Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 November 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 September 2023
Global end of trial reached?	Yes
Global end of trial date	30 November 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To compare the immune response between treatment arms after a 3rd (Part A) or 4th (Part B) vaccination dose against SARS-CoV-2.

Due to the extensive roll-out of COVID-19 booster campaigns throughout Europe and poor recruitment rate as a consequence, Part A of the trial (3rd COVID-19 vaccination) was closed to further enrolment as of 13 January 2022. Part B of the trial (4th COVID-19 vaccination) was introduced as of 21 January 2022. New COVID-19 vaccines targeting Omicron BA.1 and Omicron BA.4/BA.5 have been approved in September 2022 by the European Commission. Variant-adapted COVID-19 vaccines were rolled out in multiple countries as part of national booster campaigns. The EU-COVAT-1_AGED trial included BNT162b2 and mRNA-1273 as nonvariant adapted vaccines as IMP for booster vaccination. Recruitment was consequently prematurely terminated, thus all analyses should be considered as exploratory (pre-specified and post-hoc).

Protection of trial subjects:

Protection measures of the subjects are summarised in the following, subjects were healthy volunteers with regard to the condition against they were vaccinated:

- An independent DMC was established to review efficacy and safety data, e.g. SAEs/SUSARs, and their impact on the benefit-risk assessment for the subjects. DMC gave recommendations on continuation, modification or early termination of the clinical trial considering particularly safety aspects, but also recruitment and potential superiority of specific treatment arms.
- Continuous sponsor assessment of SAEs, assuring an ongoing evaluation and medical review of the SAEs and to evaluate SAEs regarding their seriousness, causality and expectedness.
- An independent Medical Monitor was involved. Tasks of the Medical Monitor included periodic per subject and cumulative reviews of the accumulating safety data including a review of (S)AE, overdose and laboratory data (as applicable), medical review of specified clinical data to ensure completeness, consistency and medical sense, and review of medically related protocol deviations. The Medical Monitor was further involved in all correspondence addressed to the sponsor's assessors in order to ensure a comprehensive medical surveillance by the Medical Monitor and immediate awareness of all SAEs including the SAE assessment and medical review information by the sponsor.
- SAE tracking tables which documented all received and processed SAEs (initial and follow-up SAE reports) were transmitted to the sponsor assessors, the Medical Monitor and the DMC members by safety management on a monthly basis.

Background therapy:

Not applicable in a vaccination trial.

Evidence for comparator:

The present vaccination trial is a head-to-head comparison of two anti SARS-CoV-2 vaccines which had received marketing authorisation during the COVID-19 pandemic. There was no control arm without vaccination.

Actual start date of recruitment	02 November 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 50
Country: Number of subjects enrolled	Spain: 87
Country: Number of subjects enrolled	Germany: 132
Country: Number of subjects enrolled	Lithuania: 1
Worldwide total number of subjects	270
EEA total number of subjects	270

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	206
85 years and over	64

Subject disposition

Recruitment

Recruitment details:

Part A (3rd vaccination): n=53. First subject enrolled: 08 Nov 2021; last subject completed: 03 Jan 2023. One active trial site.

Part B (4th vaccination): n=270. First subject enrolled: 16 Feb 2022; last subject completed: 13 Sep 2023. 9 active trial sites (4 countries).

This report exclusively covers Part B. Part A results can be requested.

Pre-assignment

Screening details:

Not applicable in this trial.

Period 1

Period 1 title	Overall trial (Part B) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	BNT162b2

Arm description:

BNT162b2 (Comirnaty®) was administered as 2nd COVID-19 booster dose (4th vaccination in total). It contains 30 µg of tozinameran (0.3 mL after dilution) as approved for individuals ≥12 years by the European Commission.

Arm type	Active comparator
Investigational medicinal product name	BNT162b2
Investigational medicinal product code	J07BX
Other name	Comirnaty®
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Dosage: 30 µg (0.3 mL after dilution)

Administration details: Intramuscular injection

Arm title	mRNA-1273
------------------	-----------

Arm description:

mRNA-1273 (Spikevax®) was administered as 2nd COVID-19 booster dose (4th vaccination in total). It contains 100 µg (0.5 mL after dilution).

Arm type	Active comparator
Investigational medicinal product name	mRNA-1273
Investigational medicinal product code	J07BX03
Other name	Spikevax®
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Dosage: 100 µg (0.5 mL after dilution)

Administration details: Intramuscular injection

Primary: Antibody Titre Increase 14 Days After 4th Vaccination Dose

End point title	Antibody Titre Increase 14 Days After 4th Vaccination Dose ^[1]
-----------------	---

End point description:

Rate of 2-fold antibody titre increase 14 days after 4th vaccination dose measured by qualitative enzyme-linked immunosorbent assay (Anti-RBD-ELISA) against wildtype virus.

Because the trial was terminated before the initial target sample size was reached, only confidence intervals for the rates per group are reported. All analyses should be considered as exploratory (pre-specified and post-hoc) due to the premature termination.

Descriptive analysis:

In the BNT162b2 group 102/130 (78.5%) [97.5% CI: 69.2% - 86%] subjects showed a two-fold increase in anti-RBD IgG titres at 14 days after 4th dose compared to 116/133 (87.2%) [97.5% CI: 79.3% - 93%] subjects in the mRNA-1273 group. All primary analyses were performed on the mITT population set.

All trial data (Part A and B) will be shared upon request as per FAIR principles.

End point type	Primary
----------------	---------

End point timeframe:

From Day 0 until Day 14

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Because the trial was terminated before the initial target sample size was reached, only confidence intervals for the rates per group are reported. All analyses should be considered as exploratory (pre-specified and post-hoc) due to the premature termination.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 December 2021	The main changes concerned the protocol (CTP V04) in which the visit schedule was simplified and the number of visits reduced. The revision of the visit schedule also included a designated process presentation for obtaining a GCP-compliant informed consent prior to the initiation of study-relevant measures.
21 January 2022	The main changes concerned the protocol (CTP V05) and the associated synopsis due to the introduction of a fourth instead of a third vaccination dose. In addition to changes to the content, the wording of the protocol was clarified in some passages. Editorial changes were also made.
17 August 2022	The main changes concerned the protocol (CTP V06) and the associated synopsis. In addition to a few content-related changes, the wording of the protocol has been the wording was clarified and editorial adjustments were made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
