Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 October 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 October 2023
Global end of trial reached?	Yes
Global end of trial date	08 January 2024
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the long-term humoral immune response against SARS-CoV-2 between 3 and 12 months after the last dose (before ICF signature) of an mRNA anti-SARS-CoV-2 vaccine (baseline assessment)

4 cohorts:

- Cohort A.1+ A.2: Subjects with active solid malignancies undergoing immunotherapy, endocrine therapy, or targeted agents (alone or in combination, except if with cytotoxic chemotherapy)
- Cohort A.3: Subjects with active solid malignancies undergoing cytotoxic chemotherapy +/- any other treatment modality in combination
- Cohort B: Subjects with active haematological cancers undergoing systemic treatment
- Cohort C: Subjects with malignancy in complete remission, without active cancer treatment for the last year

Protection of trial subjects:

The protection of subject data and the related rights are guaranteed by the General Data Protection Regulation (European Regulation 2016/679), by the law of 22 August 2002 concerning subject rights in Belgium as well as any new applicable legislation in the participating countries.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 December 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 152
Worldwide total number of subjects	152
EEA total number of subjects	152

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	90
From 65 to 84 years	61
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Between 01/12/2023 and 26/10/2023 subjects with histologically or cytologically confirmed cancer diagnosis were recruited in 1 country (Belgium).

Pre-assignment

Screening details:

*Subj undergoing active systemic cancer treatment at the time of the last dose of the anti-SARS-CoV-2 mRNA vaccine in non-metastatic/curative setting or metastatic/palliative setting

*or subj undergoing follow-up after confirmed cancer complete remission without active cancer treatment for the last 12 mo at the time of the last dose of the vaccine

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	mRNA vaccination against SARS-CoV-2
------------------	-------------------------------------

Arm description:

anti-SARS-CoV-2 booster dose during the study, as per the national guidelines for vaccination and respecting other local/national recommendations about the ideal timing for vaccination

Arm type	Other
Investigational medicinal product name	Comirnaty/Spikevax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for dispersion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

*0.3 mL (single dose after dilution)

*intramuscular (i.m.) administration

Number of subjects in period 1	mRNA vaccination against SARS-CoV-2
Started	152
Completed	77
Not completed	75
Consent withdrawn by subject	8
Removed by error	1
Technical problems	1
Death	4
Study terminated by sponsor	20
Lost to follow-up	6
Not evaluable	3
Protocol deviation	32

Post-hoc: Absolute Titers of Anti-Spike Antibodies at baseline

End point title	Absolute Titers of Anti-Spike Antibodies at baseline
-----------------	--

End point description:

At baseline, the overall median anti-Spike antibody titer was 9,017 U/mL [IQR, 2,180–26,871], with a significant difference observed across cohorts ($p=0.005$). Patients in cohort A.3 exhibited lower titers (3,875 U/mL [IQR, 202–13,863]) compared to those in cohort A.1–2 (11,293 U/mL [IQR, 3,359–26,487], $p=0.003$) and in cohort C (8,828 U/mL [IQR, 3,785–28,582], $p=0.07$). Patients in cohort B had the lowest titers (330 U/mL [IQR, 107–2,888]), which were significantly lower than those in cohort A.1–2 ($p=0.004$) and cohort C ($p=0.02$).

End point type	Post-hoc

baseline

End point values	EVALUABLE SUBJECTS			
Subject group type	Subject analysis set			
Number of subjects analysed	107 ^[3]			
Units: U/mL				
median (inter-quartile range (Q1-Q3))	9.017 (2.180 to 26.871)			

Notes:

[3] - N=107 evaluable at baseline

Statistical analyses

No statistical analyses for this end point

Post-hoc: Absolute Titers of Anti-Spike Antibodies at post-boost

End point title	Absolute Titers of Anti-Spike Antibodies at post-boost
-----------------	--

End point description:

At post-booster timepoint, the overall median anti-Spike antibody increased to 30,079 U/mL [IQR, 13,669–56,337], with significant differences across cohorts ($p=0.012$). Patients in cohort B again

exhibited the lowest titers (1,504 U/mL [IQR, 287–21,182]), which were significantly lower than those in cohort A.1–2 (35,239 U/mL [IQR, 23,192–64,098], $p=0.005$) and in cohort C (30,414 U/mL [IQR, 9,722–39,142], $p=0.03$). While patients in cohort A.3 had numerically lower titers (25,094 U/mL [IQR, 3,666–62,819]) than cohort A.1–2 and cohort C, these differences were not statistically significant ($p=0.18$ and $p=0.55$, respectively)

16 November 2023	New amended patient information sheet/informed consent (including addendum) New amended protocol New amended Reference Safety Information New amended documents or information related to IMP or IMPD

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The trial has been stopped prematurely due to slow accrual. All subjects had an immune response, resulting in a total immune response rate in all cohorts. Assessing differences in immune response according to subjects' characteristics was not possible

Notes:
