

Clinical trial results:

A Phase 2b, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of MK-0616 in Adults With Hypercholesterolemia

Summary

EudraCT number	2021-005221-24
Trial protocol	DE NO
Global end of trial date	28 November 2022

Results information

Result version number	v1 (current)
This version publication date	01 December 2023
First version publication date	01 December 2023

Trial information

Trial identification

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 November 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 November 2022
Global end of trial reached?	Yes
Global end of trial date	28 November 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the efficacy and safety of MK-0616, an oral PCSK9 inhibitor, in lowering low-density lipoprotein cholesterol (LDL-C) in participants with hypercholesterolemia. The primary hypothesis is that at least one of the four doses of MK-0616 tested in this study is superior to placebo on percent change from baseline in LDL-C at Week 8.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 March 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Japan: 42
Country: Number of subjects enrolled	Mexico: 119
Country: Number of subjects enrolled	Norway: 21
Country: Number of subjects enrolled	Korea, Republic of: 19
Country: Number of subjects enrolled	Turkey: 9
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	United States: 138
Worldwide total number of subjects	381
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	223
From 65 to 84 years	158
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Of 668 participants screened for inclusion, 381 were randomized 1:1:1:1:1 to receive MK-0616 6 mg, 12 mg, 18 mg, 30 mg, or placebo. Of the 381 randomized participants, one participant did not receive at least one dose of study intervention.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	MK-0616 6 mg

Arm description:

Participants received 6 mg of MK-0616 orally once daily (QD) for 8 weeks

Arm type	Experimental
Investigational medicinal product name	MK-0616
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

6 mg MK-0616 was administered orally in capsule form for up to 8 weeks.

Arm title	MK-0616 12 mg
------------------	---------------

Arm description:

Participants received 12 mg of MK-0616 orally QD for 8 weeks

Arm type	Experimental
Investigational medicinal product name	MK-0616
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

12 mg MK-0616 was administered orally in capsule form for up to 8 weeks.

Arm title	MK-0616 18 mg
------------------	---------------

Arm description:

Participants received 18 mg of MK-0616 orally QD for 8 weeks

Arm type	Experimental
Investigational medicinal product name	MK-0616
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

18 mg MK-0616 was administered orally in capsule form for up to 8 weeks.

Arm title	MK-0616 30 mg
Arm description:	
Participants received 30 mg of MK-0616 orally QD for 8 weeks	
Arm type	Experimental
Investigational medicinal product name	MK-0616
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

30 mg MK-0616 was administered orally in capsule form for up to 8 weeks.

Arm title	Placebo
Arm description:	
Participants received MK-0616-matching placebo orally QD for 8 weeks	
Arm type	Placebo
Investigational medicinal product name	Placebo to MK-0616
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

MK-0616 matching placebo was administered orally in capsule form for up to 8 weeks.

Primary: Percent Change from Baseline in Low-density Lipoprotein Cholesterol (LDL-C) at Week 8

End point title	Percent Change from Baseline in Low-density Lipoprotein Cholesterol (LDL-C) at Week 8
End point description:	
Blood samples were collected at baseline and after 8 weeks of treatment to assess mean percent change in LDL-C. Based on a constrained longitudinal analysis (cLDA) model including terms for treatment, time, baseline statin intensity, baseline renal function, and the interaction of treatment by time. The percent change from baseline in LDL-C at week 8 was reported. All randomized participants who received at least one dose of study intervention, had at least one observation for the analysis endpoint, and had baseline data were analyzed.

Statistical analyses

Statistical analysis title	Percent Change from Baseline in Non-HDL-C
----------------------------	---

Statistical analysis description:

One-sided p-value and difference in least squares means based on a cLDA model including terms for treatment, time, baseline statin intensity, baseline renal function, and the interaction of treatment by time.

Comparison groups	MK-0616 6 mg v Placebo
-------------------	------------------------

Number of subjects included in analysis	146
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	cLDA
Parameter estimate	Difference in Least Squares Means
Point estimate	-35.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-42.4
upper limit	-29.4

Secondary: Percentage of Participants with LDL-C Value at Goal at Week 8

End point title	Percentage of Participants with LDL-C Value at Goal at Week 8
-----------------	---

End point description:

LDL-C goal was defined as: LDL-C <70 mg/dL (<1.81 mmol/L) in participants with clinical atherosclerotic cardiovascular disease (ASCVD), LDL-C <100 mg/dL (<2.59 mmol/L) in participants with an ASCVD risk-equivalent and/or a 10-year risk of having an ASCVD event that is ≥7.5%, OR LDL-C <130 mg/dL (<3.37mmol/L) in participants with a 10-year risk of having an ASCVD event that is ≥5.0% and <7.5%. The percentage of participants with LDL-C value at goal at week 8 were reported. All randomized participants who received at least one dose of study intervention and had at least one observation for the analysis endpoint were analyzed.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 17 weeks

Adverse event reporting additional description:

The population analyzed for the All-Cause Mortality was all randomized participants. The population analyzed for AEs was all randomized participants who received at least one dose of study treatment, corresponding to the study treatment they actually received.

Assessment type	Systematic
