

## Clinical trial results:

### A Randomized, Double-blind, Phase 3 Study to Evaluate Safety, Reactogenicity, and Immunogenicity of Co-administration of Ad26. COV2.S and Influenza Vaccines in Healthy Adults 18 Years of Age and Older

#### Summary

EudraCT number	2021-003953-43
Trial protocol	PL BE
Global end of trial date	15 November 2022

#### Results information

Result version number	v2 (current)
This version publication date	01 February 2024
First version publication date	01 December 2023
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	VAC31518COV3005
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05091307
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen Vaccines & Prevention B.V.
Sponsor organisation address	Archimedesweg 4-6, CN Leiden, Netherlands, 2333
Public contact	Clinical Registry Group, Janssen Vaccines & Prevention B.V., ClinicalTrialsEU@its.jnj.com
Scientific contact	Clinical Registry Group, Janssen Vaccines & Prevention B.V., ClinicalTrialsEU@its.jnj.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 November 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 November 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this trial was to demonstrate the non-inferiority (NI) of the humoral immune response of the 4 influenza vaccine strains after concomitant administration of the Ad26.COV2.S vaccine and a seasonal quadrivalent standard-dose influenza vaccine versus the administration of a seasonal quadrivalent standard-dose influenza vaccine administered alone; and to demonstrate the NI of the binding antibody response after concomitant administration of Ad26.COV2.S vaccine and a seasonal quadrivalent standard-dose influenza vaccine versus the administration of Ad26.COV2.S vaccine administered alone.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practice and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 99
Country: Number of subjects enrolled	Poland: 114
Country: Number of subjects enrolled	United States: 648
Worldwide total number of subjects	861
EEA total number of subjects	213

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	674
From 65 to 84 years	186
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 861 subjects were enrolled, of which 715 subjects completed the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Group 1: Ad26.COVS.S + Q SD Influenza Vaccine and Placebo

Arm description:

Subjects aged greater than or equal to ( $\geq$ ) 18 years and older received a single intramuscular (IM) injection of Ad26.COVS.S at  $5 \times 10^{10}$  viral particles (vp) dose level and a seasonal quadrivalent (Q) standard dose (SD) influenza vaccine with 60 micrograms (mcg) hemagglutinin (HA) on Day 1 followed by a single IM injection of placebo (matched to Ad26.COVS.S) on Day 29.

Arm type	Experimental
Investigational medicinal product name	Ad26.COVS.S
Investigational medicinal product code	
Other name	VAC31518; JNJ-78436735
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of Ad26.COVS.S at  $5 \times 10^{10}$  vp dose level on Day 1.

Investigational medicinal product name	Q SD influenza vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a Q SD influenza vaccine with 60 mcg HA on Day 1.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of placebo (matched to Ad26.COVS.S) on Day 29.

<b>Arm title</b>	Group 2: Placebo + Q SD Influenza Vaccine and Ad26.COVS.S
------------------	---

Arm description:

Subjects aged  $\geq 18$  years and older received a single IM injection of placebo (matched to Ad26.COVS.S) and a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1 followed by a single IM injection of Ad26.COVS.S at  $5 \times 10^{10}$  vp dose level on Day 29.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a single dose of placebo (matched to Ad26.COV2.S) on Day 1.

Investigational medicinal product name	Q SD influenza vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1

Investigational medicinal product name	Ad26.COV2.S
Investigational medicinal product code	
Other name	VAC31518; JNJ-78436735
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a single dose of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

<b>Arm title</b>	Group 3: Ad26.COV2.S + Q HD Influenza Vaccine and Placebo
------------------	---

Arm description:

Subjects aged  $\geq 65$  years and older received a single IM injection of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level and a seasonal Q high dose (HD) influenza vaccine with 240 mcg HA on Day 1 followed by a single IM injection of placebo (matched to Ad26.COV2.S) on Day 29.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of placebo (matched to Ad26.COV2.S) on Day 29.

Investigational medicinal product name	Ad26.COV2.S
Investigational medicinal product code	
Other name	VAC31518; JNJ-78436735
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 1.

Investigational medicinal product name	Q HD influenza vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a seasonal Q HD influenza vaccine with 240 mcg HA on Day 1.

<b>Arm title</b>	Group 4: Placebo + Q HD Influenza Vaccine and Ad26.COV2.S
------------------	---

Arm description:

Subjects aged  $\geq 65$  years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q HD influenza vaccine with 240 mcg of HA on Day 1 followed by a single

of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of placebo (matched to Ad26.COV2.S) on Day 1.

Investigational medicinal product name	Q HD influenza vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a seasonal Q HD influenza vaccine with 240 mcg of HA on Day 1.

Investigational medicinal product name	Ad26.COV2.S
Investigational medicinal product code	
Other name	VAC31518; JNJ-78436735
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a single dose of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

## End points

### End points reporting groups

Reporting group title	Group 1: Ad26.COV2.S + Q SD Influenza Vaccine and Placebo
Reporting group description: Subjects aged greater than or equal to ( $\geq$ ) 18 years and older received a single intramuscular (IM) injection of Ad26.COV2.S at $5 \times 10^{10}$ viral particles (vp) dose level and a seasonal quadrivalent (Q) standard dose (SD) influenza vaccine with 60 micrograms (mcg) hemagglutinin (HA) on Day 1 followed by a single IM injection of placebo (matched to Ad26.COV2.S) on Day 29.	
Reporting group title	Group 2: Placebo + Q SD Influenza Vaccine and Ad26.COV2.S
Reporting group description: Subjects aged $\geq 18$ years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1 followed by a single IM injection of Ad26.COV2.S at $5 \times 10^{10}$ vp dose level on Day 29.	
Reporting group title	Group 3: Ad26.COV2.S + Q HD Influenza Vaccine and Placebo
Reporting group description: Subjects aged $\geq 65$ years and older received a single IM injection of Ad26.COV2.S at $5 \times 10^{10}$ vp dose level and a seasonal Q high dose (HD) influenza vaccine with 240 mcg HA on Day 1 followed by a single IM injection of placebo (matched to Ad26.COV2.S) on Day 29.	
Reporting group title	Group 4: Placebo + Q HD Influenza Vaccine and Ad26.COV2.S
Reporting group description: Subjects aged $\geq 65$ years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q HD influenza vaccine with 240 mcg of HA on Day 1 followed by a single IM injection of Ad26.COV2.S at $5 \times 10^{10}$ vp dose level on Day 29.	

### Primary: Groups 1 and 2: Geometric Mean Titers (GMTs) of Hemagglutination Inhibition (HI) Antibodies Against Each of the Four Influenza Vaccine Strains 28 Days after the Administration of a Seasonal Quadrivalent Standard-dose Influenza Vaccine

End point title	Groups 1 and 2: Geometric Mean Titers (GMTs) of Hemagglutination Inhibition (HI) Antibodies Against Each of the Four Influenza Vaccine Strains 28 Days after the Administration of a Seasonal Quadrivalent Standard-dose Influenza Vaccine <sup>[1]</sup>
End point description: GMTs of HI antibodies were measured using hemagglutination inhibition (HAI) assay against each of four influenza vaccine strains (A/Victoria [H1N1], A/Cambodia [H3N2], B/Victoria [B/Victoria] and B/Phuket [B/Yamagata]). This endpoint was planned to be analysed for specified arms only. The per-protocol influenza immunogenicity (PPII) set included all randomised subjects who received Ad26.COV2.S vaccine in combination with seasonal influenza vaccine for co-administration group and those who received seasonal influenza vaccine alone for control group, for whom immunogenicity data were available for at least one of influenza strains in vaccine. Subjects with major protocol deviation were excluded from PPII analysis. 'N' (number of subjects analysed)=subjects who were evaluable for this endpoint.	
End point type	Primary
End point timeframe: 28 days after vaccination with seasonal quadrivalent standard-dose influenza vaccine (Day 29)	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This outcome measure was planned to be analysed for specified arm only.

**Primary: Groups 1 and 2: Geometric Mean Concentrations (GMCs) of Antibodies Measured by Spiked-Enzyme-linked Immunosorbent Assay (S-ELISA) 28 Days After Administration of Ad26.COV2.S Vaccine**

End point title	Groups 1 and 2: Geometric Mean Concentrations (GMCs) of Antibodies Measured by Spiked-Enzyme-linked Immunosorbent Assay (S-ELISA) 28 Days After Administration of Ad26.COV2.S Vaccine <sup>[2]</sup>
-----------------	--

End point description:

GMCs of antibody titers measured by S-ELISA at 28 days after administration of Ad26.COV2.S vaccine was reported. This endpoint was planned to be analysed for specified arms only. Seronegative subjects (at Day 1) who became serology positive during the study, subjects with positive molecular test for severe acute respiratory syndrome coronavirus 2 (SARSCoV-2) and major protocol deviation were excluded from PPSI analysis. The per protocol SARS-CoV-2 immunogenicity set (PPSI) included all randomised subjects who received Ad26.COV2.S vaccine in combination with seasonal influenza vaccine for co-administration group and Ad26.COV2.S vaccine alone for control group, and for whom immunogenicity data was available. Here, 'N' (number of subjects analysed) signifies subjects who were evaluable for this endpoint.

End point type	Primary

### Secondary: Number of Subjects With Medically-attended Adverse Events (MAAEs)

End point title	Number of Subjects With Medically-attended Adverse Events (MAAEs)
End point description:	
Number of subjects with MAAEs was reported. MAAEs were defined as AEs with medically-attended visits including hospital, emergency room, urgent care clinic, or other visits to or from medical personnel for any reason. New onset of chronic diseases was collected as part of the MAAEs. The FAS included all randomised subjects with at least 1 documented study vaccine administration.	
End point type	Secondary
End point timeframe:	
From Day 1 (post-vaccination) to end of the study (up to 12.5 months)	

End point values	Group 1: Ad26.COVS.S + Q SD Influenza Vaccine and	Group 2: Placebo + Q SD Influenza Vaccine and Ad26.COVS.S	Group 3: Ad26.COVS.S + Q HD Influenza Vaccine and	Group 4: Placebo + Q HD Influenza Vaccine and Ad26.COVS.S

### Secondary: Number of Subjects With Serious Adverse Events (SAEs)

End point title	Number of Subjects With Serious Adverse Events (SAEs)
End point description:	
An AE was any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product. An AE does not necessarily have a causal relationship with the intervention. SAE was any untoward medical occurrence that at any dose results in any of the following outcomes: death; initial or prolonged inpatient hospitalization; life-threatening experience	

(immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly/birth defect; suspected transmission of any infectious agent via a medicinal product or medically important. The FAS included all randomised subjects with at least 1 documented study vaccine administration.

End point type	Secondary

## Secondary: Number of Subjects With Adverse Events of Special Interest (AESIs)

End point title	Number of Subjects With Adverse Events of Special Interest (AESIs)
End point description: Number of subjects with AESIs was reported. AESIs were significant AEs that were judged to be of special interest because of clinical importance, known or suspected class effects, or based on nonclinical signals. Thrombosis with Thrombocytopenia Syndrome (TTS), a syndrome characterised by a combination of both a thrombotic event and thrombocytopenia, was considered to be an AESI in this study. A suspected TTS case was defined as: Thrombotic events: suspected deep vessel venous or arterial thrombotic events; Thrombocytopenia, defined as platelet count below 150,000/microliter. The FAS included all randomised subjects with at least 1 documented study vaccine administration.	
End point type	Secondary
End point timeframe: From Day 1 (post-vaccination) to end of the study (up to 12.5 months)

### Reporting groups

Reporting group title	Group 1: Ad26.COV2.S + Q SD Influenza Vaccine and Placebo
-----------------------	---

Reporting group description:

Subjects aged greater than or equal to ( $\geq$ ) 18 years and older received a single intramuscular (IM) injection of Ad26.COV2.S at  $5 \times 10^{10}$  viral particles (vp) dose level and a seasonal quadrivalent (Q) standard dose (SD) influenza vaccine with 60 micrograms (mcg) hemagglutinin (HA) on Day 1 followed by a single IM injection of placebo (matched to Ad26.COV2.S) on Day 29.

Reporting group title	Group 4: Placebo + Q HD Influenza Vaccine and Ad26.COV2.S
-----------------------	---

Reporting group description:

Subjects aged  $\geq 18$  years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1 followed by a single IM injection of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

Reporting group title	Group 3: Ad26.COV2.S + Q HD Influenza Vaccine and Placebo
-----------------------	---

Reporting group description:

Subjects aged  $\geq 18$  years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1 followed by a single IM injection of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

Reporting group title	Group 2: Placebo + Q SD Influenza Vaccine and Ad26.COV2.S
-----------------------	---

Reporting group description:

Subjects aged  $\geq 18$  years and older received a single IM injection of placebo (matched to Ad26.COV2.S) and a seasonal Q SD influenza vaccine with 60 mcg of HA on Day 1 followed by a single IM injection of Ad26.COV2.S at  $5 \times 10^{10}$  vp dose level on Day 29.

occurrences (all)	42		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 February 2022	The purpose of this amendment was to perform a descriptive analysis for the high-dose regimen instead, because it was unlikely that enough subjects greater than or equal to ( $\geq$ )65 years of age could be recruited in time before the end of the influenza season to power the non-inferiority hypothesis testing.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
