

Clinical trial results:

A 4 week, Phase III, multicenter, double-masked, vehicle-controlled study to evaluate safety and efficacy of Cenegermin (Oxervate®) 20 mcg/mL ophthalmic solution versus vehicle, in patients with severe Sjogren's dry eye disease under treatment with Cyclosporine A (PROTEGO-2 study)

Analysis stage	Final
Date of interim/final analysis	21 December 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 May 2023
Global end of trial reached?	Yes
Global end of trial date	24 May 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The study objective was to assess the efficacy and safety of cenegermin (rhNGF) ophthalmic solution at 20 mcg/mL concentration administered three times daily (TID) for four weeks in patients with severe Sjogren's dry eye disease (DED) who were under treatment with topical Cyclosporine A (CsA) or other drugs of the same class.

Protection of trial subjects:

The study was conducted in full compliance with applicable legislation, Food and Drug Administration (FDA), European Medicine Agency (EMA) and International Conference on Harmonisation (ICH) guidelines for good clinical practice (GCP) and in accordance with the ethical principles that have their origins in the Declaration of Helsinki and 21 CFR Section 312.120.

Eligible patients took part in the study after providing the written informed consent approved by the Independent Ethics Committee (IEC) or Institutional Review Board (IRB). Informed consent was obtained before starting any procedure pertaining to the study (i.e., all the procedures described in the protocol). A Patient Information Sheet and informed consent form (ICF), which met regulatory requirements and were appropriate for this study, were provided to the patient. Each patient read or was read (if he or she could not read or write), assent understanding of, and sign or thumb-printed an instrument of informed consent and after having had an opportunity to discuss them with the Principal Investigator (PI) before signing; each patient was made aware that he or she could withdraw from the study at any time.

Patients could voluntarily discontinue treatment with the IMP(s) for any reason at any time. Patients could be withdrawn from treatment with the IMP and assessments at any time, if deemed necessary by the Investigator. The investigator advised patients that prematurely discontinued on any therapies or treatments for their condition and referred them for further treatment, as appropriate.

Before the trial formally started, Dompé farmaceutici S.p.A. took out a study-specific insurance contract according to national laws for patients/Investigators/Institutions participating in the clinical trial.

Background therapy:

If strictly needed, the patient could take preservative free artificial tears (provided by the Sponsor). One drop of Blink® Tears or equivalent was instilled in both eyes during the screening week, only if strictly needed by the patient. The patient documented in the patient's Diary the number of additional drops administered for each eye.

One drop of Blink® Tears or equivalent was instilled in both eyes during the four weeks of masked treatment, only if strictly needed by the patient. The patient documented in the patient's Diary the number of additional drops administered for each eye.

One drop of Blink® Tears or equivalent was instilled in both eye TID (morning, afternoon, and evening) during the initially eight weeks of follow-up. The patient, only if strictly needed, could administer additional drops and had to document in the patient's Diary the number of additional drops administered for each eye.

Evidence for comparator:

As part of the development plan, the present study was designed to evaluate the safety and efficacy of Oxervate® (cenegermin ophthalmic solution, rhNGF) vs vehicle in patients with severe Sjogren's DED under treatment with Cyclosporine A.

No particular safety risks are foreseen with respect to the safety profile of the marketed product Oxervate® (cenegermin 20 mcg/mL ophthalmic solution). The patients with severe Sjogren's DED participating in this study could potentially benefit from the application of cenegermin.

Actual start date of recruitment	17 March 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 42
Country: Number of subjects enrolled	Italy: 43
Worldwide total number of subjects	85
EEA total number of subjects	43

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	62
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Three sites in Italy and 7 sites in US enrolled patients. A total of 97 patients were assessed for eligibility. There were 12 screening failures. The remaining patients (n=85) were randomized 1:1 as follows: 44 to cenegermin and 41 to vehicle. One patient in the vehicle group did not receive study medication and was excluded from the SAF and FAS.

Pre-assignment

Screening details:

Adults (≥ 18 years) with a diagnosis of severe Sjögren's DED, characterized by: corneal and/or conjunctival staining with fluorescein using NEI grading system ≥ 3 , SANDE questionnaire >25 mm, Schirmer test I (without anaesthesia) $\geq 2 \leq 5$ mm/5min. BCDVA score ≥ 0.1 decimal units (20/200 Snellen value) in each eye at enrolment. Under treatment with CsA.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This was a double-blind study. Blinding was ensured as described in the Study Protocol: vials containing cenegermin or vehicle were identical in appearance, and the contents of the vials were indistinguishable. All staff directly involved in the analysis of study results remained masked to treatment assignments while the study was in progress. The blind was not broken for any patient during the study before the database lock.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cenegermin

Arm description:

Group 1: Cenegermin (rhNGF 20 mcg/mL)

Arm type	Experimental
Investigational medicinal product name	Cenegermin
Investigational medicinal product code	
Other name	Oxervate®, rhNGF
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ocular use

Dosage and administration details:

One drop of cenegermin 20 mcg/mL was instilled in both eyes TID (every six hours, e.g., 7:00 am, 01:00 pm; 07:00 pm).

Arm title	Vehicle
------------------	---------

Arm description:

Group 2: Placebo vehicle (Vehicle vials). Out of the 41 patients enrolled in the study and assigned to the vehicle treatment group, one patient did not receive any dose of study medication and was therefore excluded from the SAF and FAS populations. Thus, results are reported for the 40 patients in the vehicle group who received treatment.

Arm type	Placebo
Investigational medicinal product name	Vehicle
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ocular use

Dosage and administration details:

One drop of vehicle ophthalmic solution was instilled in both eyes TID (every six hours, e.g., 7:00 am, 01:00 pm; 07:00 pm).

Number of subjects in period 1^[1]	Cenegermin	Vehicle
Started	44	40
Completed	41	39
Not completed	3	1
Consent withdrawn by subject	2	1
Can no longer make office visits	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of the 85 patients enrolled in the study, one patient in the vehicle group was excluded from the SAF and FAS populations because this patient did not receive any dose of study medication. Therefore, both SAF and FAS populations consisted of 84 patients: 44 patients in the cenegermin group and 40 patients in the vehicle group.

Statistical analysis title	TS (Treatment - Eye drops) - Week 4
-----------------------------------	-------------------------------------

Statistical analysis description:

Analysis is based on MMRM with Multiple Imputation under missing not at random using retrieve dropouts with change from baseline in IDEEL Dry eye Treatment satisfaction & Bother module at each timepoint adjusting by gender, age class, IDEEL scale baseline value, treatment, visit, and treatment by visit interaction. Subject was considered as a random effect and the covariance matrix used was unstructured.

Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.586 ^[12]
Method	Mixed Model for Repeated Measures
Parameter estimate	LS means difference
Point estimate	2.771
Confidence interval	
level	95 %
sides	2-sided
lower limit	-7.213
upper limit	12.754

Notes:

[12] - Not statistically significant result.

Notes:

[64] - 84 subjects are included in the FAS, however only 79 subjects are analyzed in this table due to the presence of missing values.

[65] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	Frequency - Week 8
Comparison groups	Cenegermin v Vehicle

Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[66]
P-value	= 0.342 ^[67]
Method	Wilcoxon (Mann-Whitney)

Notes:

[66] - 84 subjects are included in the FAS, however only 78 subjects are analyzed in this table due to the presence of missing values.

[67] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	Frequency - Week 12
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[68]
P-value	= 0.821 ^[69]
Method	Wilcoxon (Mann-Whitney)

Notes:

[68] - 84 subjects are included in the FAS, however only 79 subjects are analyzed in this table due to the presence of missing values.

[69] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	Frequency - Week 16
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[70]
P-value	= 0.926 ^[71]
Method	Wilcoxon (Mann-Whitney)

Notes:

[70] - 84 subjects are included in the FAS, however only 79 subjects are analyzed in this table due to the presence of missing values.

[71] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Secondary: Number of Patients experienced a Worsening in Symptom Scores (SANDE Global Scores) and/or NEI Score \geq 50% at Week 4

End point title	Number of Patients experienced a Worsening in Symptom Scores (SANDE Global Scores) and/or NEI Score \geq 50% at Week 4
-----------------	--------------------------------------------------------------------------------------------------------------------------

End point description:

Number of Patients experienced a Worsening in Symptom Scores (SANDE Global Score) and/or NEI Score \geq 50% at Week 4.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 4

End point values	Cenegermine	Vehicle		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	44 ^[72]	40 ^[73]		
Units: Subjects				
Worsening in symptom scores (SANDE global score)	14	5		
NEI score $\geq 50\%$	1	1		
Worsening in symptom scores and/or NEI score ≥ 50	15	5		

Notes:

[72] - Wors. Symptom scores, n=43; NEI score $\geq 50\%$, n=42; Wors. symptom scores and/or NEI score $\geq 50\%$, n=42.

[73] - Wors. Symptom scores, n=39; NEI score $\geq 50\%$, n=37; Wors. symptom scores and/or NEI score $\geq 50\%$, n=37.

Statistical analyses

Statistical analysis title	Worsening in symptom scores (SANDE global score)
Comparison groups	Cenegermine v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[74]
P-value	= 0.0344 ^[75]
Method	Chi-squared

Notes:

[74] - 84 subjects are included in the FAS, however only 82 subjects are analyzed in this table due to the presence of missing values.

[75] - p-value corresponds to Chi-square test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	NEI score $\geq 50\%$
Comparison groups	Cenegermine v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[76]
P-value	= 1 ^[77]
Method	Fisher exact

Notes:

[76] - 84 subjects are included in the FAS, however only 79 subjects are analyzed in this table due to the presence of missing values.

[77] - Not statistically significant result. p-value corresponds to a Fisher's exact test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	Worsening in symptom scores and/or NEI score ≥ 50
Comparison groups	Cenegermine v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[78]
P-value	= 0.0235 ^[79]
Method	Chi-squared

Notes:

[78] - 84 subjects are included in the FAS, however only 79 subjects are analyzed in this table due to the presence of missing values.

[79] - p-value corresponds to Chi-square test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analyses

Statistical analysis title	QoL (Impact on Daily Activities) - Week 4
Comparison groups	Vehicle v Cenegermin
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[80]
P-value	= 0.888 ^[81]
Method	t-test, 2-sided

Notes:

[80] - 84 subjects are included in the FAS, however only 81 subjects (Cenegermin, n=43; Vehicle, n=38) are analyzed in this table due to the presence of missing values.

[81] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Daily Activities) - Week 8
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[82]
P-value	= 0.651 ^[83]
Method	t-test, 2-sided

Notes:

[82] - 84 subjects are included in the FAS, however only 77 subjects (Cenegermin, n=40; Vehicle, n=37) are analyzed in this table due to the presence of missing values.

[83] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Daily Activities) - Week 12
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[84]
P-value	= 0.267 ^[85]
Method	Wilcoxon (Mann-Whitney)

Notes:

[84] - 84 subjects are included in the FAS, however only 78 subjects (Cenegermin, n=40; Vehicle, n=38) are analyzed in this table due to the presence of missing values.

[85] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Daily Activities) - Week 16
Comparison groups	Cenegermin v Vehicle

Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[86]
P-value	= 0.459 ^[87]
Method	Wilcoxon (Mann-Whitney)

Notes:

[86] - 84 subjects are included in the FAS, however only 78 subjects (Cenegermin, n=41; Vehicle, n=37) are analyzed in this table due to the presence of missing values.

[87] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Emotional Impact due to Dry Eye) - Week 4
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[88]
P-value	= 0.192 ^[89]
Method	t-test, 2-sided

Notes:

[88] - 84 subjects are included in the FAS, however only 82 subjects (Cenegermin, n=43; Vehicle, n=39) are analyzed in this table due to the presence of missing values.

[89] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Emotional Impact due to Dry Eye) - Week 8
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[90]
P-value	= 0.568 ^[91]
Method	t-test, 2-sided

Notes:

[90] - 84 subjects are included in the FAS, however only 78 subjects (Cenegermin, n=40; Vehicle, n=38) are analyzed in this table due to the presence of missing values.

[91] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Emotional Impact due to Dry Eye) - Week 12
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[92]
P-value	= 0.871 ^[93]
Method	Wilcoxon (Mann-Whitney)

Notes:

[92] - 84 subjects are included in the FAS, however only 79 subjects (Cenegermin, n=40; Vehicle, n=39) are analyzed in this table due to the presence of missing values.

[93] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Emotional Impact due to Dry Eye) - Week 16
Comparison groups	Cenegermin v Vehicle

Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[94]
P-value	= 0.85 ^[95]
Method	t-test, 2-sided

Notes:

[94] - 84 subjects are included in the FAS, however only 79 subjects (Cenegermin, n=41; Vehicle, n=38) are analyzed in this table due to the presence of missing values.

[95] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Work due to Dry Eye) - Week 4
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[96]
P-value	= 0.364 ^[97]
Method	Wilcoxon (Mann-Whitney)

Notes:

[96] - 84 subjects are included in the FAS, however only 49 subjects (Cenegermin, n=27; Vehicle, n=22) are analyzed in this table due to the presence of missing values.

[97] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Work due to Dry Eye) - Week 8
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[98]
P-value	= 0.646 ^[99]
Method	Wilcoxon (Mann-Whitney)

Notes:

[98] - 84 subjects are included in the FAS, however only 49 subjects (Cenegermin, n=28; Vehicle, n=21) are analyzed in this table due to the presence of missing values.

[99] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Work due to Dry Eye) - Week 12
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[100]
P-value	= 0.739 ^[101]
Method	Wilcoxon (Mann-Whitney)

Notes:

[100] - 84 subjects are included in the FAS, however only 49 subjects (Cenegermin, n=27; Vehicle, n=22) are analyzed in this table due to the presence of missing values.

[101] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	QoL (Impact on Work due to Dry Eye) - Week 16
Comparison groups	Cenegermin v Vehicle

Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[102]
P-value	= 0.664 ^[103]
Method	Wilcoxon (Mann-Whitney)

Notes:

[102] - 84 subjects are included in the FAS, however only 50 subjects (Cenegermin, n=28; Vehicle, n=22) are analyzed in this table due to the presence of missing values.

[103] - Not statistically significant result. p-value corresponds to a non-parametric Mann-Whitney-Wilcoxon (Wilcoxon rank sum) test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	TS (Satisfaction with Effectiveness) - Week 4
Comparison groups	Vehicle v Cenegermin
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[104]
P-value	= 0.846 ^[105]
Method	t-test, 2-sided

Notes:

[104] - 84 subjects are included in the FAS, however only 78 subjects (Cenegermin, n=42; Vehicle, n=36) are analyzed in this table due to the presence of missing values.

[105] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	TS (Satisfaction with Effectiveness) - Week 8
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[106]
P-value	= 0.248 ^[107]
Method	t-test, 2-sided

Notes:

[106] - 84 subjects are included in the FAS, however only 76 subjects (Cenegermin, n=39; Vehicle, n=37) are analyzed in this table due to the presence of missing values.

[107] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	TS (Satisfaction with Effectiveness) - Week 12
Comparison groups	Cenegermin v Vehicle
Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[108]
P-value	= 0.341 ^[109]
Method	t-test, 2-sided

Notes:

[108] - 84 subjects are included in the FAS, however only 77 subjects (Cenegermin, n=39; Vehicle, n=38) are analyzed in this table due to the presence of missing values.

[109] - Not statistically significant result. p-value corresponds to a two sample (independent group) t-test of the comparisons between Cenegermin and Vehicle in all patients.

