

Participants received 10 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period

Arm type	Experimental
Investigational medicinal product name	Tirzepatide
Investigational medicinal product code	LY3298176
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 10 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period

Arm title	5 mg Tirzepatide
------------------	------------------

Arm description:

Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period and 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.

Arm type	Experimental
Investigational medicinal product name	Tirzepatide
Investigational medicinal product code	LY3298176
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period and 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.

Number of subjects in period 2	5 mg Tirzepatide	10 mg Tirzepatide	5 mg Tirzepatide
Started	29	29	32
Completed	29	29	32

Reporting group description: Participants received 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period	
Reporting group title	10 mg Tirzepatide
Reporting group description: Participants received 10 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period	
Reporting group title	5 mg Tirzepatide
Reporting group description: Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period and 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.	
Subject analysis set title	Pooled doses of Tirzepatide (5mg/10mg)
Subject analysis set type	Full analysis
Subject analysis set description: Participants received either 5 mg or 10 mg Tirzepatide QW administered as SC injection via SDP for 30 weeks in double-blind period.	
Subject analysis set title	Placebo/5 mg Tirzepatide
Subject analysis set type	Full analysis
Subject analysis set description: Participants who received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period were administered with 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.	
Subject analysis set title	5 mg Tirzepatide
Subject analysis set type	Full analysis
Subject analysis set description: 5 mg Tirzepatide/5 mg Tirzepatide: Participants received 5 mg Tirzepatide QW administered as SC injection via SDP for 30 weeks in double-blind period and 22 weeks in open-label period with an additional 4 weeks of safety follow-up. Placebo/5 mg Tirzepatide: Participants received placebo QW administered as SC injection via SDP for 30 weeks in double-blind period and 5 mg Tirzepatide QW administered as SC injection via SDP for 22 weeks in open-label period.	

Primary: Change From Baseline in Hemoglobin A1c (HbA1c) (Pooled Doses of Tirzepatide 5 mg and 10 mg)

End point title	Change From Baseline in Hemoglobin A1c (HbA1c) (Pooled Doses of Tirzepatide 5 mg and 10 mg) ^[1]
End point description: HbA1c is the glycosylated fraction of hemoglobin A. HbA1c is measured primarily to identify average plasma glucose concentration over prolonged periods of time. Least Squares (LS) mean was determined by ANCOVA model for endpoint measures: Variable = Baseline + Baseline Antihyperglycemic medication	

+ Baseline Age group + Treatment (Type III sum of squares)

(APD): All randomized participants who received at least one dose of study drug and had evaluable data for this outcome obtained during the double-blind period regardless of adherence to study intervention or initiation of rescue antihyperglycemic medication. This analysis was planned to measure the outcome by combining the 5 mg tirzepatide treatment arm and 10 mg tirzepatide treatment arm as pooled doses of tirzepatide (5 mg/10 mg).

End point type	Primary
----------------	---------

End point timeframe:

Baseline, Week 30

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No inferential statistics was performed for this event.

End point values	Placebo	Pooled doses of Tirzepatide (5mg/10mg)

Secondary: Change From Baseline in Body Mass Index (BMI) Standard Deviation Score (Age and Sex-matched)

End point title	Change From Baseline in Body Mass Index (BMI) Standard Deviation Score (Age and Sex-matched)
-----------------	--

End point description:

BMI SDS (age and sex matched), calculated using the World Health Organization (WHO) growth reference standards. BMI is calculated as weight in kilograms divided by height in meters squared (kg/m²) and converted to a Z-score (SDS) based on WHO reference data. A Z-score of 0 represents the population mean for a given age and sex. A BMI SDS between -1 and +1 is considered normal. Obesity is defined as BMI SDS > +2. Reductions in BMI SDS indicate improvement in weight status for individuals with obesity.

LS mean was determined by ANCOVA model for endpoint measures: Variable = Baseline + Baseline Antihyperglycemic medication + Baseline Age group + Treatment (Type III sum of squares)

APD: All randomized participants who received at least one dose of study drug and had evaluable data for this outcome obtained during the double-blind period regardless of adherence to the study intervention or initiation of rescue antihyperglycemic medication.

Secondary: Change From Baseline in PedsQL Generic Core Scale

End point title	Change From Baseline in PedsQL Generic Core Scale ^[2]
-----------------	--

End point description:

The PedsQL Measurement Model measures health-related quality of life (HRQOL) in children (ages 8 to 12) and teenagers (ages 13 to 18). The 23-item PedsQL Generic Core Scale includes physical, emotional, social, and school functioning dimensions. The PedsQL Generic Core yields two summary scores: Physical Summary and Psychosocial Summary. Scores are transformed on a 0-100 scale, with higher scores indicating better functioning. Each item is scored from 0 (never) to 4 (almost always). Items are reverse scored and linearly transformed to a 0-100 scale so that higher scores indicate better HRQOL; the total score therefore ranges from 0 (worst) to 100 (best). Higher scores indicate better health-related quality of life. LS mean was determined by the MMRM model for post-baseline measures: Variable = Baseline + Baseline Antihyperglycemic Medication + Baseline Age Group + Treatment + Time + Treatment*Time (Type III sum of squares). Variance-Covariance structure (Actual Value) = Unstructured.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 52

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Gender-specific events only occurring in male or female participants have had the number of participants At Risk adjusted accordingly.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