Statistical analysis title	TS (Satisfaction with Effectiveness) - Week 16
Comparison groups	Cenegermin v Vehicle

Number of subjects included in analysis	84
Analysis specification	Pre-specified
Analysis type	superiority ^[110]
P-value	= 0.413 ^[111]

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Following study ICF signature, at each visit, after the patient had the opportunity to spontaneously mention any problems, the Investigator or appropriate designee inquired about AEs.

Adverse event reporting additional description:

All AEs were followed-up to determine outcome of the reaction. All ADRs and SAEs ongoing at the time the patient's study participation ended were evaluated within 10 days after the final visit. After this period, all unresolved ADRs and SAEs were reported as "ongoing" in the eCRF.

Reporting groups

Reporting group title	Cenegermin
-----------------------	------------

Reporting group description:

Cenegermin (rhNGF 20 mcg/mL)

Reporting group title	Vehicle
-----------------------	---------

Reporting group description:

Placebo vehicle (Vehicle vials). Out of the 41 patients enrolled in the study and assigned to the vehicle treatment group, one patient did not receive any dose of study medication and was therefore excluded from the SAF and FAS populations. Thus, results are reported for the 40 patients in the vehicle group who received treatment.

Serious adverse events	Cenegermin	Vehicle	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 44 (0.00%)	0 / 40 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	

Frequency threshold for reporting non-serious adverse events: 4.5 %

Non-serious adverse events	Cenegermin	Vehicle	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	27 / 44 (61.36%)	18 / 40 (45.00%)	
Investigations

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 October 2021	Amendment 1 (US specific): The purpose of this amendment was to include changes in order to align the Protocol to the version submitted in Italy. Furthermore, minor changes to correct some typos were made.
10 December 2021	Amendment 1 (Italy specific): The purpose of this amendment was to fulfil the requests reported in the AIFA's 'Review Comments' letter dated December 10, 2021.
02 February 2022	Amendment 2: The 'track changes' version highlights the differences from Protocol version 2.0 US Specific to Protocol version 4.0. The purpose of this amendment was to align version numbers as Protocol NGF0221 EU (Version 3.0 Italy specific) and Protocol NGF0221 US (version 2.0 US specific) and to add the study name (PROTEGO-2). Some changes were implemented after specific requests from the Italian Health authorities. Furthermore, minor changes to better explain the study design and to correct some typos were made.
08 February 2022	Amendment 3: The 'track changes' version highlights the differences from Protocol Version No. 3 Italy Specific to Protocol version 4.0. The purpose of this amendment was to align version numbers as Protocol NGF0221 EU (Version 3.0 Italy specific) and Protocol NGF0221 US (version 2.0 US specific) and to add the study name (PROTEGO-2). Furthermore, minor changes to better explain the study design and to correct some typos were made.
16 June 2022	<p>Amendment 4: The purpose of this amendment was to update protocol NGF0221 to shift the key secondary endpoint of SANDE global score to the co-primary endpoint to satisfy the FDA's request. The proposed change aligned with one of the other Phase 3 studies, NGF0121 (PROTEGO-1) – "A 4- week, Phase 3, multicenter, double-masked, vehicle-controlled clinical study to evaluate safety and efficacy of Oxervate (cenegermin) 20 mcg/mL ophthalmic solution versus vehicle, in patients with severe Sjogren's dry eye disease". NGF0121 and NGF0221 were already approved by AIFA and EC/IRB and were then ongoing.</p> <p>Below is the list of substantial revisions made in the Protocol:</p> <ul style="list-style-type: none">• Added co-primary efficacy endpoint: change from baseline in SANDE global score at Week 12. (Shifted from secondary to co-primary endpoint) <p>Consequently,</p> <ul style="list-style-type: none">• An increase in the sample size from 48 to 80 enrolled patients with a 10% dropout rate resulted in an increase in eligible patients from 42 to 72 patients.• Update to statistical methods to incorporate the above-listed modification. <p>Furthermore, minor changes to correct some typographical errors were made.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Patients had severe DED and persistent symptoms despite receiving topical CsA. The vehicle response could be due to a lubricating vehicle's effect or a variable response in patients with episodic flare-ups. Also, the treatment duration was short.

Notes:
